WAC 220-16-015 General definitions—Trawl gear.

(1) "Otter trawl" shall be defined as a cone or funnel-shaped net which is towed or drawn through the water by one or two vessels. Otter trawl nets may be used both on and off the seabed. Otter trawl nets may be fished with or without trawl doors, and may employ warps or cables to direct fish. Otter trawl nets are restricted to the following three categories:

(a) "Bottom trawl" means an otter trawl in which the otter boards or the footrope of the net contact the seabed, and includes Danish and Scottish seine gear.

(b) "Roller trawl" or "bobbin trawl" are identical, and mean an otter trawl with footropes equipped with rollers or bobbins made of wood, steel, rubber, plastic, or other hard material which protects the net during fishing on the seabed.

(c) "Pelagic trawl" means an otter trawl in which the otter boards may be in contact with the seabed but the footrope of the net remains above the seabed. Pelagic trawl nets may not have footropes protected at the trawl mouth with rollers, bobbins, or discs.

(2) "Beam trawl" shall be defined as a type of bottom trawl, consisting of a bag-shaped trawl net utilizing a beam to spread the mouth of the net horizontally as it is towed and not having weighted otter frames or otter doors. The minimum mesh size for beam trawl nets is four and one-half inches in a food fish fishery and one and one-half inches in a shrimp fishery, unless otherwise provided.

(3) "Shrimp trawl" shall be defined as a tapered, funnel-shaped trawl net in which the mesh size is two inches or less in the intermediate and codend sections of the trawl. Otter doors, otter boards, or a beam may be used to spread the mouth of the net horizontally as it is towed. The mouth of the net is formed on the upper edge by a line to which floats are attached (headrope) and on the lower edge by a line which is usually weighted (footrope). Additional webbing is frequently attached to the codend section to prevent the net from chafing.

(4) "Scallop dredge" shall be defined as trawl gear with a leading rigid frame opening with a trailing bag of metal rings or net mesh, which is legal gear for harvest of scallops.

WAC 220-20-040 General provisions—Rearing and planting food fish. (1)

It shall be unlawful for any person, group, corporation, association, or governmental entity to plant or release any food fish into the waters of the state of Washington without first obtaining a permit from the department of fisheries. No permit shall be issued unless the following time periods are observed, and the following information provided the department prior to planting.

(a) Thirty days prior to obtaining food fish or food fish eggs, fry, or fingerlings, or importing the same with the eventual intent to plant in the waters of the state of Washington, the person, group, corporation, association, or governmental entity so intending to plant shall provide the department information as to the source of the food fish or food fish eggs, fry, or fingerlings, species, race, and time and place for the proposed release or other disposition and the size of the food fish to be planted.

[Title 220 WAC—p. 35]

(b) Thereafter, the department shall examine the provided information and determine if a permit for the planting of the food fish should be issued. If a proposed plant presents an important conflict or competition to the established stocks in the waters to be planted, conflicts with the department's overall management plan for the waters to be planted, would cause a significant decrease in the abundance of stocks already present, or would significantly inhibit the ability to harvest existing stocks, a permit for planting shall not be issued.

(c) Thirty days prior to planting, and within ten days of the actual plant, the food fish to be released must be made available to the department for inspection for disease. If the department's representative so inspecting is not satisfied the food fish are disease-free, or otherwise in a condition specified in paragraph (b) of this regulation, the food fish shall not be released in the waters of the state, and any prior departmental approval for such planting is automatically withdrawn. The department will consider a certification by department-approved pathologists that the food fish to be released are disease-free in lieu of actual department inspection.

(d) Any person, group, corporation, association or governmental entity intending to release food fish in the waters of the state, shall report immediately to the department the outbreak of any disease among the food fish, food fish eggs, fry or fingerlings intended to be released. If such outbreak presents a threat to such fishery resource of the state, the department may immediately order such action necessary to protect the state's fisheries, including quarantine or destruction of stocks, sterilization of closures and facilities, cessation of activities, and disposal of the infected fish in a manner satisfactory to the department.

(e) No food fish covered by a permit issued under this regulation shall be branded, tattooed, tagged, fin-clipped or otherwise marked for identification without prior approval by the department.

(f) No facilities shall be constructed or operated for the purpose of food fish propagations or rearing without first obtaining a permit from the department. No permit shall be issued unless the following information is provided the department prior to beginning construction of such facility:

(i) The person, group, corporation, association, or governmental entity so intended to construct such facility shall provide the department information as to the species to be produced in the facility or otherwise affected by the facility, and a general plan of times and places for the proposed releases or other disposition and the size, age, and maturity of the food fish to be released. Functional plans for construction of such facility shall also be provided to the department.

(ii) Thereafter, the department shall examine the provided information and determine if the permit for construction of the facility shall be issued. If the proposed planting, release, or operational scheme presents an important conflict or competition to established stocks of food fish, conflicts with the department's overall management plan for the waters or areas to be planted, would cause a significant decrease in the abundance of stocks already present, or will significantly inhibit the ability to harvest existing stocks, a permit for construction will not be issued.

(iii) A permit for construction or operation of a propagation facility will be revoked if any food fish are planted, released, or otherwise disposed of by any person, group, corporation, association or governmental entity which is the holder of a construction or operation permit under this paragraph if the holder does not, prior to planting or releasing, provide the department with the additional information and secure the additional permits required by this regulation.

(g) An advisory committee of potentially affected groups will be established to provide technical input.

WAC 220-20-045 Scientific permits. (1) It shall be unlawful for any person, group, corporation, association, or governmental entity to conduct any scientific study involving the handling, collection, or release of food fish or shellfish on the beaches or in the waters of the state of Washington without first obtaining a permit from the department of fisheries, and it shall be unlawful to fail to comply with any of the provisions of the permit.

(a) A request for such a permit must be received 30 days prior to the date such study, collection, release, or research is started.

(b) Each request for a permit must be accompanied by the following information:

(i) A study title.

(ii) An introduction describing the management problems to be addressed and why resolution is necessary.

(iii) An objective(s) for the proposed project including defining an identifiable end point or conclusion toward which efforts are to be directed.

(iv) A justification which identifies the user(s) of the information and indicates how the findings will be used.

(v) A procedure which explains the approach or plan of action and which provides the organizational framework and logical sequence of events that will lead to the attainment of the study objectives.

(vi) A location of the study area.

(vii) An identification of supervisory and technical personnel responsible for the study.

(c) A final report must be submitted to the department upon completion of the study, research, collection, or release, and interim reports will be required.

(d) Permits will normally be granted for requests which increase the data base, increase or maximize the fishery resource, avoid damage to the various resources and do not unnecessarily duplicate previous research.

(e) Continuing studies or research or other scientific projects may be extended annually by concurrence of the director.

(f) An advisory committee of potentially affected groups will be established to provide technical input.

WAC 220-20-051 Vessel designation requirements.

(1) In any licensed fishery for which a vessel is required under chapter 75.28 RCW, or for any delivery of food fish or shellfish, or for any charter fishery, it is unlawful to fish for, harvest, deliver, or possess food fish or shellfish unless the licensee has designated the vessel from which the food fish or shellfish are to be taken or delivered, the department has issued a commercial license to the licensee showing the vessel so designated, and the vessel operator has the commercial license in physical possession.

(2) The following definitions apply to this section:

(a) "Documentation" means vessel documentation by the United States Coast Guard showing eligibility for fishery. Once documentation is presented as evidence of ownership it becomes the only acceptable evidence of ownership unless the vessel is remeasured, found to be less than five net tons and no longer eligible for documentation.

(b) "Initial designation" means the designation by an individual licensee of a vessel to be used in a commercial fishery, for delivery of food fish or shellfish, or for charter fishing. Designation by that licensee on additional licenses is not "initial designation," and required evidence of ownership is the same as for continuing designation.

(c) "Continuing designation" means reapplication for a commercial license with no change in vessel designation.

(3) A licensee does not have to own the vessel being designated on the license. However, each licensee initially designating a vessel, except nontransferable emergency salmon delivery licensees, and every licensee continuing designation after the fourth continuous designation must offer evidence of ownership. The following is the only acceptable evidence of ownership:

(a) For initial designation of a vessel measuring less than thirty-two feet in length, evidence of ownership may be either current state vessel registration or current documentation.

(b) For initial designation of a vessel thirty-two feet or greater in length, evidence of ownership is:

(i) Current documentation; or

(ii) Coast Guard verification that the vessel does not meet the minimum tonnage requirement for documentation (simplified admeasurement); or

(2005 Ed.)

(iii) Verification from the American Bureau of Shipping that the vessel does not meet the minimum tonnage requirement for documentation (formal admeasurement).

(c) For continuing designation of vessel less than thirty-two feet in length, evidence of ownership may be either current state vessel registration or current documentation.

(d) For continuing designation of a vessel between thirty-two and thirty-six feet in length, evidence of ownership is current state registration for vessels with state registration numbers or current documentation for documented vessels.

(e) For continuing designation of a vessel greater than thirty-six feet in length, evidence of ownership is:

(i) Current documentation; or

(ii) Coast Guard verification that the vessel does not meet the minimum tonnage requirement for documentation (simplified admeasurement); or

(iii) Verification from the American Bureau of Shipping that the vessel does not meet the minimum tonnage requirement for documentation (formal admeasurement).

(4) Every vessel designated to participate in a commercial fishery or to deliver food fish or shellfish must have the official Coast Guard documentation number, complete state registration number, or Alaska department of fish and game registration number permanently displayed in ten-inch tall numbers, or letters and numbers, of proportionate width, clearly visible from each side of the vessel. It is unlawful to participate in a commercial fishery or deliver food fish or shellfish without having such numbers displayed. This subsection does not apply to salmon guide, charter or nontransferable emergency salmon delivery licensees, or to Canadian vessels delivering under a nonlimited entry delivery license.

WAC 220-20-060 Commercial fishing license transfer—Notarization. Any person making application to transfer a commercial fishing license or charter boat angler permit must have the signature of the transferor notarized, and without notarization the department will not transfer a license or angler permit, except the department may transfer the license or angler permit of a decedent without notarization but with appropriate legal certification supporting the transfer.

WAC 220-20-065 Commercial licensing—Business organizations—Operator designation. Any person which holds a commercial fishing license or delivery license and is a business organization may designate one natural person to act on behalf of the license holder to operate a designated vessel as provided for in this section:

(1) If the business is a sole proprietorship, the designated operator must be the sole proprietor.

(2) If the business is a partnership, the designated operator must be a partner.

(3) If the business is a corporation, the designated operator must be a corporate officer.

(4) In addition to the designated operator, a license holder who is a business organization may designate up to two alternate operators.

(b) "Dishonored instrument" means a check issued to the department for purchase of a license that has been returned for any reason, including, but not limited to, insufficient funds or closed account, or a credit card transaction with the department for purchase of a license that is not approved by the entity that issued the credit card.

(c) Commercial licensees who have tendered a dishonored instrument may only replace the dishonored instrument and pay the dishonored instrument fee, and any future license purchases, by cash, certified check or money order for the subsequent two licensing years after the licensing year in which the dishonored instrument was issued.

(d) Except for commercial fishing licenses which require annual renewal in order to purchase subsequent year licenses, commercial licensees who have tendered a dishonored instrument have fifteen days from the mailing date of the notice of dishonored instrument to pay the license and dishonored instrument fee, during which period the license will remain valid if the payment is received by the department by 5:00 p.m. on the fifteenth day, or by 5:00 p.m. on the next working day if the fifteenth day falls on a weekend or holiday. If the fees are not presented within fifteen days, the license will be voided as of the date of issuance, and any recreational activities that occurred within the fifteen days will be treated as having occurred without having a valid license, tag or permit.

(b) Recreational licensees who have tendered a dishonored instrument may only replace the dishonored instrument and pay the dishonored instrument fee, and, if applicable, interest, by cash, certified check or money order.

(c) Recreational licensees who do not replace a dishonored instrument within fifteen days from the mailing date of the notice of dishonored instrument are subject to collection procedures.

WAC 220-20-080 Sale under a direct retail endorsement. It is unlawful for any fisher selling salmon, sturgeon or Dungeness crab taken by that fisher under a direct retail endorsement, or for a wholesale dealer accepting salmon, sturgeon or crab from such a fisher, to fail to comply with the requirements of this section.

(1) A direct retail endorsement will not be issued to a licensee who is other than a natural person. Applicants for the endorsement must present a letter from the county health department of the fisher's county of residence certifying that the methods used by the fisher for transport, storage and display of product meet the county and statewide standards for food service operations. If the fisher is landing product from a documented vessel, the letter may be from the county health department of the hailing port of the vessel. Additionally, applicants must present a valid food and beverage service worker's permit at the time of application, and pay the direct retail administrative cost of fifty dollars. The health department letter, permit, and administrative cost are required for each application or renewal for a direct retail endorsement.

(2) Any fisher who offers salmon, sturgeon or crab for retail sale must complete a fish receiving ticket for all salmon, sturgeon or crab aboard the harvesting vessel before the product is offered for retail sale, except if the salmon, sturgeon or crab are being offered for sale directly off the catcher vessel, the fisher may complete the ticket with an estimated number or weight. At the completion of the retail activity, the fisher who has completed a ticket with an estimated number or weight is required to enter the actual number and weight of salmon, sturgeon or crab that were sold at retail. The price shown on the fish receiving ticket must be the actual sale price of the salmon, sturgeon or crab.

(3) Any fisher selling salmon, sturgeon or crab at retail if the product is taken from an area under the quick reporting requirements of WAC 220-69-240, is required to comply with the quick reporting requirement.

(4) Sturgeon and crab offered for retail sale must be landed in the round. Salmon may be cleaned or headed but not steaked or filleted prior to landing.

(5) In order to allow inspection and sampling, each fisher offering salmon, sturgeon or crab for retail sale at any location other than the harvesting vessel or, if from the harvesting vessel, in an amount having a retail value greater than one hundred fifty dollars must notify the department eighteen hours prior to sale and identify the location of the fisher's vessel, temporary food service establishment or restaurant or other business which prepares and sells food at retail to which the fisher is selling the salmon, sturgeon or crab. The only acceptable notification is by telephone to 360-902-2936, fax to 902-2155, or e-mail to enforcement-web@dfw.wa.gov.

(6) Each fisher offering salmon, sturgeon or crab for retail sale must maintain a sequentially numbered receipt book, which receipt book contains a receipt duplicate copy, and must give each purchaser of salmon, sturgeon or crab a receipt showing the number, weight and value of salmon, sturgeon or crab sold to that purchaser. The duplicate receipts must be retained by the seller for one year.

(7) If salmon, sturgeon or crab offered for retail sale and documented on a fish receiving ticket are subsequently sold to a licensed wholesale dealer, the sale must be documented by a sale receipt, not a fish receiving ticket, and it is the

(2005 Ed.)

responsibility of the wholesale dealer to maintain the product separately, until the product is resold or processed.

(8) Violations of this section are punishable under RCW 77.15.640, Wholesale fish buying and dealing—Rules violations.

[Statutory Authority: RCW 77.12.047, 04-08-025 (Order 04-63), § 220-20-080, filed 3/29/04, effective 4/29/04; 03-05-059 (Order 03-32), § 220-20-080, filed 2/18/03, effective 3/21/03.]

WAC 220-20-110 Fish and wildlife enforcement officer relief from active duty procedure. (1) This section governs the actions required for granting relief from active duty and payment of relief from active duty benefits under RCW 77.12.264. Compliance with the procedural steps of this section is mandatory, and failure to comply with these procedures will result in a denial of benefits if payment has not begun, or a termination of payments if payments have begun.

(2) A request for relief from active duty must be filed in writing with the director, and may be filed by either the officer or the officer's representative. For purposes of this section, the officer is the "claimant."

(3) Upon receipt of the relief from active duty request, the director's office will notify the department's personnel office (the personnel office). The personnel office will review the claimant's personnel file to ascertain employment status. The personnel office will determine if a labor and industries on duty injury claim was filed and the status of that claim. If a claim was filed but was disallowed, the department will

[Title 220 WAC—p. 39]

notify the claimant that the department will not further process a request for relief from active duty until all appeal efforts on the labor and industries on duty injury claim are completed.

(4) The personnel office will respond to the claimant's request for relief from active duty and provide an information request and medical release form to be completed by the claimant and returned to the personnel office. The claimant is required to provide all information and documentation requested by the department specific to the claim. If any requested information is missing, the department will send a second request to the claimant.

(5) Upon receipt of the medical release form and required documentation, the department's labor and industries claims manager, the department's reasonable accommodation program manager, and the senior human resources consultant assigned to the enforcement program will review the information provided by the claimant. From that review, the personnel manager, or designee, will identify one or more licensed medical specialist(s) as appropriate to the independent medical examination. The medical specialist will provide to the personnel manager a current medical analysis with careful consideration of the essential mental, physical and sensory functions of a fish and wildlife officer. The department will pay for the independent medical examination, and will give due consideration for the location of the claimant's current residence. If the claimant fails to attend any scheduled medical examination or fails to comply with department directions, the request for relief from active duty may be denied.

(6) Within sixty days after the receipt of the results of the independent medical examination, the department will arrange for a panel to review the request for relief from active duty. This panel may consist of one or more licensed, qualified medical professionals, representatives of the department of labor and industries or the department of retirement systems, the department's personnel manager or designee, the assistant director for the enforcement program or designee and, at the claimant's expense, a licensed, qualified medical professional of the claimant's choosing. The department will bear the cost of convening this panel with the exception of any costs associated with the medical professional chosen by the claimant. The panel will provide a written recommendation to the director of the department. The director will make a final decision to either grant or not grant relief from active duty. The director's written decision will be provided to the claimant.

(7) If relief from active duty is granted, the department may require periodic reviews of the claimant's medical condition. Such review may include an independent medical examination. Notice of a scheduled examination will be provided via certified mail to the claimant at least thirty days prior to the scheduled exam. It is the claimant's responsibility to provide the department with the claimant's current address at all times that relief from active duty benefits are being paid. If the certified letter is returned, the claimant fails to attend any scheduled medical examination, or the claimant fails at any point to comply with department directions, the relief from active duty benefits may be discontinued. If a medical examination shows that the claimant is able to perform the essential functions of a fish and wildlife officer position, the claim-

ant will be returned to active service and the relief from active duty benefits will be discontinued.

(8) If the relief from active duty request is denied or the benefits are discontinued for any reason, the claimant may file a written appeal with the director. An appeal must include a copy of any written communication from the department regarding the discontinuance, and must describe in detail the reason the relief from active duty benefits should again be provided. In making a decision on whether to renew payment of relief from active duty benefits, the director may review any information related to the on duty injury claim and may require an independent medical examination. The director's decision is final.

(2) Applications to participate in the watchable wildlife program must be made through department license dealers. Each person participating in the watchable wildlife program will receive a vehicle use permit from the license dealer.

(3) Each person participating in the watchable wildlife program will receive a watchable wildlife decal and promotional and informational materials from the department throughout the license year. WAC 220-44-050 Coastal bottomfish catch limits. (1) It is unlawful to possess, transport through the waters of the state, or land in any Washington state port bottomfish taken from Marine Fish-Shellfish Management and Catch Reporting Areas 58B, 59A, 59B, 60A, 61, 62, or 63 in excess of the amounts or less than the minimum sizes, or in violation of any gear handling or landing requirement, established by the Pacific Fisheries Management Council and published in the *Federal Register*, Volume 66, No. 8, published January 11, 2001, except thresher shark are further restricted as provided

for in this section. Therefore, persons must consult the federal regulations, which incorporated by reference and made a part of chapter 220-44 WAC. Where rules refer to the fishery management area, that area is extended to include Washington state waters coterminous with the exclusive economic zone. A copy of the federal rules may be obtained by contacting Evan Jacoby at 360-902-2930.

(a) It is unlawful to possess, transport through the waters of the state, or land into any Washington port, walleye pollock taken with trawl gear from Marine Fish-Shellfish Management and Catch Reporting Areas 58B, 59A-1, 59A-2, 60A-1, 60A-2, 61, 62, or 63, except by trawl vessels participating in the directed Pacific whiting fishery and the directed coastal groundfish fishery.

(b) It is unlawful for trawl vessels participating in the directed Pacific whiting and/or the directed coastal groundfish fishery to land incidental catches of walleye pollock greater than forty percent of their total landing by weight, not to exceed ten thousand pounds.

(2) At the time of landing of coastal bottomfish into Washington port, the fish buyer receiving the fish is required to clearly mark on the fish receiving ticket in the space reserved for dealer's use all legally defined trawl gear aboard the vessel at the time of delivery. The three trawl gear types are: Midwater trawl, roller trawl and small foot rope trawl (foot rope less than eight inches in diameter). The notation of the gear type(s) aboard the vessel is required prior to the signing of the fish receiving ticket by the vessel representative.

(3) Vessels engaged in chartered research for National Marine Fisheries Service (NMFS) may land and sell bottomfish caught during that research without the catch being counted toward any trip or cumulative limit for the participating vessel. Vessels that have been compensated for research work by NMFS with an exempted fishing permit (EFP) to land fish as payment for such research may land and sell fish authorized under the EFP without the catch being counted toward any trip or cumulative limit for the participating vessel. Any bottomfish landed during authorized NMFS research or under the authority of a compensating EFP for past chartered research work must be reported on a separate fish receiving ticket and not included on any fish receiving ticket reporting bottomfish landed as part of any trip or cumulative limit. Bottomfish landed under the authority of NMFS research work or an EFP compensating research with fish must be clearly marked "NMFS Compensation Trip" on the fish receiving ticket in the space reserved for dealer's use. The NMFS scientist in charge must sign the fish receiving ticket in the area reserved for dealer's use if any bottomfish are landed during authorized NMFS research. If the fish are landed under the authority of an EFP as payment for research work, the EFP number must be listed in the dealer's use space.

(4) It is unlawful for an original receiver to receive whiting and whiting by-catch under the authority of an exempted fishing permit (EFP) issued by the National Marine Fisheries Service through the department unless the original receiver has entered into a signed agreement with the department specifying the responsibilities of the original receiver in conjunction with the whiting EFP fishery. Failure to comply with the terms of the agreement shall be cause to remove the orig-

inal receiver from the list of original receivers allowed to receive unsorted whiting catches from EFP vessels.

(5) It is unlawful to land thresher shark taken by any means from state and offshore waters of the Pacific Ocean north of the Washington-Oregon boundary and south of the United States-Canada boundary, and it is unlawful to land thresher shark taken south of the Washington-Oregon boundary unless each thresher shark landed is accompanied by a minimum of two swordfish.

WAC 220-44-080 Otter trawl logbook required. It shall be unlawful for any operator of otter trawl gear to fail to possess and maintain a "Washington-Oregon-California Trawl Logbook" while fishing in Coastal Marine Fish-Shellfish Management and Catch Reporting Areas 58B, 59A-1, 59A-2, 59B, 60A-1, 60A-2, 61, 62 and 63. The logbook must be kept aboard the vessel while it is fishing in the above areas, or while having fish aboard that were caught in the above areas. The vessel operator must submit the completed logbook for inspection immediately upon request by authorized department representatives. For each vessel trip, the operator shall record the vessel name and registration number, crew size, departure and return date and time, and buyers of fish landed. For each trawl tow conducted the vessel operator shall record the month and day, time gear was set and retrieved, latitude and longitude fished, depth fished, net type, target species, and estimated weight of species of fish retained. Species or species groups with trip or cumulative limits must be identified separately and cannot be recorded in combination with other species. The department's copies of completed log sheets must be submitted to the department for each month in which fishing activity occurs. The department's copies must be received within ten days following any calendar month in which fishing activity occurred, or within ten days following the termination of commercial fishing activity, whichever occurs first.

WAC 220-47-427 Puget Sound—Beach seine—Emerging commercial fishery—Eligibility—Lawful gear.

(1) The Puget Sound beach seine salmon fishery is designated as an emerging commercial fishery for which a vessel is required. An emerging commercial fishery license and an experimental fishery permit are required to participate in this fishery.

(2) The department will issue five salmon beach seine experimental fishery permits.

(3) The following is the selection process the department will use to offer a salmon beach seine experimental permit.

(a) Persons who held a salmon beach seine experimental fishery permit in the previous management year will be eligible for a permit in the current management year.

(b) The department established a pool of applicants by drawing on August 13, 2002. The pool established by this drawing will be maintained to replace any permit(s) which may be voided.

(4) Permit holders are required to participate in the salmon beach seine experimental fishery.

(a) For purposes of this section, "participation" means the holder of the salmon beach seine experimental permit being aboard the designated vessel in the open fishery area two days each week during the open fishing period.

(b) If the salmon beach seine experimental permit holder fails to participate, the salmon beach seine experimental permit issued to that fisher will be void and a new salmon beach seine experimental permit will be issued through a random drawing from the applicant pool established in 2002.

(c) The department may require proof of participation by maintaining a department approved log book or registering with state officials each day the salmon beach seine experimental permit holder participates.

(d) Persons who participate, but violate conditions of a salmon beach seine experimental permit, will have the permit voided and a new salmon beach seine experimental permit will be reissued through a random drawing from the pool of the voided permit holder.

(5) In Quilcene Bay, chum salmon may not be retained by a salmon beach seine experimental permit holder. Chum salmon in Quilcene Bay must be released alive, or, at the

direction of federal or state officials, submitted for brood-stock purposes.

(6) Any person who fails to purchase the license, fails to participate, or violates the conditions of a salmon beach seine experimental permit will have his or her name permanently withdrawn from the pools.

(7) It is unlawful to take salmon with beach seine gear that does not meet the requirements of this subsection.

(a) Beach seine salmon nets in Puget Sound shall not exceed 600 feet in length or 100 meshes in depth, or contain meshes of a size less than 3 inches or greater than 4 inches.

(b) Mesh webbing must be constructed with a twine size no smaller than 210/30d nylon, 12 thread cotton, or the equivalent diameter in any other material.

WAC 220-47-500 Limited participation salmon net fisheries. (1) When the director determines that a harvestable amount of salmon appears to be available, but that full-fleet fishing effort has an unacceptable risk of exceeding the available harvest or compromises other specific management objectives, the director may authorize a limited participation fishery in extreme terminal fishing areas in order to provide additional opportunities for net fisheries where they might not otherwise exist. Such a fishery may be authorized for experimental or developmental fisheries, fisheries necessary to refine run size data, fisheries necessary to provide biological information, or in cases where:

- (a) Other specific management objectives have been stated for the species and area in question; or
- (b) There is a reasonable expectation that foregone opportunity will be claimed and the harvestable surplus cannot be carried forward to the next year of harvest; and
- (c) Full-fleet participation with time, space, or gear restrictions cannot achieve the harvest goal.

(2) Only licensed commercial salmon fishers may participate in a limited participation fishery. Only one listing is allowed per license. Fishers who wish to have their name placed on a limited participation register must mark the appropriate box on their license renewal application, or so notify the department, in writing, by July 31st. Interested fishers must provide a message phone number at which they may be contacted.

(3) Each year the department will, from the list of interested fishers, use random selection to create a priority list for gill net fishers and a priority list for purse seine fishers. Priority registers will be available for inspection at the department's Olympia office, or upon written request to the department. Once the priority lists have been created, sale or transfer of the license shall invalidate the receiver from participation in that year's limited participation fishery.

(4) The number of units of each gear type selected to participate in a limited participation fishery will reflect the most recent ratio of gear types in the full-fleet fishery directed at the species in question, except when conservation concerns, biological data collection needs, or specific management objectives dictate alternative ratios or use of a single gear type.

(5) When a limited participation fishery is authorized, the department will contact fishers from the priority register at least twenty-four hours prior to the opening of the fishery. When a fisher cannot be contacted after reasonable effort, the department will select the next name, until the maximum number of allowable units of gear is reached. If not reached, the fisher's name will remain at the priority position, but the fisher may not participate in that limited participation fishery. Agreement to participate, or declining to participate, will remove the fisher from the priority position, and place the name at the bottom of the priority list.

(6) Examples of specific management objectives include but are not limited to:

- (a) Reducing levels of incidental catch of wild salmon stocks;
- (b) Reducing incidental catch of nontarget salmon species originating from regions other than the fishing area; or
- (c) Specific recreational emphasis action.

WAC 220-49-057 Smelt fishing—Weekly periods. It is unlawful to fish for smelt for commercial purposes in Puget Sound except from 8:00 a.m. Sunday to 8:00 a.m. Friday and it is unlawful to possess smelt taken for commercial purposes during such closed period.

[Statutory Authority: RCW 75.08.080, 94-12-009 (Order 94-23), § 220-49-057, filed 5/19/94, effective 6/19/94; Order 1105, § 220-49-057, filed 12/28/73.]

WAC 220-49-063 Spawn on kelp licenses (SOK license)—Applications. (1) Any herring fisher holding a herring fishery license under RCW 75.30.140 may participate in an auction for a spawn on kelp license (SOK license). Proof of current herring licensing must be presented before entering the auction. No more than one SOK license will be awarded to each herring license holder.

(2) The department shall offer SOK licenses under the following conditions:

(a) The department shall establish a minimum acceptable bid for each license.

(b) Licenses shall be offered by sealed bidding at auction. The license will be awarded to the bidder with the highest bid. In the event of tie bids, the tie breaker will be by coin toss.

(c) Each SOK license shall be auctioned separately. Each bidder for a license must submit a certified check equal to the

minimum acceptable bid prior to the bidding as a down payment on the winning bid price.

(d) Bidding by proxy is allowed, provided the proxy holder has a power of attorney for the herring license holder represented.

(e) The successful bidder for a SOK license is required to sign and return to the department a copy of the SOK license within 10 days after the award of a license together with the balance of the bid amount. Failure to return the license and bid balance will invalidate the award of the license and result in forfeiture of the deposit in the amount necessary to compensate the department for any damages. In such case the license shall be offered to the other bidders in descending order of their bid amount.

(f) If the license fails to be sold as described in (c) or (e) of this subsection, the license may be offered to any person possessing a herring license who offers the largest amount within a specified time period.

(g) The department may revoke the SOK license for non-compliance with the terms of the license. In case of license revocation, the bid amount shall be retained by the department.

(3) Licensing:

(a) Herring dip bag net, herring drag seine, herring lampara and herring purse seine licenses are licenses required to operate the respective gear and retain herring for the spawn on kelp fishery.

(b) A spawn on kelp fishery license is the license issued to a successful bidder and allows the holder to participate in the spawn on kelp fishery.

WAC 220-49-064 Spawn on kelp license (SOK license) contract conditions. (1) Spawn on kelp license (SOK license) contracts shall protect the environment, prevent waste, ensure compliance with applicable laws and regulations, and ensure faithful performance of lease terms and conditions.

(2) SOK licensees shall not sell any spawn on kelp to anyone who is not a licensed wholesale dealer, except that the licensee may be a licensed wholesale dealer, and, after completing a state of Washington fish receiving ticket, may sell the spawn on kelp to someone who is not a wholesale dealer.

(3) SOK licenses are transferrable only in the case of hardship and then only to any person holding a herring fishery license except the SOK license is not transferable to a person currently holding a SOK license. The transfer shall be made on a form provided by the department, and the transferee shall be subject to the same terms and conditions of the original SOK license. For purposes of this section, hardship means death or disablement of the licensee or loss of the licensee's vessel through no fault of the licensee.

(4) Every SOK licensee may surrender the SOK license and shall be relieved of any obligation under the license except as otherwise provided. The licensee must notify the department in writing of intention to surrender the license. If operations under the license have been conducted, the lic-

ensee shall correct any adverse environmental effects caused by the operations, including but not limited to, release of any entrapped herring, removal of any herring enclosure, and placement of any herring spawn upon habitat suitable for hatch and release of herring fry. If the license is surrendered, the department will retain the amount of the bid.

(5) The SOK license shall provide for revocation for noncompliance with the terms of the license. Grounds for revocation for noncompliance shall include, but not be limited to, failure to provide catch records as required, failure to provide required data on fishing and harvesting related activities, and failure to notify the department of anticipated times of fishing and harvesting. The SOK licensee shall be notified, in writing, of noncompliance, the necessary corrective measures and the amount of time allowed to take corrective action. The licensee's remedying of the noncompliance within the specified time shall result in no revocation of the license. The licensee may appeal any cancellation under chapter 34.05 RCW.

(6) The SOK license contract shall allow the SOK licensee to conduct operations reasonably necessary for the production of spawn on kelp. Nothing in this section shall relieve the licensee of any responsibility under applicable laws or regulations.

(2)(a) It is unlawful to take shellfish for commercial purposes from state oyster reserves without permission of the director of fisheries.

(b) Licensing: An oyster reserve fishery license is the license required to take shellfish for commercial purposes from state oyster reserves.

(3) All geoduck and mechanical clam harvester vessels shall be issued an identification number. It is unlawful to fail to place this number in a visible location on each side of the vessel and on the top of the cabin or deck awning to be visible from the air. A sign board or banner arranged so the numbers can be seen at all times from directly overhead may be substituted if the vessel does not have a fixed roof. The numbers

shall be black on a white background and shall be not less than 18 inches high and of proportionate width.

(4) It shall be unlawful for a commercial clam digger to harvest clams from intertidal ground without having on his person a signed authorization from the registered clam farmer for whom he is harvesting. The digger will also be required to have suitable personal identification with him when engaged in clam harvesting. The authorization from the registered clam farmer must be legible, dated and must contain the date on which the authorization expires, provided that in no instance may the authorization go beyond the end of any calendar year. The authorization must additionally contain the name of each bay or area where the registered clam farmer has owned or leased ground from which the named clam digger is authorized to harvest.

WAC 220-52-018 Clams—Gear. It shall be unlawful to take, dig for or possess clams, geoducks, or mussels taken for commercial purposes from any of the tidelands in the state of Washington except with a pick, mattock, fork or shovel operated by hand, except that permits for the use of mechanical clam digging devices to take clams other than geoducks may be obtained from the director of fisheries subject to the following conditions:

(1) Any or all types of mechanical devices used in the taking or harvesting of shellfish must be approved by the director of fisheries.

(2) A separate permit shall be required for each and every device and the permit shall be attached to the specific unit at all times.

(3) All types of clams to be taken for commercial use must be of legal size and in season during the proposed operations unless otherwise provided in specially authorized permits for the transplanting of seed to growing areas or for research purposes.

(4) The holder of a permit to take shellfish from tidelands by mechanical means shall limit operations to privately owned or leased land.

(5) The taking of clams from bottoms under navigable water below the level of mean lower low water by any mechanical device shall be prohibited except as authorized by the director of fisheries. Within the enclosed bays and channels of Puget Sound, Strait of Juan de Fuca, Grays Harbor and Willapa Harbor, the operators of all mechanical devices shall confine their operations to bottoms leased from

the Washington department of natural resources, subject to the approval of the director of fisheries. The harvesting of shellfish from bottoms of the Pacific Ocean westward from the western shores of the state shall not be carried out in waters less than two fathoms deep at mean lower low water. In said waters more than two fathoms deep the director of fisheries may reserve all or certain areas thereof and prevent the taking of shellfish in any quantity from such reserves established on the ocean bottoms.

(6) Noncompliance with any part of these regulations or with special requirements of individual permits will result in immediate cancellation of and/or subsequent nonrenewal of all permits held by the operator.

(7) Applications must be made on the forms provided by the department of fisheries and permits must be in the possession of the operator before digging commences.

(8) All permits to take or harvest shellfish by mechanical means shall expire on December 31 of the year of issue.

(9) All mechanical clam harvesting machines must have approved instrumentation that will provide deck readout of water pressure.

(10) All clam harvest machines operating on intertidal grounds where less than ten percent of the substrate material is above 500 microns in size must be equipped with a propeller guard suitable for reducing the average propeller wash velocity at the end of the guard to approximately twenty-five percent of the average propeller wash velocity at the propeller. The propeller guard must also be positioned to provide an upward deflection to propeller wash.

(11) Clam harvest machines operating in fine substrate material where less than ten percent of the substrate material is above 500 microns in size, shall have a maximum harvest head width of 3 feet (overall) and the maximum pump volume as specified by the department of fisheries commensurate with the basic hydraulic relationship of 828 gpm at 30 pounds per square inch, pressure to be measured at the pump discharge.

(12) Clam harvest machines operating in coarser substrate material where more than ten percent of the substrate material is above 500 microns in size, shall have a maximum harvest head width of 4 feet (overall) and a maximum pump volume as specified by the department of fisheries commensurate with a basic hydraulic relationship of 1,252 gpm at 45 pounds per square inch, pressure to be measured at the pump discharge.

(13) All clam harvest machine operators must submit accurate performance data showing revolutions per minute, gallons per minute, and output pressure for the water pump on their machine. In addition, they shall furnish the number and sizes of the hydraulic jets on the machines. If needed, the operator shall thereafter modify the machine (install a sealed pressure relief valve) as specified by the department of fisheries to conform with values set forth in either WAC 220-52-018 (11) or (12) of this section. Thereafter, it shall be illegal to make unauthorized changes to the clam harvester water pump or the hydraulic jets. Exact description of the pump volume, maximum pressure and number and size of the hydraulic jet for each harvester machine shall be included in the department of fisheries' clam harvest permit.

(14) All clam harvest machines shall be equipped with a 3/4-inch pipe thread tap and valve that will allow rapid cou-

pling of a pressure gauge for periodic testing by enforcement personnel.

(15) Each mechanical clam harvester must have controls so arranged and situated near the operator which will allow the operator to immediately cut off the flow of water to the jet manifold without affecting the capability of the vessel to maneuver.

(16) Licensing: A hardshell clam mechanical harvester fishery license is the license required to operate the mechanical harvester gear provided for in this section.

(b) It is unlawful in the commercial harvest of geoducks for through-hull fittings for water discharge hoses connected to the harvest gear to be below the surface of the water. Any through-hull fitting connected to the harvest gear which is above the surface of the water must be visible at all times.

(3) It is unlawful to take or fish for geoduck clams taken for commercial purposes between one-half hour before official sunset or 7:00 p.m. whichever is earlier and 7:00 a.m. No geoduck harvest vessel may be on a geoduck tract or harvest area after 7:30 p.m. or before 6:30 a.m. It is unlawful to take or fish for geoduck clams on Sundays or on state holidays as defined by the office of financial management. (5) It is unlawful to possess only the siphon or neck portion of a geoduck clam aboard a geoduck harvest vessel, except when a geoduck is incidentally damaged during harvest and must be reported under a department of natural resources harvest agreement.

(6) It is unlawful to retain any food fish or shellfish other than geoduck clams during geoduck harvesting operations, except for horse clams (*Tresus capax* and *Tresus nuttallii*) when horse clam harvest is provided for under a department of natural resources harvest agreement.

(7) It is unlawful for more than two divers from any one geoduck harvest vessel to be in the water at any one time.

(8) The following documents must be on board the geoduck harvesting vessel at all times during geoduck operations:

WAC 220-52-01901 Geoduck licenses. (1) A geoduck fishery license issued by the director is required for the commercial harvest of geoduck clams. Geoduck fishery licenses were previously called "geoduck validations."

(2) Only persons holding current geoduck harvest agreements from the department of natural resources or their agents may apply for geoduck fishery licenses. An application for a geoduck fishery license must be on a form provided by the department, must be complete, and must be accompanied by a copy of the geoduck harvest agreement for which the license is sought.

(3) Each geoduck fishery license authorizes the use of two water jets or other units of geoduck harvest gear. Gear must meet the requirements of WAC 220-52-019(2). A geoduck fishery license card is a "license card" under WAC 220-69-270.

(4) The director may suspend or revoke a geoduck license used in violation of commercial diving safety regulations, including 29 C.F.R. Part 1910, Subpart T, adopted under the Occupational Safety and Health Act of 1970. The procedures of chapter 34.05 RCW apply to such suspensions or revocations. If there is a substantial probability that a violation of commercial diving safety regulations could result in death or serious physical harm to a person engaged in harvesting geoduck clams, the director may suspend the license immediately until the violation has been corrected. The direc-

tor shall not revoke a geoduck license if the holder of the harvesting agreement corrects the violation within ten days of receiving written notice of the violation.

(1) **Net fishing boats shall not have crab aboard.** It is unlawful for any vessel geared or equipped with commercial net fishing gear to have aboard any quantity of crab while it is fishing with the net gear or when it has other food fish or shellfish aboard for commercial purposes.

(2) **Area must be open to commercial crabbing.** Unless otherwise provided, it is unlawful to set, maintain, or operate any baited or unbaited shellfish pots or ring nets for taking crabs for commercial purposes in any area or at any time when the location is not opened for taking crabs for commercial purposes by permanent rule or emergency rule of the department: Provided, That following the close of a commercial crab season, permission may be granted by the director or his or her designee on a case-by-case basis for crab fishers to recover shellfish pots that were irretrievable due to extreme weather conditions at the end of the lawful opening. Crab fishers must notify and apply to department enforcement for such permission within twenty-four hours prior to the close of season.

(3) **Crabs must be male and 6-1/4 inches.** It is unlawful for any person acting for commercial purposes to take, possess, deliver, or otherwise control:

(4) **Each person and each Puget Sound license limited to 100 pots.** It is unlawful for any person to take or fish for crab for commercial purposes in the Puget Sound licensing district using, operating, or controlling any more than an aggregate total of 100 shellfish pots or ring nets. This limit shall apply to each license. However, this shall not preclude a person holding two Puget Sound crab licenses from designating and using the licenses from one vessel as authorized by RCW 77.65.130.

(5) **Additional area gear limits.** The following Marine Fish-Shellfish Management and Catch Reporting Areas are restricted in the number of pots fished, operated, or used by a person or vessel and it is unlawful for any person to use, maintain, operate, or control pots in excess of the following limits:

(a) 10 pots in Marine Fish-Shellfish Management and Catch Reporting Area 25E.

(b) 10 pots in all waters of Marine Fish-Shellfish Management and Catch Reporting Area 25A south of a line projected true west from Travis Spit on Miller Peninsula.

(c) 20 pots in that portion of Marine Fish-Shellfish Management and Catch Reporting Area 25A west of a line projected from the new Dungeness Light to the mouth of Cooper

(d) 10 pots in that portion of Marine Fish-Shellfish Management and Catch Reporting Area 23D west of a line from the eastern tip of Ediz Hook to the I77 Rayonier Dock.

(6) **Groundline gear is unlawful.** No crab pot or ring net may be attached or connected to other crab pot or ring net by a common groundline or any other means that connects crab pots together.

(7) **Puget Sound crab buoys and pots must be tagged.**

(a) In Puget Sound it is unlawful to place in the water, pull from the water, possess on the water, or transport on the water any crab buoy or crab pot without attached buoy and pot tags that meets the requirements of WAC 220-52-043.

(b) The department will issue one hundred buoy tags to the owner of each Puget Sound commercial crab fishery license upon payment of an annual buoy tag fee of one hundred dollars per license. Additional tags to replace lost tags will only be issued to owners of Puget Sound commercial crab fishery licenses who obtain, complete, and sign a declaration under penalty of perjury in the presence of an authorized department employee. The declaration shall state the number of buoy tags lost, the location and date where lost gear or tags were last observed, and the presumed cause of the loss.

(8) **Puget Sound - No person can possess or use gear with other person's tag.** In Puget Sound no person may possess, use, control, or operate any crab pot not bearing a tag identifying the pot as that person's, or any buoy not bearing tags issued by the department to that person, except that an alternate operator designated on a primary license may possess and operate crab buoys and crab pots bearing the tags of the license holder.

(9) **Cannot tamper with pot tags.** No person shall remove, damage, or otherwise tamper with crab buoy or pot tags except when lawfully applying or removing tags on the person's own buoys and pots.

(10) **Thirty-day period when it is unlawful to buy or land crab from ocean without crab vessel inspection.** It is unlawful for any fisher or wholesale dealer or buyer to land or purchase Dungeness crab taken from Grays Harbor, Willapa Bay, Columbia River, Washington coastal or adjacent waters of the Pacific Ocean during the first thirty days following the opening of a coastal crab season from any vessel which has not been issued a Washington crab vessel inspection certificate. The certificate will be issued to vessels made available for inspection in a Washington coastal port and properly licensed for commercial crab fishing if no Dungeness crabs are aboard. Inspections will be performed by authorized department personnel not earlier than twelve hours prior to the opening of the coastal crab season and during the following thirty-day period.

(11) **Grays Harbor pot limit of 200.** It is unlawful for any person to take or fish for crab for commercial purposes in Grays Harbor (catch area 60B) with more than 200 shellfish pots in the aggregate. It shall be unlawful for any group of persons using the same vessel to take or fish for crab for commercial purposes in Grays Harbor with more than 200 shellfish pots.

(12) **Coastal crab pot limit.**

(a) It is unlawful for a person to take or fish for Dungeness crab for commercial purposes in Grays Harbor, Willapa Bay, the Columbia River, or waters of the Pacific Ocean adjacent to the state of Washington unless a shellfish pot limit has been assigned to the Dungeness crab-coastal fishery license held by the person, or to the equivalent Oregon or California Dungeness crab fishery license held by the person.

(b) It is unlawful for a person to deploy or fish more shellfish pots than the number of shellfish pots assigned to the license held by that person, and it is unlawful to use any vessel other than the vessel designated on a license to operate or possess shellfish pots assigned to that license.

(c) It is unlawful for a person to take or fish for Dungeness crab or to deploy shellfish pots unless the person is in possession of valid documentation issued by the department that specifies the shellfish pot limit assigned to the license.

(13) **Determination of coastal crab pot limits.**

(a) The number of shellfish pots assigned to a Washington Dungeness crab-coastal fishery license, or to an equivalent Oregon or California Dungeness crab fishery license will be based on documented landings of Dungeness crab taken from waters of the Pacific Ocean south of the United States/Canada border and west of the Bonilla-Tatoosh line, and from coastal estuaries in the states of Washington, Oregon and California. Documented landings may be evidenced only by valid Washington state shellfish receiving tickets, or equivalent valid documents from the states of Oregon and California, that show Dungeness crab were taken between December 1, 1996, and September 16, 1999. Such documents must have been received by the respective states no later than October 15, 1999.

(b) The following criteria shall be used to determine and assign a shellfish pot limit to a Dungeness crab-coastal fishery license, or to an equivalent Oregon or California Dungeness crab fishery license:

(i) The three "qualifying coastal Dungeness crab seasons" are from December 1, 1996, through September 15, 1997, from December 1, 1997, through September 15, 1998, and from December 1, 1998, through September 15, 1999. Of the three qualifying seasons, the one with the most poundage of Dungeness crab landed on a license shall determine the crab pot limit for that license. A crab pot limit of 300 shall be assigned to a license with landings that total from zero to 35,999 pounds and a crab pot limit of 500 shall be assigned to a license with landings that total 36,000 pounds or more.

(ii) Landings of Dungeness crab made in the states of Oregon or California on valid Dungeness crab fisheries licenses during a qualifying season may be used for purposes of assigning a shellfish pot limit to a Dungeness crab fishery license, provided that documentation of the landings is provided to the department by the Oregon Department of Fish and Wildlife and/or the California Department of Fish and Game. Landings of Dungeness crab made in Washington, Oregon, and California on valid Dungeness crab fishery licenses during a qualifying season may be combined for purposes of assigning a shellfish pot limit, provided that the same vessel was named on the licenses, and the same person held the licenses. A shellfish pot limit assigned as a result of combined landings is invalidated by any subsequent split in ownership of the licenses. No vessel named on a Dungeness

crab fishery license shall be assigned more than one shellfish pot limit.

(14) **Appeals of coastal crab pot limits.** An appeal of a shellfish pot limit by a coastal commercial license holder shall be filed with the department on or before October 18, 2001. The shellfish pot limit assigned to a license by the department shall remain in effect until such time as the appeal process is concluded.

(15) **Coastal - Barging of crab pots by undesignated vessels.** It is lawful for a vessel not designated on a Dungeness crab-coastal fishery license to be used to deploy shellfish pot gear provided that:

(a) Such a vessel may not carry aboard more than 150 shellfish pots at any one time.

(b) Such a vessel may deploy shellfish pot gear only during the 64-hour period immediately preceding the season opening date and during the 48-hour period immediately following the season opening date.

(c) The lawful owner of the shellfish pot gear must be aboard the vessel when the gear is being deployed.

(16) **Coastal shellfish pot tags.** It is unlawful for a person to use a shellfish pot in the coastal Dungeness crab fishery unless the pot bears a tag that identifies either the name of the vessel being used to operate the pot or the Dungeness crab fishery license number of the owner of the pot, and the telephone number of a contact person. No person may operate or possess a pot that bears another person's tag, except that a person who is licensed as an alternate operator may operate or possess a pot that bears the tag of the primary license holder. It is unlawful for any person who is not the owner of Dungeness crab pot gear to remove, damage, or otherwise tamper with pot gear tags.

(17) **Coastal - Registration and use of buoy brands and colors.**

(a) It is unlawful for any coastal Dungeness crab fishery license holder to fish for crab unless the license holder has registered the buoy brand and buoy color(s) to be used with the license. A license holder shall be allowed to register with the department only one, unique buoy brand and one buoy color scheme per license. Persons holding more than one license state shall register buoy color(s) for each license that are distinctly different. The buoy color(s) shall be shown in a color photograph.

(b) It is unlawful for a coastal Dungeness crab fishery license holder to fish for crab using any other buoy brand or color(s) than those registered with and assigned to the license by the department.

WAC 220-52-043 Commercial crab fishery—Additional gear and license use requirements. (1) **Commercial gear limited to pots and ring nets.** It shall be unlawful to take or fish for crabs for commercial purposes except with shellfish pots and ring nets.

(2) **Commercial gear escape rings and ports defined.** It shall be unlawful to use or operate any shellfish pot gear in the commercial Dungeness crab fishery unless such gear meets the following requirements:

(a) Pot gear must have not less than two escape rings or ports not less than 4-1/4 inches inside diameter.

(b) Escape rings or ports described above must be located in the upper half of the trap.

(3) **Puget Sound commercial gear tagging requirements.**

(a) In Puget Sound, all crab pots must have a durable, nonbiodegradable tag permanently and legibly marked with the license owner's name or license number, and telephone number securely attached to the pot. If the tag information is illegible, or if the tag is lost for any reason, the pot is not in compliance with law.

(b) In Puget Sound all crab buoys must have a buoy tag issued to the license owner by the department attached to the outermost end of the buoy line. If more than one buoy is attached to a pot, only one buoy tag is required.

(4) **Puget Sound - Description of lawful buoys.** All buoys attached to commercial crab gear in Puget Sound waters must consist of a durable material and remain floating on the water's surface when five pounds of weight is attached. It is unlawful to use bleach or antifreeze bottles or any other container as a float. All buoys fished under a single license must be marked in a uniform manner using one buoy brand number registered by the license holder with the department and be of identical color or color combinations. No buoys attached to commercial crab gear in Puget Sound may be both red and white in color unless a minimum of thirty percent of the surface of each buoy is also prominently marked with an additional color or colors other than red or white, as the red and white colors are reserved for personal use crab gear as described in WAC 220-56-320 (1)(c).

(5) **Commercial crab license requirements.** In addition to, and separate from, all requirements in this chapter that govern the time, area, gear, and method for crab fishing, landing, possession, or delivery of crabs, no commercial crab fishing is allowed except when properly licensed. A person may take, fish for, land, or deliver crabs for commercial purposes in Washington or coastal waters only when the person has the license required by statute, or when the person is a properly designated alternative operator to a valid license. For Puget Sound, a person must have a "Dungeness crab - Puget Sound" fishery license provided by RCW 77.65.130. For coastal waters, such person must have a "Dungeness crab - Coastal" fishery license provided by RCW 77.65.130. To use ring nets instead of or in addition to pots, then the licensee must also have the "Crab ring net - Puget Sound" or

"Crab ring net - non-Puget Sound" license in RCW 77.65.-130. Qualifications for the limited entry licenses, requirements for designating vessels, and use of alternate operators is provided by and controlled by chapters 77.65 and 77.70 RCW.

(6) **Maximum size for coastal crab pots.** The maximum volume of a crab pot used to fish for or take Dungeness crab from the waters provided for in WAC 220-52-040(12) is thirteen cubic feet.

(7) **Incidental catch may not be retained.** It is unlawful to retain salmon, food fish, or any shellfish other than octopus that is taken incidental to any crab fishing.

WAC 220-52-050 Ocean pink shrimp trawl fishery—Coastal waters. It is unlawful to fish for, possess or deliver ocean pink shrimp taken for commercial purposes from the waters of the Exclusive Economic Zone except as provided for in this section:

(1) Ocean pink shrimp fishery:

(a) The open season for trawl gear is April 1 through October 31 of each year.

(b) The following gear is prohibited: Trawl gear having a net mesh size greater than two inches in the intermediate or codend, except for net mesh used in fish excluder devices. It is lawful to have net mesh larger than two inches in the wings or body of the trawl.

(c) It is unlawful to fish with trawl gear for pink shrimp for commercial purposes unless an approved by-catch reduction device is used in each net. Approved by-catch reduction devices are:

(i) Soft Panel By-catch Reduction Device which uses a mesh panel to guide fish out of an escape hole. An approved soft-panel must meet the following criteria:

(A) The panel must completely cover some portion of the net in cross-section, meaning it must extend completely across the full opening of the net in one continuous piece. The panel must be securely fastened to the net around the entire perimeter, such that a 110 mm diameter sphere cannot pass beyond the panel into the terminal end of the codend;

(B) The panel meshes must be constructed of netting material with individual meshes no larger than 5.5 inches, measured between opposing knots and must be constructed of a single panel of continuous netting, without zippers or other devices designed to allow disabling of the panel such that large fish can pass back into the codend;

(C) The escape hole must, when spread open, expose a hole of at least 100 square inches;

(D) The escape hole must be forward of the mesh panel and must begin within four meshes of the furthest aft point of attachment of the mesh panel to the net;

(ii) Nordmore Grate By-catch Reduction Device uses a rigid panel of narrowly spaced vertical bars to guide fish out of an escape hole in front of the panel, generally in the top of the net. An approved Nordmore grate must meet the following criteria:

(A) The exterior circumference of the rigid panel must fit completely within the interior circumference of the trawl net, such that there is no space between the panel and the net that will allow a 110 mm sphere to pass beyond the panel, into the terminal area of the codend;

(B) None of the openings between the vertical bars in the rigid panel may exceed two inches in width;

(C) The escape hole must, when spread open, expose a hole of at least 100 square inches;

(D) The escape hole must be forward of the rigid panel and must begin within four meshes of the furthest aft point of attachment of the rigid panel to the net.

(d) All by-catch reduction devices and codends used for trawl fishing for pink shrimp must be readily accessible and made available for inspection at the request of an authorized agent of the state. No trawl gear may be removed from the vessel prior to offloading of shrimp.

(e) It is unlawful to modify by-catch reduction devices in any way that interferes with their ability to allow fish to escape from the trawl, except for the purpose of testing the by-catch reduction device to measure shrimp loss. Authorized testing of by-catch reduction devices must meet the following criteria:

(i) Testing is allowed by special permit only, consistent with the terms and conditions of the permit;

(ii) For vessels fishing two nets simultaneously (double-rigged boats), only one net may contain a disabled by-catch reduction device, the other net must be fishing a fully functional by-catch reduction device as described in (c) of this subsection.

(f) Minimum number of shrimp per pound: The count per pound must average no more than 160 shrimp per pound for a minimum of two samples increasing at a rate of one sample per one thousand pounds landed or in possession up to a maximum requirement of twenty samples. Such samples shall consist of at least one pound of each of whole unbroken shrimp taken at random from throughout the individual load landed or in possession. This shall apply only to loads of 3,000 pounds of shrimp or more.

(g) Incidental catch-finfish: It is unlawful to take salmon incidental to any shrimp fishery. It is unlawful to retain any bottomfish species taken incidental to shrimp trawl fishery except as provided for in WAC 220-44-050.

(h) Incidental catch-shellfish:

(i) It is unlawful to retain any species of shellfish except that it is lawful to retain up to 50 pounds round weight of other shrimp species taken incidentally in the ocean pink shrimp fishery, or octopus or squid.

(ii) It is unlawful to fish for ocean pink shrimp within the territorial boundaries of the state.

(i) An ocean pink shrimp delivery license is the license required to operate the gear provided for in this section, and allows the operator to retain shrimp taken in the waters of the Exclusive Economic Zone.

(2) Fisheries for shrimp species other than ocean pink shrimp or ocean spot shrimp: Species other than ocean pink shrimp and ocean spot shrimp may only be taken incidentally to the ocean pink shrimp and ocean spot shrimp fisheries.

WAC 220-52-075 Shellfish harvest logs. It is unlawful for any vessel operator engaged in commercial crawfish, sea cucumber, sea urchin, scallop, shrimp other than ocean pink shrimp, squid, or sand shrimp fishing or operator of mechanical clam digging device to fail to obtain and accurately maintain the appropriate harvest log available from the Washington department of fish and wildlife. The harvest log must be kept aboard the vessel while the vessel is engaged in harvest or has crawfish, sea cucumbers, sea urchins, shrimp other than ocean pink shrimp, squid, scallops, clams, or sand shrimp aboard. The vessel operator must submit the harvest logs for inspection upon request by authorized department of fish and wildlife representatives. The department's copies of the completed harvest log must be submitted to the department for each calendar month in which fishing activity occurs. State copies must be received within ten days following any calendar month in which fishing activity occurred, except that commercial sea cucumber harvest logs must be received for each month of the season provided for in WAC 220-52-072 regardless of whether harvest activity occurred during the month, and all shellfish harvesters must submit a log that must be received by the tenth day following the ter-

mination of commercial fishing activity showing that shellfish harvest has terminated for the year.

(1) Vessel operators engaged in commercial harvest of shrimp other than Puget Sound shrimp or sand shrimp or crawfish with shellfish pot or ring net gear must record the vessel Washington department of fish and wildlife boat registration number, number of pots or ring nets pulled, date pulled, soak time, and gear location before leaving the catch area where taken, and weights must be recorded upon landing or sale.

(2) Vessel operators engaged in commercial harvest of shrimp other than ocean pink shrimp with beam trawl or shrimp trawl gear must record the vessel identity, date, location fished, trawl width, Marine Fish-Shellfish Management and Catch Reporting Area, depth fished, latitude and longitude to the nearest hundredth of a minute at the beginning of each tow, tow speed, duration of tow and estimated weight of shrimp of each species caught for each tow before leaving the site where the catch was taken or before commencing a new tow, whichever occurs first.

It shall be unlawful to fail to permanently record this information into the department-supplied harvest log before leaving each catch site. Harvest logs must be maintained and submitted in ascending consecutive order of harvest log serial numbers. Harvest logs must be submitted for each month in which fishing activity occurs and must be received by the department within ten days following any month in which fishing occurs. The fish receiving ticket serial number must be recorded onto the harvest log at the time of sale, or before leaving the last catch site of the day if the vessel operator holds a wholesale dealer license and is the original receiver of the catch.

(3) Vessel operators engaged in commercial harvest of sea urchins or sea cucumbers must record the vessel identity, date, location fished, depth fished, latitude and longitude to the nearest tenth of a minute or to the nearest second, and the approximate number of sea urchins or sea cucumbers taken before leaving the site where taken and the exact weight must be recorded upon landing or sale.

(4) Vessel operators engaged in commercial harvest of clams with mechanical digging devices must record the vessel identity, location, and date of harvest before the end of each day's fishing and the weights by clam species must be recorded upon landing or sale.

(5) Vessel operators engaged in commercial harvest of scallops must record the vessel identity, date, location, and duration of harvest and estimated weight of scallops caught for each tow or dive hour before leaving the catch area where taken.

(6) Vessel operators engaged in commercial harvest of squid, except when taken incidental to any other lawful fishery, must record before leaving the Marine Fish-Shellfish Management and Catch Reporting Area where taken, the vessel department of fish and wildlife boat registration number, gear type, catch area, starting and ending time of fishing, and numbers of other species caught and returned. Weights of squid must be recorded on landing or sale.

(7) Vessel operators engaged in commercial harvest of sand shrimp, except when taken incidental to any other lawful fishery, must record the location or identification number of the harvest tract, date of harvest, number of trenches

pumped, average length and width of trenches (yards), total number of sand shrimp retained (dozens), total number of sand shrimp sold (dozens), and the name of the sand shrimp buyer.

(8) Vessel operators engaged in commercial harvest of shrimp (other than sand shrimp) using shellfish pot gear in Puget Sound must record the vessel's Washington department of fish and wildlife boat registration number, date, number of pots pulled, pot mesh size, depth fished, soak time, gear location (including latitude and longitude to the nearest hundredth of a minute), species targeted, and weight(s) of catch before leaving the site where catch is taken. A separate weight for each species caught and retained must be recorded. When single pots are fished an entry is required for each pot site. When two or more pots are fished on a common ground line the catch site must be recorded at the location of the last pot on the ground line that is pulled. It shall be unlawful to fail to permanently record this information into the department-supplied harvest log before leaving each catch site. Harvest logs must be maintained and submitted in ascending consecutive order of harvest log serial numbers. Harvest logs must be submitted for each month in which fishing activity occurs and must be received by the department within ten days following any month in which fishing occurs. The fish receiving ticket serial number must be recorded onto the harvest log at the time of sale, or before leaving the last catch site of the day if the vessel operator holds a wholesale dealer license and is the original receiver of the catch. Vessel operators engaged in commercial harvest of shrimp from Puget Sound with shellfish pot gear must report their daily catch by telephone before leaving the last catch site fished each day. For harvest in Crustacean Management Regions 1A, 1B, 1C, or 2, reports must be made to the voice recorder at the La Conner district office. For harvest in Crustacean Management Regions 3, 4, or 6, reports must be made to the voice recorder at the Point Whitney shellfish laboratory. All reports must specify the fisher's name, estimated total number of pounds of each shrimp species in possession, number of pots fished, number of pot pulls (pots multiplied by pulls), the Marine Fish-Shellfish Management and Catch Reporting Area where shrimp were harvested, and the port or name of vessel where the catch will be landed or sold. The fish receiving ticket reporting requirements of WAC 220-69-240 remain in effect.

by formal proof an intent to continue residing in the state. This also applies to persons whose primary residence is Washington but who maintain a residence elsewhere.

(2) The primary method of establishing that the purchaser has maintained a permanent place of abode within the state for at least ninety days immediately preceding application for a license and establishing by formal evidence an intent to continue residing in the state is possession of a Washington state driver's license issued at least ninety days prior to application for a resident fishing or hunting license. (4) Persons who are too young to obtain a Washington state driver's license may use a Washington state identification card or a school identification card to establish residency and to establish by formal evidence an intent to continue residing in the state.

- (e) Documenting use of a residence address in Washington for federal tax purposes.

(6) Notwithstanding the provisions of subsections (2) and (3) of this section, a member of the armed forces stationed at a military installation in this state (other than on temporary duty), is eligible to purchase a resident fishing or hunting license after presenting a valid military identification card and evidence that the member is stationed within the state, including, but not limited to, official orders or billeting documents.

(7) Notwithstanding the provisions of this section, proof of residency and intent to continue residing within the state are satisfied by presentation of a resident fishing or hunting

license issued to the license applicant during the previous licensing year, showing the purchaser's Washington Interactive License Document (WILD) number, and verbal confirmation by the purchaser that all personal information on the previously issued license remains valid. If the applicant requests a change of any of the personal information on the license, proof of intent to continue residing in the state must be presented as provided for in subsection (2), (3), or (5) of this section.

(2) The designated harvester, when accompanied by the disabled fisher, may assist the disabled fisher in taking shellfish, game fish and food fish on behalf of the disabled fisher.

(3) It is unlawful for a designated harvester to assist a disabled fisher unless the disabled fisher is present and participating in the fishing activity; except, the disabled fisher is not required to be present at the location where the designated harvester is harvesting shellfish for the disabled person. The licensee is required to be in the direct line of sight of the designated harvester who is harvesting shellfish for him or her, unless it is not possible to be in a direct line of sight because of a physical obstruction or other barrier. WAC 220-55-105 Requirements of recreational license dealers. (1) The director may contract with persons, firms or corporations as license dealers in such numbers as deemed necessary for the purpose of issuing licenses, permits, tags, stamps and catch record cards.

(2) License dealers must have a permanent place of business with regular business hours, and have a type of business that supports hunting and fishing activities. Exceptions to this rule may be granted by the director.

(3) An internet or Interactive Voice Response (IVR) telephone firm or corporation may be designated by the director as a license dealer. Internet or IVR dealers are not required to have a type of business that supports hunting and fishing activities.

(4) All moneys collected from the sale of hand processed licenses, stamps, and other department property must be received in the department by the 10th day of the following month in which they were sold. High volume license dealers or dealers with a history of late payments may be required to remit moneys on a more frequent basis.

(5) All moneys collected from the sale of automated licenses, and other automated department property must be deposited into an electronic funds transfer account (EFT) of a type approved by the state treasurer's office where they shall be collected on a weekly basis on a schedule set by the department and the state treasurer's office.

(6) All records held pursuant to the statutes and regulations dealing with license dealers must be open to inspection by a fish and wildlife officer or department designee at reasonable times.

(7) License dealers who remit payments for hand processed licenses and other documents after the 10th of the month on more than two occasions in one year will be required to obtain a bond equal to the value of their license stock or make electronic fund transfer payment arrangements. "One year" is defined as beginning on the first month in which the license dealer is late making a payment due by the 10th of that month. A dealer who is late a third time, or sporadically thereafter, may lose their license dealership. No license dealer may receive additional license inventory if they are in arrears on license payments.

(8) For licenses sold via an automated system, license dealers must have sufficient funds in their EFT account to cover all licenses and other department property sold during the previous business week (12:01 a.m. Sunday until 11:59 p.m. Saturday) when funds are collected electronically per the announced schedule. If the amount due has not been paid on the date of the next scheduled collection from the account, the automated license terminal will be disabled and authorization to sell licenses will be withheld until all balances due have been paid. If there are insufficient funds in the account on more than three occasions in one license year, the dealer may lose their license dealership. "One license year" is defined as beginning on April 1 and ending on March 31 of the following year.

(9) License dealers using an automated licensing system are required to maintain and deposit license revenue into accounts established in banks designated as public depositories by the Public Deposit Protection Commission.

Such written permit must be affixed to or otherwise accompany the conveyance. Where regular and reoccurring transfers take place, a permit may be issued on an annual basis. Shellfish which are market ready, intended for immediate human consumption, and which will not be placed into or come in contact with state waters may be transferred without a department permit. Failure to obtain a permit or failure to affix the permit or to have the permit accompany the conveyance is punishable under RCW 77.15.350.

Existing permits may be revoked, suspended or modified upon a finding of an aquatic disease or pest or upon determination of violation of the conditions of a permit. In the event of revocation, suspension or denial of a permit, the affected party may appeal through the Administrative Procedure Act. A suspended or revoked permit will remain suspended or revoked during the appeal process. WAC

220-74-010	Purpose.
220-74-015	Surplus salmon eggs.
220-74-020	Priorities.
220-74-022	Certain sales disallowed.
220-74-025	Purchases.

WAC 220-74-010 Purpose. The purpose of this chapter shall be to establish an orderly means for the department to dispose of surplus live salmon eggs in a manner that provides optimum benefits to the citizens of the state.

All surplus salmon eggs sold pursuant to chapter 220-74 WAC shall be used in accordance with the provisions of WAC 220-20-040 through 220-20-045.

[Statutory Authority: RCW 75.08.080. 78-09-071 (Order 78-66), § 220-74-010, filed 8/25/78.]

WAC 220-74-015 Surplus salmon eggs. It is the duty of the department to preserve, protect, perpetuate and manage the food fish in the waters of the state so that the taking or other disposition of such food fish shall be at times and in a manner as will not impair the supply thereof. In a manner consistent with this conservation purpose, it is also the department's duty to seek to maintain the economic well-being and stability of the commercial fishing industry of the state. It is also the duty of the department to authorize the harvesting of salmon surplus to natural or artificial spawning requirements for the economic well-being of the citizens of the state.

[Statutory Authority: RCW 75.08.080. 78-09-071 (Order 78-66), § 220-74-015, filed 8/25/78.]

WAC 220-74-020 Priorities. (1) It is the duty of the department to assure that egg requirements for state hatcheries are satisfied. Once these requirements have been met, eggs surplus to these requirements will be provided as per RCW 77.95.210.

(2) Prioritized schedule for salmon production. Annually the department shall:

(a) Determine the salmon production capacity of department hatcheries;

(b) Determine the allowable numbers of hatchery-origin salmon that will be allowed to spawn naturally, by location;

(c) Make estimates of the number of adult salmon returning to department facilities;

(d) Solicit requests for viable salmon eggs from the following entities: Volunteer salmon rearing cooperatives established under chapter 77.100 RCW, regional fisheries enhancement groups established under chapter 77.95 RCW, lead entities for salmon recovery as established under chapter 77.85 RCW, government hatcheries in Washington, Oregon and Idaho, and hatcheries of federally recognized Indian tribes in Washington, Oregon and Idaho;

(e) Compile and submit for review by Indian tribes with treaty fishing rights a plan for replenishing fish runs through the use of available viable salmon eggs, including transfers to the entities listed in this subsection; and

(f) Offer an appeal mechanism to any entity denied a transfer of viable salmon eggs.

(2005 Ed.)

(3) The department will prioritize projects that utilize surplus viable salmon eggs and outplanting of adult fish. In such prioritization, the department will evaluate all proposed projects in terms of potential benefits and risks. In considering projects that involve placing adult, juvenile or eggs into a body of water, the biological factors that will be considered include, but are not limited to:

- (a) Expected salmon recovery benefits;
- (b) Effect on ongoing research and monitoring projects;
- (c) Nutrient benefit;
- (d) Habitat carrying capacity;
- (e) Interspecies interactions;
- (f) Disease risk;
- (g) Ability to monitor effects of introduction;
- (h) Biodiversity significance of the wild population;
- (i) Genetic similarity of introduced and wild stocks;
- (j) Status of populations under the Endangered Species Act or the salmonid stock inventory; and
- (k) The proportional mix of hatchery-origin and wild fish.

(4) All projects will be evaluated consistent with documented department protocols and procedures, recovery plans and management agreements, including, but not limited to:

- (a) *The WDFW Genetics Manual*;
- (b) *The WDFW Spawning Guidelines*;
- (c) *The WDFW Stock Transfer Guidelines*;
- (d) *The WDFW Fish Health Manual*;
- (e) The Co-Managers Fish Disease Control Policy;
- (f) The WDFW Wild Salmonid Policy;
- (g) WDFW hatchery and genetics management plans;
- (h) WDFW fishery management and evaluation plans;
- (i) Rules developed under section 4(d) of the Endangered Species Act; and
- (j) Take permits issued under sections 7 and 10 of the Endangered Species Act.

(5) Prioritized schedule for egg sales. To encourage the use of surplus live salmon eggs available for sale for the optimum benefit of the citizens of the state, the following priorities will be followed, within practical limitations, in distributing surplus live salmon eggs resulting from returns to artificial production facilities:

- (a) Sales to in-state aquaculturists when the eggs would be hatched, the resulting fry reared, by a person or corporation engaged in the fish industry in this state.
- (b) Sales to private Oregon sea ranchers where fish are to be released for migration from Oregon sites to the Pacific Ocean and thus subject to the public capture fisheries of the state of Washington.
- (c) Sales to the hatcheries located in California and Alaska where the fish are to be released at sites located in those states for migration to the Pacific Ocean for harvest by public capture fisheries and thus subjected to public capture by fishermen of the state of Washington.
- (d) Sales to other state, federal and private aquaculture programs.
- (e) Sales to foreign governmental entities.

[Statutory Authority: RCW 77.100.060, 02-10-023 (Order 02-79), § 220-74-020, filed 4/23/02, effective 5/24/02. Statutory Authority: RCW 75.08.080, 79-10-013 (Order 79-75), § 220-74-020, filed 9/7/79; 78-09-071 (Order 78-66), § 220-74-020, filed 8/25/78.]

(2005 Ed.)

WAC 220-74-022 Certain sales disallowed. (1) Sales of surplus eggs as described in WAC 220-74-020 shall not be allowed where the person or corporation seeking to buy said eggs has not paid all fees and taxes due and owing to the state of Washington.

(2) Notwithstanding the provisions of chapter 220-74 WAC, the department reserves the right to refuse to sell surplus salmon eggs to any purchaser for good cause.

[Statutory Authority: RCW 75.08.080, 84-05-046 (Order 84-11), § 220-74-022, filed 2/21/84; 79-10-013 (Order 79-75), § 220-74-022, filed 9/7/79.]

WAC 220-74-025 Purchases. Purchases of surplus salmon eggs will occur within the following framework:

(1) The price of eggs sold during a spawning season will be determined by the director after reviewing the results of an annual assessment of existing marketing conditions. The price will be the same for all purchases.

(2) Within priority 1, requests for available eggs will be satisfied in accordance with the earliest date of receipt of the application for a salmon aquaculture permit by the department (WAC 220-76-010): Provided, That a firm request for eggs is received prior to September 1. All firm requests for eggs received after September 1 will be satisfied in order of their receipt on an eggs-available basis.

(3) Within priority 1, up to one million eggs will be offered to the first qualified applicant before selling eggs to the next applicant. If eggs are still available after each applicant has had an opportunity to buy one million eggs, the procedure will be repeated until all requests within this priority have been satisfied.

(4) Within priorities 2 and 3, requests for eggs will be satisfied in accordance with the firm requests that have the greatest likelihood of contributing to the public capture fisheries of the state of Washington.

(5) Within priorities 4 and 5, requests for eggs will be satisfied in accordance with the earliest firm requests for eggs received.

WAC 220-76-100 Marine finfish aquaculture—Approval permit for marine finfish aquaculture. (1) It is unlawful for any aquatic farmer to possess any species, stock or race of marine finfish, defined as finfish being raised in marine waters, in net pens, cages or other rearing vessels without having first obtained and possessing a valid marine finfish aquaculture permit from the director for that species, stock and race at that specific location of rearing or holding. The director will approve, condition, or deny a permit within sixty days after a completed application containing all requested information is received by the department's aquaculture coordinator. The application must be accompanied by an escape prevention plan and the escape reporting and recapture plan as required by this chapter. A permit may be denied based on the determination by the director of significant genetic, ecological or fish health risks of the proposed fish rearing program on naturally occurring fish and wildlife, their habitat or other existing fish rearing programs. The use of transgenic fish (as defined by the actual transfer of genetic material from one species to another) is prohibited. Each permit application must contain a means mutually agreed to by the department and the aquatic farmer to individually identify to the aquatic farmer all marine finfish in aquaculture hatched after December 31, 2003. A permit will be valid for a period of five years from the date of approval. The department will comply with the procedures of any appropriate federal court order in processing permit applications. Any change in spe-

cies, stock, or race at a specific location of rearing or holding will require reapproval of the marine finfish rearing operation. In the event of denial, the affected person may appeal the decision to the director. The department will advise the person of the appeals process. Additional appeals may be made through the Administrative Procedure Act (chapter 34.05 RCW).

(2) Any person who imports marine finfish into the state for aquaculture or transports marine finfish within the state for aquaculture and who does not have an approved marine finfish aquaculture permit is guilty of unlawfully transporting finfish. Violation of this section shall be enforced under RCW 77.15.290.

[Statutory Authority: RCW 77.12.047. 03-02-047 (Order 02-309), § 220-76-100, filed 12/24/02, effective 7/1/03.]

WAC 220-76-110 Marine finfish aquaculture—Escape prevention plan required. A fish escape prevention plan is required with each application for a marine finfish aquaculture permit and approval by the department of the fish escape prevention plan is required before issuance of a marine finfish aquaculture permit.

(1) The escape prevention plan must include:

(a) Routine procedures and best management procedures used to minimize the risk of escapement from pens during normal day-to-day operations.

(b) Procedures to minimize escapements in the event the net-pens need to be moved, repaired, or manipulated in any manner, or during stocking or harvesting operations, which could result in a release of fish to state waters. At a minimum, prior to the net-pens being moved, a bathymetric analysis should be made along the intended travel route(s) to ensure adequate depth and the absence of underwater hazards or obstructions.

(c) Procedures for routine training of employees and contractors in escape prevention.

(d) Procedures for routinely determining and tracking the number of fish in each pen lost due to predation and mortality, and the number of fish lost due to escapement.

(e) Procedures for monitoring the implementation of (a) through (d) of this subsection.

(2) For the purpose of meeting the requirements of this section, plans and manuals required by the department of ecology through the National Pollutant Discharge Elimination System (NPDES) permit process may be submitted for approval.

(3) Marine finfish aquaculture farmers are required to implement the provisions of their approved fish escape prevention plan. Failure to implement the provisions of an approved escape prevention plan may result in invalidation of the marine finfish aquaculture permit. A notice of failure to comply with the fish escape prevention plan requirements will be given prior to invalidation of the permit, and the aquaculture farmer will have not less than seven nor more than ninety days to correct the conditions or status that caused the notice to be given. If the marine finfish aquaculture permit is invalidated, any transportation of finfish shall be treated as a violation of RCW 77.15.290.

[Statutory Authority: RCW 77.12.047. 03-02-047 (Order 02-309), § 220-76-110, filed 12/24/02, effective 7/1/03.]

(2005 Ed.)

WAC 220-76-120 Marine finfish aquaculture—Escape reporting and recapture plan required. (1) It is the responsibility of aquatic farmers to report an escape of marine finfish and to attempt to recapture escaped fish. Escaped marine finfish will be treated by the department the same as feral fish, and the department may augment capture and removal of such fish by scheduling recreational or commercial fisheries.

(2) An escape reporting and recapture plan is required with each application for a marine finfish aquaculture permit and approval by the department of the fish escape reporting and recapture plan is required before issuance of a marine finfish aquaculture permit.

(3) The escape reporting and recapture plan must include:

(a) Reporting procedure. Procedures for determining what constitutes a reportable fish escape. An emergency contact list in the event of a reportable fish escape from the permittee's net-pens, including local government, the department and the Washington department of ecology.

(b) Procedures requiring the permittee to report any reportable fish escape, within twenty-four hours of the permittee having knowledge of that escape, to local government, the department, and ecology. The report shall include the location, number, age class, disease and medication history, and cause of escape.

(c) Procedures to recapture escaped fish. Each marine aquatic farming location shall have a procedure for attempting recapture of escaped fish. The plan may include the use of facilities' skiffs, seines or nets and/or tribal and commercial fishers acting under contract with the aquaculture facility. For all reportable escapes, the permittee shall also submit a follow-up report describing all fish recovery efforts initiated in response to the escape, and effectiveness of the recovery efforts.

(d) Emergency procedures that will be taken to minimize the number of escaped fish.

(e) In the event the escaped fish were being treated with antibiotics or other drugs subject to USFDA withdrawal requirements and the withdrawal periods had not expired at the time of the escape, the permittee shall also include this information in the report required by (b) of this subsection, and shall provide a copy of the report to the Washington state department of health.

(4) For the purpose of meeting the requirements of this section, plans and manuals required by the department of ecology through the National Pollutant Discharge Elimination System (NPDES) permit process may be submitted for approval.

(5) The permittee shall submit, by the last day in February, an annual fish escape report to the department, covering the previous calendar year. The report shall summarize, by month and pen site, the number, age class, disease and medication history, and cause of all fish escapes to waters of the state. The permittee shall summarize the actions taken over the previous year to prevent the escape of fish to state waters.

(6) Marine finfish aquaculture farmers are required to implement the provisions of their approved fish escape reporting and recapture plan. Failure to implement the provisions of an approved escape reporting and recapture plan may result in invalidation of the marine finfish aquaculture permit.

[Title 220 WAC—p. 149]

A notice of failure to comply with the fish escape recapture and reporting requirements will be given prior to invalidation of the permit, and the aquaculture farmer will have not less than seven nor more than ninety days to correct the conditions or status that caused the notice to be given. If the marine finfish aquaculture permit is invalidated, any transportation of finfish shall be treated as a violation of RCW 77.15.290.

WAC 220-77-010 Intent. The intent of this chapter is to establish rules that promote the health, productivity and well-being of aquaculture products and the wild stock fisheries. These rules will identify the conditions that will be required for transfer and importation of live aquaculture products and the circumstances when action will be taken to control disease. These rules have been developed jointly by the department and the department of agriculture.

WAC 220-77-020 Definitions—Aquaculture disease control. For purposes of this chapter, the following definitions apply:

(1) "Aquaculture products" are defined as private sector cultured aquatic products propagated, farmed, or cultivated on aquatic farms under the supervision and management of an aquatic farmer, or such products naturally set on lands under the active supervision and management of an aquatic farmer.

(2) "Disease" is defined as infection, contagious disease, parasite, or pest, occurring on or within the aquaculture product, or other shellfish or finfish, or on or within the water or substrate associated with the aquaculture product, shellfish, or finfish, or an occurrence of significant mortality suspected of being of an infectious or contagious nature.

(3) "Finfish" is defined as live fish, fish eggs, or fish gametes, but not to include aquaria species commonly sold in the pet store trade when raised in containers that do not discharge to the water[s] of the state, indigenous marine baitfish, or mosquito fish.

(4) "Shellfish" is defined as all aquatic invertebrates except insects.

(5) "Epizootic" is defined as the occurrence of a specific disease which can be detected in fifty percent of the mortality or moribund individual fish in an affected container or shellfish on an affected bed or within an affected population, and which results in an average daily mortality of at least one-half of one percent of the affected individual fish for five or more days in any thirty-day period.

(6) "Marine plant" is defined as nonvascular plants belonging to the phyla Chlorophyta, Phaeophyta, or Rhodophyta and vascular plants belonging to the family Zosteraceae when growing in marine or estuarine waters, and includes the seeds, spores, or any life-history phase of the plants.

(7) "Working day" is defined as any day other than Saturday, Sunday, or a Washington state holiday.

(8) "Department" is defined as the department of fish and wildlife.

(9) "Quarantine" is defined as isolation of the organism in a department approved facility.

(16) "Market ready shellfish" are defined as aquatic invertebrate species which are intended for immediate human consumption and will not be placed into or come in contact with state waters.

(17) "Authorized finfish inspector" shall be defined as the individual who conducts or supervises testing in an authorized laboratory and attests to the results obtained. This individual signs/cosigns inspection and diagnostic reports and health certificates. The director shall maintain and provide upon request a roster of authorized finfish inspectors. An authorized finfish inspector shall be currently recognized by one of the following entities: The American Fisheries Society, Fish Health Section (either as Fish Health Inspector or Fish Pathologist); United States Fish and Wildlife Service, Title 50 Inspector; Canadian Department of Fisheries and Oceans, Fish Health Official or Inspector; Supervising veterinarian in a laboratory accredited by the American Association of Veterinary Laboratory Diagnosticians (AAVLD).

(21) "Terminal quarantine facility" is defined as a department-approved quarantine facility where imported aquatic invertebrates are held for public display or research purposes only, with minimal risk that the organisms will be released or that untreated quarantine facility holding waters will commingle with state waters. The operation plan of the quarantine facility must be approved by the department prior to the introduction of any organisms. At the conclusion of the public display or research, the organisms held in quarantine shall be destroyed and all waters and waste disinfected and disposed of using methods approved by the department.

WAC 220-77-030 Finfish aquaculture disease control.

(1) It is unlawful for any person to import into or transport within the state of Washington finfish aquaculture products without first having obtained a permit to do so issued by the department. A copy of the transport permit shall accompany the finfish aquaculture products at all times within the state of Washington, and must be presented upon request to authorized department employees.

(2) The director may impose conditions on a transport permit as necessary to ensure the protection of aquaculture products and native finfish from disease when the director concludes that there is a reasonable risk of disease transmission associated with the finfish aquaculture products.

(3) Upon the initial detection of a regulated pathogen, the department's fish health unit must be notified by the end of the following working day after diagnosis is made. The department will confirm or deny the presence of the regulated pathogen. Pending confirmation the department may take action under WAC 220-77-070 (1)(a) or (b).

(4) The director will issue, upon request, copies of the rules and policies dealing with finfish disease control.

(5) The director will issue or deny a transport permit within thirty days after a completed application containing all

requested information is received by the department's fish health unit.

(6) Violation of these rules or the conditions of the transport permit may result in the suspension or revocation of the permit.

(7) In the event of denial, suspension, or revocation of a transport permit, the affected person may appeal the decision to the director. The department will advise the person of the appeals process. Additional appeals may be made through the Administrative Procedure Act (chapter 34.04 RCW). A suspended or revoked transport permit will remain suspended or revoked during the appellate process.

(8) Any person desiring to conduct *in vivo* research using a regulated finfish pathogen is required to first obtain permission in writing from the department prior to beginning the research.

[Statutory Authority: RCW 77.12.047, 02-02-013 (Order 01-281), § 220-77-030, filed 12/21/01, effective 1/21/02. Statutory Authority: RCW 75.58.010, 87-08-033 (Order 87-20), § 220-77-030, filed 3/27/87.]

WAC 220-77-040 Shellfish aquaculture disease control. (1) It is unlawful for any person to import into Washington or possess live imported aquatic invertebrates, except market ready shellfish, without first obtaining an aquatic invertebrate import permit issued by the department. A copy of the permit shall accompany the aquatic invertebrates at all times within the state of Washington, and must be presented upon request to department employees.

(2) The director shall appoint a seven-member advisory committee consisting of one representative each from the department, the department of agriculture, the aquatic farmers of Washington, the federally recognized treaty tribes, private displays of aquatic invertebrates, aquatic invertebrate ecologists, and aquatic invertebrate disease control specialists. The committee will advise the department on importation of aquatic invertebrates, make recommendations on classification of shellfish diseases, and review department policy. Recommendations of the committee are not binding on the commission or director.

(3) Established species from existing import areas with current disease free tissue certification from areas of origin free of Class A shellfish diseases are eligible for continued importation.

(a) An additional disease free tissue certification must be submitted every three years. The department will waive the certification requirement if there is sufficient information that the source area is free of Class A shellfish diseases.

(b) Additional disease free certification may be required upon discovery or reports of disease at the geographic source.

(4) Established species from new areas of origin are eligible for import if health history documentation and disease free tissue certification are provided to the department. Import into quarantine is required for imports originating from outside the west coast commerce region.

(a) Conditional importation approval will be initiated by permit application.

(b) Presence of any Class A shellfish disease in the area of origin will result in denial of conditional approval.

(c) At least one additional disease free certification will be required during the first year of importation. In the absence of disease during the first year of importation, estab-

lished species will be eligible for continued importation, and the provisions of subsection (3) of this section will apply.

(5) Nonestablished species for which a health history documentation and disease free tissue certification have been initiated by permit application are eligible for importation only into quarantine.

A SEPA check list is required for any importation of a new species.

(6) Health history documentation will be based on available documentation over the five years prior to application for an import permit, unless a longer documentation is required for cause, and is required to be provided by the applicant. Disease free tissue certification is required from representative invertebrates proposed for import, and must be certified by a department-approved invertebrate health care professional. Disease-free tissue certification may be waived for aquatic invertebrate species placed into a terminal quarantine facility upon approval of an aquatic invertebrate import permit application.

(7) Department employees may inspect quarantine facilities used for permitted shellfish imports at reasonable times without prior notification.

(8) Importers are required to immediately report to the department any epizootic, significant mortality potentially attributable to an infectious disease or discovery of a Class A shellfish disease in an approved source area. The report is required to be made within 24 hours of the event or discovery. Annual reporting of the presence or absence of Class A or Class B shellfish diseases may be a condition of any permit.

(9) Violation of these rules or the conditions of the permit, confirmation of a Class A shellfish disease at the geographic source, or verification of a substantial shellfish mortality at the geographic source may result in the suspension or revocation of the import permit.

In the event of denial, suspension, or revocation of an import permit, the affected party may appeal through the Administrative Procedure Act. A suspended or revoked permit will remain suspended or revoked during the appeal process.

WAC 220-77-050 Amphibian aquaculture disease control. (1) It is unlawful to import into the state of Washington amphibian aquaculture products without having first obtained a permit to do so issued by the director.

(2) It is unlawful to possess African clawed frogs for aquaculture.

[Statutory Authority: RCW 75.58.010, 87-08-033 (Order 87-20), § 220-77-050, filed 3/27/87.]

WAC 220-77-060 Marine plant aquaculture disease control. (1) It is unlawful for any person to import into the state of Washington marine plant aquaculture products without having first obtained a permit to do so issued by the department. A copy of the permit shall accompany the imported marine plant aquaculture products at all times until

the initial point of entry into the marine environment, and must be presented upon request to department employees.

(2) The director may impose permit conditions as necessary to ensure the protection of aquaculture products and native marine plants from disease or pests when the director concludes there is a reasonable risk of disease or pest transmission associated with marine plant aquaculture products.

(3) For *Porphyra yezoensis* and *P. tenera*, the director will issue import and transfer permits if the plants are in the form of:

(a) Unialgal conchocelis culture of free living material; or

(b) Conchocelis-phase culture in shells after the shells and conchocelis have been washed and soaked in fresh water for at least twenty-four hours; or

(c) Blade phase on netting after two weeks at a temperature of minus twenty degrees centigrade or lower.

(4) For import of other species, the department will consider at least the following criteria, which may require the importer to provide a detailed life history and comply with the requirements of SEPA:

(a) The ability of the marine plant aquaculture product to naturally reproduce or interbreed with existing species in state waters.

(b) The ability of the marine plant aquaculture product to compete with existing species.

(5) Importation of marine plant aquaculture products for scientific study in a laboratory or under other controlled conditions is allowed without having obtained a permit when measures are taken to prevent release of the products or release of their gametes, spores, or tissue fragments into state waters. The director may inspect facilities to ensure appropriate control measures.

(6) For purposes of verification of the disease-free status of the marine plant aquaculture product in subsections (3), (4), and (5) of this section, the department may require sufficient samples for evaluation. In event of failure to obtain permit approval, consideration will be given to introduction after laboratory production of a second generation.

(7) It is unlawful to transfer marine plant aquaculture products between any of the following geographic areas without having first obtained a transfer permit: Columbia River; Pacific Ocean waters; Willapa Harbor; Grays Harbor; Puget Sound. No transfer permit is necessary for transfer within any of the geographic regions described above. When required, a copy of the transfer permit shall accompany the marine plant aquaculture products at all times until the products are reintroduced into state waters, and the transfer permit must be presented upon request to department employees.

(8) Violation of these rules, or the condition of any permit may result in suspension or revocation of the permit.

(9) In the event of denial, suspension, or revocation of an importation or transfer permit, the affected person may appeal the decision to the director. Additional appeals may be made through the Administrative Procedure Act (chapter 34.04 RCW). A suspended or revoked permit will remain suspended or revoked during the appellate process.

WAC 220-77-065 Kelp importation—Permit required. (1) It is unlawful for any person to import kelp into the state of Washington for use in the herring spawn on kelp fishery without first having obtained a permit to do so issued by the department. A copy of the permit must accompany the imported kelp at all times until the kelp is placed into the marine environment and must be presented upon request to department employees.

(2) The director may impose permit conditions as necessary to ensure protection of aquaculture products and native species from disease when the director concludes that there is a risk of disease transmission associated with the imported kelp.

(3) A kelp import permit is not transferrable.

(4) Violation of these rules or the conditions of a permit may result in suspension or revocation of the kelp import permit. In the event of denial, suspension or revocation of a kelp import permit, the affected party may appeal through the Administrative Procedure Act. A suspended or revoked permit will remain suspended or revoked during the appeal process.

[Statutory Authority: RCW 75.08.080, 97-08-078 (Order 97-56), § 220-77-065, filed 4/2/97, effective 5/3/97.]

WAC 220-77-070 Aquaculture disease control—Emergency provisions. (1) The director may take the following emergency enforcement actions when evidence indicates these actions are necessary to protect aquaculture products and native stocks from disease causing severe mortality:

(a) Deny issuance of an transport permit.

(b) Quarantine the aquaculture products.

(c) Confiscate or order the destruction of the aquaculture products.

(d) Require removal of the aquaculture product from state waters.

(2) For finfish, shellfish, amphibian, and marine plant aquaculture products:

(a) Quarantine may be ordered without a hearing when aquaculture products are transferred without appropriate inspections or permits or transferred in violation of the conditions of a permit.

(b) Quarantine may be ordered without a hearing when evidence demonstrates that aquaculture products, previously imported, may introduce a disease not known to occur in Washington.

(3) For finfish aquaculture products, if an epizootic caused by a regulated finfish pathogen is detected, quarantine may be ordered without a hearing.

(4) For shellfish aquaculture products, an outbreak of serious mortality in which contagious disease is suspected may result in quarantine or require removal of the suspected diseased shellfish aquaculture products from state waters, subject to the aquatic farmer's right to an emergency departmental hearing, if removal from state waters is ordered.

(5) When there is evidence that continued presence of aquaculture products in state waters may cause disease that would harm other aquaculture products or native fauna or flora, the director may order quarantine, confiscation, destruction, or removal from state waters. Except as provided for in subsection (3) of this section, the aquatic farmer has a right to a departmental hearing. In the event the director has

ordered emergency action of confiscation, destruction, or removal from state waters, the director shall give notice to the affected aquatic farmer. At the time of notice of emergency action, the affected aquatic farmer may request an emergency departmental hearing. If requested, the hearing will take place no later than the third working day after notice is received by the aquatic farmer. The hearing will be presided over by a hearing officer appointed by the director, who will consider the severity of the disease outbreak, remedies, and alternate courses of action. The hearing officer shall present a recommendation to the director. The director will then review the emergency action and, if appropriate, order confiscation, destruction, or removal from state waters. If so ordered, the emergency action will take place no sooner than forty-eight hours after service of the order. If no request for an emergency departmental hearing is received, the emergency action of confiscation, destruction, or removal from state waters, may take place immediately after the third working day after the notice is served on the aquatic farmer.

(6) If the department refuses to issue a transport permit, or orders quarantine or isolation of aquaculture products, the aquatic farmer has a right to a hearing under the Administrative Procedure Act (chapter 34.04 RCW).

[Statutory Authority: RCW 77.12.047. 02-02-013 (Order 01-281), § 220-77-070, filed 12/21/01, effective 1/21/02. Statutory Authority: RCW 75.58.010. 87-08-033 (Order 87-20), § 220-77-070, filed 3/27/87.]

ANS coordinator, at Department of Fish and Wildlife, 600 Capitol Way No., Olympia, WA 98501-1091, which includes the following information:

(i) Vessel name, identification number (International Maritime Organization, Lloyds of London or U.S. Coast Guard registry number), owner, agent and vessel type; and

(ii) A statement that the vessel will not discharge ballast water.

(b) Vessels that would normally discharge ballast water, but will not discharge on any given trip, may continue to file the ballast water reporting form, with "not discharging" written in the ballast water history section.

(3) The department, or designated representatives, may at reasonable times and in a reasonable manner, during a vessel's scheduled stay in port, take samples of ballast water and sediment, may examine ballast water management records, and may make other appropriate inquiries to assess the compliance of vessels with ballast water reporting and control requirements.

(2) Vessels subject to chapter 77.120 RCW that have not adequately exchanged their ballast water must treat their ballast prior to discharge into Washington waters, after July 1, 2004. An interim approval process shall be used to evaluate ballast water treatment technologies and provide approval for certain technologies that are determined to meet the Washington state interim ballast water discharge standard. Only ballast water treatment technologies that are approved through this process may be used to discharge treated ballast water into Washington waters following the guidelines identified within the approval process. Ballast water treatment technology vendors or vessel owners may submit ballast treatment technology for evaluation through the following process:

(a) Applications for approval will be accepted by the director or the director's designee at any time. The applicant is to be notified of department receipt of the application package within ten working days. If the application package is incomplete, the application will be returned to the applicant with an explanation of deficiencies or if the deficiencies are minimal, held for thirty days to allow the applicant to correct the deficiencies. Formal reviews of supporting data and proposed study plans will be completed within forty-five days of receipt of the complete application package.

(b) Formal reviews will be conducted by a science advisory panel and a maritime advisory panel. Panel members will be appointed by the director or the director's designee. The science advisory panel will provide recommendations to the director or the director's designee regarding the ability of each technology to meet the Washington state interim ballast water discharge standard, the adequacy of the proposed study plan, and determine if such technology should be evaluated as a promising technology that could be considered as a "best

available technology." The maritime advisory panel will provide recommendations to the director or the director's designee regarding the ability of each technology to meet the practical needs of the maritime industry, including safety, practicality and cost effectiveness, and determine if such technology should be evaluated as a promising technology that could be considered as a "best available technology."

(c) The director, or the director's designee, shall take into consideration the findings of the scientific advisory panel, and the maritime advisory panel and make one of the following determinations:

(i) That the ballast water treatment technology has been approved by the United States Coast Guard or a state agency and is an approved system for use in Washington state;

(ii) To grant general approval to a technology meeting the Washington state interim ballast water discharge standard for a period of five years with stipulations for scientific evaluation. Approval may be revoked if new information shows the technology to be grossly inadequate and incapable of being retrofitted to correct the inadequacy;

(iii) To grant conditional approval for use on a specific number of vessels for further full-scale testing; or

(iv) Deny approval.

(d) Criteria for review. Applications for interim approval of a ballast water treatment system shall be evaluated on the completeness of the following:

(i) A letter of commitment from the technology vendor, the vessel owner installing the technology, and the principal investigators conducting the tests, stating their intents to carry out all components of the study plan for which they are responsible. Principal investigators must be qualified independent researchers. Applications for a treatment system to be used within a specified port must include a letter from the port authority in which the system is to be operated, granting authority for testing or use within the port.

(ii) Documentation stating that the residual concentrations of any primary treatment chemicals or chemicals that occur as by-products of the treatment meet all applicable regulatory requirements.

(iii) All available documentation describing the technical, operational and installation characteristics of the system.

(iv) Documentation from preliminary experiments that demonstrate the potential of the system to meet the Washington state interim ballast water discharge standard. Indicator species may be used to evaluate the technologies' effectiveness. Technologies may be approved that do not currently meet this criteria, but show promise for improvement or are considered to be a "best available technology." The technology should include easily verifiable indicators to ensure the system is operational and effectively treating ballast at the time of treatment.

(v) The discharge from a technology must be environmentally sound and in compliance with existing water quality discharge laws.

(e) Each proposed technology must include a detailed study plan that:

(i) Is organized according to a department-approved standardized format.

(ii) Evaluates the effectiveness of the treatment system over a range of operational conditions during operations, including the cumulative hours of operation, volumes treated,

times since the tanks were last cleaned of sediment, abundance of organisms, organic and inorganic load, temperature and salinity of water.

(iii) Identifies limiting conditions such as water quality attributes that may affect the performance of the equipment, length of time for adequate treatment, or other factors that may render the technology as inadequate to meet the interim ballast water discharge standard.

(iv) Assures that samples are representative of the flow or volume from which they are taken.

(v) Contains a detailed quality assurance and/or quality control plan.

(3) Conditions of approval.

(a) Approval of a technology shall be withdrawn after one year if the system is not installed or the testing begun as proposed.

(b) Systems approved under the interim approval process shall be considered to meet all ballast water treatment requirements promulgated by the department for a period of five years. In the event subsequent work reveals adverse effects on ecology or human health, approval of the system will be withdrawn unless the treatment system can be repaired to address the system's inadequacies.

(c) Systems approved under the interim process will be subject to all subsequent standards and regulations upon the expiration of the interim approval period.

(d) Interim approval is contingent on adherence to the detailed study plan described in the application and agreed upon by the applicant and the department.

(e) The principal scientist and engineers responsible for conducting and analyzing the tests shall submit a report documenting the performance of the equipment and results of the testing to the department within twelve months after installation. Further testing may or may not be required based upon the test results.

(f) Vessels or technologies receiving interim approval shall be subject to inspections by the department or the department's designated representative to verify adherence with the terms of this interim approval agreement and the operation of the treatment systems.

(a) Is the possessor of a valid trawl license.

(b) Submits proof of landing as required by RCW 75.30.170.

(c) Submits proof of ownership or lease, as of January 1, 1986, of an otter trawl vessel and otter trawl net, which may be either a pelagic trawl net or a bottom trawl net.

(2) The possessor of the Puget Sound whiting endorsement must be aboard the vessel at all times while the vessel is fishing for whiting or has whiting aboard, except during unloading.

(3) Only a natural person may obtain a yearly Puget Sound whiting endorsement. A corporation or partnership that meets the qualifications in subsection (1) of this section may designate one natural person to receive the endorsement. The designation is irrevocable.

(4) The Puget Sound whiting endorsement is valid for one person and one vessel. An individual may not possess more than one endorsement.

(2) A person may transfer a Puget Sound whiting endorsement from one vessel to another vessel by making application at the department's licensing division for a transfer of the person's trawl license from the first vessel to the second vessel, and informing the licensing division, in writing, that the person is additionally transferring the Puget Sound whiting endorsement. In the case of an individual having more than one trawl license, the transfer of the Puget Sound whiting endorsement from one vessel to a second vessel will be made in substantially the same form as if a trawl license was being transferred.

WAC 220-88-010 Emerging commercial fisheries—Definitions. The following definitions apply to this chapter:

(1) "Experimental fishery permit" means a permit issued by the director for either:

(a) An "emerging commercial fishery" defined as a fishery for a newly classified species for which the department has determined that there is a need to limit participation; or

(b) An "expanding commercial fishery" defined as a fishery for a previously classified species in a new area, by a new method, or at a new effort level, for which the department has determined that there is a need to limit participation.

(2) "Trial commercial fishery permit" means a permit issued by the department for trial harvest of a newly classified species, or harvest of a previously classified species in a new area or by a new means. A trial commercial fishery permit will only be issued when the department has determined that there is no need to limit participation. The director may redesignate a trial commercial fishery as an emerging or expanding commercial fishery if the director finds that there is a need to limit participation in that fishery.

[Statutory Authority: RCW 75.08.080. 92-19-012 (Order 92-89), § 220-88-010, filed 9/3/92, effective 10/4/92.]

WAC 220-88-020 Experimental fishery permits. (1) The director will issue experimental fishery permits after the date rules designating a fishery as either an emerging commercial fishery or an expanding commercial fishery and establishing the number and qualifications of permit holders take effect.

(2) Only persons meeting the following requirements may hold an experimental fishery permit:

(a) The person must hold a commercial fishing license under chapter 75.28 RCW for the gear to be used with the experimental fishery permit or own a vessel that holds such a license. An experimental fishery permit is supplemental to a

(2005 Ed.)

commercial fishing license, and may not be used unless the fisher or the fisher's vessel is currently licensed.

(b) No person ineligible to hold a commercial fishing license will be issued an experimental fishery permit. The person must meet the qualifications established for the experimental fishery permit that the person seeks.

(c) In the event an emerging or expanding commercial fishery arises from a trial commercial fishery, the director shall consider whether a fisher making application for an experimental fishery permit had previously held a trial commercial fishery permit for that fishery.

(3) An experimental fishery permit will not be issued for any species for which a license, endorsement, or validation limitation has been established pursuant to chapter 75.30 RCW, or for any fishery under the jurisdiction of the secretary of commerce.

(4) The director may at any time close an emerging or expanding commercial fishery for conservation reasons.

[Statutory Authority: RCW 75.08.080. 92-19-012 (Order 92-89), § 220-88-020, filed 9/3/92, effective 10/4/92.]

WAC 220-88-040 Trial commercial fishery permits.

(1) Applications for trial commercial fishery permits must specify the species, fishing area, and fishing method to be used.

(2) The department will respond to any request for a trial commercial fishery permit within sixty days of receiving the application.

(3) Only persons who hold a commercial fishing license under chapter 75.28 RCW for the gear to be used with the trial commercial fishery permit or own a vessel that holds such a license are eligible to hold a trial commercial fishery permit. A trial commercial fishery permit is supplemental to a commercial fishing license, and may not be used unless the fisher or the fisher's vessel is currently licensed.

(4) The director will issue a trial commercial fishery permit for a newly classified species only after the director has by rule classified the species as a food fish or shellfish in chapter 220-12 WAC. If emergency classification is required, the director will issue the trial commercial fishery permit only for the period of emergency classification, and will not renew the permit unless the department has received a request for permanent classification at least two weeks before the end of the permit period.

(5) The director may redesignate a trial commercial fishery as an emerging or expanding commercial fishery if the director finds that there is a need to limit participation. A trial commercial fishery permit for that fishery does not guarantee future eligibility for an experimental fishery permit.

(6) The director may at any time close a trial commercial fishery for conservation reasons.

WAC 220-88B-020 Designation of the coastal spot shrimp pot fishery as an emerging commercial fishery. (1) The director designates the coastal spot shrimp pot fishery as an emerging commercial fishery for which use of a vessel is required. It is unlawful to fish for, possess, or deliver spot shrimp taken for commercial purposes from Washington territorial waters west of the Bonilla-Tatoosh line or from waters of the Exclusive Economic Zone unless the fisher has a valid emerging commercial fishery license and a valid coastal spot shrimp pot experimental fishery permit.

(2) The following licenses may not be used to fish for, possess, or deliver spot shrimp taken in Washington territorial waters west of the Bonilla-Tatoosh line or waters of the Exclusive Economic Zone: Shellfish pot fishery license, nonlimited entry delivery license, salmon troll delivery license, salmon delivery license, crab pot fishery license, Dungeness crab—coastal fishery license.

[Statutory Authority: RCW 77.12.047, 03-17-007 (Order 03-187), § 220-88B-020, filed 8/7/03, effective 9/7/03. Statutory Authority: RCW 75.08.080, 99-01-154 (Order 98-257), § 220-88B-020, filed 12/22/98, effective 1/22/99.]

WAC 220-88B-030 Emerging commercial fishery—Eligibility for coastal experimental fishery permits—Terms and conditions of use—Renewal—Vessel restriction—Incidental catch. (1) No individual may hold more

than one Washington coastal spot shrimp experimental fishery permit.

(2) Coastal spot shrimp experimental fishery permits are not transferable. Only the vessel designated on the emerging commercial fishery license and coastal spot shrimp experimental fishery permit may be used to fish for or deliver spot shrimp.

(3) A coastal spot shrimp experimental fishery permit will be issued only to a natural person who:

(a) Held such a permit the previous year; and

(b) Can demonstrate by valid Washington fish receiving tickets that at least 1,000 cumulative round weight pounds of spot shrimp taken from waters of the Pacific Ocean adjacent to the state of Washington were landed from the person's designated vessel or vessels during the previous two calendar years. Landings of spot shrimp reported as "tails" on fish receiving tickets will be converted to round pounds by multiplying the reported weight of tails by two.

(4) Coastal spot shrimp experimental fishery permits may be revoked by the director, and future permits denied by the director, for failure to comply with conditions specified in the permits or violations of other fishing regulations. A coastal spot shrimp experimental fishery permit will not be renewed if the emerging commercial fishery license is revoked or future fishing privileges of the licensee are suspended.

(5) The director may issue a coastal spot shrimp experimental fishery permit to another person if a permittee fails to make the requisite landings, if the person's experimental coastal spot shrimp experimental fishery permit is revoked, or if no application for an emerging commercial fishery license is received by March 31st of each year. The total number of permits issued, including replacement permits, shall not exceed fifteen. Selection of persons to receive replacement permits shall be by gear or gear replacement type, and replacement permits will be offered in descending order first to persons who made the largest total of Washington coastal spot shrimp landings in each gear type during the original qualifying period, and then in descending order to persons who made the largest total of Washington coastal spot shrimp landings in each gear type. If no persons with coastal spot shrimp landings wish to participate, the director may offer a replacement permit by random drawing.

(6) Coastal spot shrimp experimental fishery permits are only valid for the year issued and expire on December 31st of the year issued with the expiration of the emerging commercial fishery license.

(7) The total allowable catch of spot shrimp taken from Washington territorial waters west of the Bonilla-Tatoosh line and from adjacent waters of the Pacific Ocean during a calendar year is 250,000 pounds round weight provided that not more than 100,000 pounds may be taken south of 47°04.00' N. latitude.

(8) Beginning January 1, 2003, through December 31, 2005, the allowable catch shall be allocated as follows: 175,000 pounds available to all permit holders and 75,000 pounds available to fishers who were converted from trawl to pot permits. Beginning January 1, 2006, the allowable catch is available to all permit holders.

(9) Vessel restriction: A coastal spot shrimp experimental fishery permit will not be issued to a person who desig-

rates a vessel greater than ten feet longer than the vessel designated as of March 31, 2003, provided that if the vessel designated as of March 31, 2003, is ten or more feet greater than the vessel used by the person to initially qualify for a coastal spot shrimp experimental fishery permit, the person may not designate a vessel greater in length than the vessel designated as of March 31, 2003.

(10) Incidental catch:

(a) It is unlawful to retain more than 50 pounds round weight of other shrimp species. It is lawful to retain octopus and squid.

(b) It is unlawful to retain salmon.

(c) It is unlawful to retain any bottomfish species.

[Statutory Authority: RCW 77.12.047. 04-05-027 (Order 04-21), § 220-88B-030, filed 2/10/04, effective 3/12/04; 03-17-007 (Order 03-187), § 220-88B-030, filed 8/7/03, effective 9/7/03; 02-02-050 (Order 01-287), § 220-88B-030, filed 12/27/01, effective 1/27/02; 00-17-107 (Order 00-152), § 220-88B-030, filed 8/16/00, effective 9/16/00. WAC 220-88B-040 Coastal spot shrimp pot experimental fishery—Season and gear—Species restriction. It is unlawful to fish for spot shrimp for commercial purposes in coastal and offshore waters using shellfish pot gear except as provided in this section:

(1) Season - Open to shellfish pot gear the entire year.

(2) Gear restrictions:

(a) Maximum of 500 shellfish pots per permit.

(b) Pot size is limited to a maximum 153 inch bottom perimeter and a maximum 24 inch height.

(c) Shrimp pot gear must be constructed with net webbing or rigid mesh, and at least 50 percent of the net webbing or mesh covering the sides of the pot must easily allow passage of a seven-eighths inch diameter dowel.

(d) Pot gear is required to have an escape mechanism as provided for in WAC 220-52-035.

(e) Groundline end marker buoys must be floating and visible on the surface of the water, equipped with a pole, flag, radar reflector and operating light, and marked with the clear identification of the permittee.

(3) Incidental catch: It is unlawful to retain any species of finfish or shellfish taken with spot shrimp pot gear, except that it is lawful to retain octopus, squid, and up to 50 pounds round weight of other shrimp species taken with shrimp pot gear. It is unlawful for persons fishing in the coastal spot shrimp experimental fishery to deliver spot shrimp while having on board bottomfish taken in the coastal bottomfish fishery under WAC 220-44-050.

(1) The director designates the coastal pilchard fishery as an emerging commercial fishery for which use of a vessel is required. It is unlawful for any person to fish for, possess, or deliver pilchard taken from Washington waters west of the Bonilla-Tatoosh line or from the waters of the Exclusive Economic Zone unless the fisher has a valid emerging commercial fishery license and a valid coastal pilchard experimental fishery permit, or except as otherwise provided.

(2) The following fishery licenses may not be used to take pilchard from Washington waters west of the Bonilla-Tatoosh line or from the waters of the Exclusive Economic Zone: Baitfish lampara; baitfish purse seine; Columbia River smelt; food fish trawl—non-Puget Sound; herring dip bag net; herring gill net; herring lampara; herring purse seine; smelt dip bag net; smelt gill net, except as provided for in chapter 220-44 WAC.

(a) Held such a permit the previous year;

(b) Has purchased an emerging commercial fisheries license by April 1st; and

(2) Beginning 2005, a coastal pilchard experimental fishery permit will be issued only to a natural person who:

(a) Held such a permit the previous year;

(b) Can demonstrate by valid Washington fish receiving tickets that at least forty metric tons cumulative weight of pilchard taken from Pacific Ocean waters were landed under the person's emerging commercial fishery license during the previous two calendar years;

(c) Has purchased an emerging commercial fisheries license by April 1st; and

(d) As of December 1st of the previous licensing year has no outstanding observer fees owed to the department.

[Title 220 WAC—p. 163]

(3) Coastal pilchard experimental fishery permits may be revoked by the director, and future permits denied by the director, for failure to comply with conditions specified in the permits or violation of other commercial fishing rules, and shall be revoked if the emerging commercial fishery license is suspended. A coastal pilchard experimental fishery permit will not be renewed if the emerging commercial fishery license is revoked or future fishing privileges of the licensee are suspended.

(4) If less than twenty permits are issued to persons who meet the permit renewal requirements specified in subsection (1) of this section, the director may offer replacement permits, provided that:

(a) The total number of permits issued by the director, including replacement permits, shall not exceed twenty-five.

(b) Replacement permits shall be issued to persons who can demonstrate by valid Washington fish receiving tickets that a minimum of forty metric tons (cumulative round weight) of pilchard were landed under the person's emerging commercial fishery license in 2000, 2001, and 2002, and who have submitted a completed replacement permit application to the department by June 1, 2004.

(c) If more than twenty-five persons meet the criteria specified in (b) of this subsection, replacement permits will be issued to persons with the highest cumulative landings during the qualifying period, in descending order, until twenty-five permits are issued.

(5) Coastal pilchard experimental fishery permits are only valid for the year issued and expire on October 31st of the year issued with the expiration of the emerging commercial fishery license.

(6) Permit holders must designate a vessel to be used in the coastal pilchard emerging commercial fishery at least forty-eight hours before their first pilchard fishing trip of each season. Once designated, permit holders may not change vessel designation for the remainder of the season, except in an emergency and then only if allowed by the director. The same vessel may not be designated on more than one emerging commercial fishery license and accompanying coastal pilchard experimental fishery permit.

WAC 220-88C-050 Coastal pilchard fishery—Observer and sampler coverage, logbook requirements.

(1) As a condition of the experimental commercial fishery permit, participants in the coastal pilchard fishery are required to have on-board observers for any pilchard fishing effort, and are required to have observer coverage for one-half of the vessel trips. Fishers may elect to use either department-provided observers, or National Marine Fisheries-certified observers, but must notify the department of their irrevocable decision on which type of observer to use at least 48 hours before their first pilchard fishing trip of the season. NMFS-certified observers must have completed a department training session. Department-provided observer coverage will be made available to fishers who agree to reimburse the department at a rate of \$100 per landing, whether or not the vessel trip was observed. Payment for department-provided observer coverage is due by the tenth day of the following month for the previous month's landings, and failure to make timely payment will result in revocation of the experimental commercial fishery permit.

(2) In order to allow sufficient time for observer coverage and sampling efforts, fishers must notify the department's sardine hotline during normal business hours at least 48 hours before the first vessel trip and at least 24 hours before each subsequent trip. Fishers must provide name and contact phone number, time and location of departure, and estimated time and location of landing. Up to 500 sardine per vessel trip may be retained by WDFW samplers for biological information.

(3) All persons who obtain an experimental commercial fishery permit for the coastal pilchard fishery must complete a department-issued logbook, and the logbook is required to be returned to the department by November 15th of the year of issuance. Failure to submit the logbook will cause the person to be ineligible for a permit in the following season.

WAC 220-95-013 2001-2002 Puget Sound salmon license economic adjustment assistance program established—Fund allocation—Expiration. (1) The legislature and the federal government have allocated funds and anticipate allocating additional funds to buy back salmon licenses from commercial license holders. The department hereby designates \$34,884,689 of these funds as the 2001-2002 Puget Sound salmon license economic adjustment assistance program (program). The licenses eligible to participate in the

program are purse seine, Puget Sound salmon gill net, and reef net.

(2) The goal of the program is to provide economic relief to Washington commercial salmon fishers, and to reduce the number of Washington commercial salmon licenses. To accomplish this, the department is proposing a three-step process, all three steps of which are purchase of licenses for a fixed sum.

(3) The department will allocate the funds available for the program after deducting up to 3% for the costs of state program administration as follows:

(a) Spring 2001, Phase 1.

(i) Purse seine - 56.4% at a purchase price of \$103,300 per license.

(ii) Gill net - 38.5% at a purchase price of \$27,500 per license.

(iii) Reef net - 5.1% at a purchase price of \$57,600 per license.

(b) Fall 2001, Phase 2.

(c) Spring 2002, Phase 3.

Program administration funds that will not be used will be reallocated to license purchases.

(4) The program expires upon the distribution of all available funds.

WAC 220-95-027 Ranking and acceptance of salmon purse seine license offers. (1) All salmon purse seine licenses will be ranked based upon participation in the Puget Sound summer and fall salmon fisheries.

(2) Purse seine rankings will be based upon a point system (0-15) for landings in the months of July and August (summer fisheries) and/or the months of September, October, and November (fall fisheries) between 1994 and 1998. One point will be assigned for a verified landing during the fall fisheries and two points will be assigned for a verified landing during the summer fisheries or a maximum of fifteen points possible.

(3) Points will be assigned only if the current license owner and program applicant also landed salmon on that same license some time during the 1994-1998 qualifying period except upon the death of the licensee, the license shall be treated as analogous to personal property for purposes of calculating and assigning points in the program. A license transferred to an immediate family member during or after the period 1994-1998, and who has continued with that license shall be able to count the points for that license and shall be qualified to participate in the program.

(4) Example: A current license owner makes a landing on the license in August and October of each year from 1994 to 1998. The owner is assigned the maximum fifteen points possible. If landings were only made in August 1994 and October 1998, then the owner would be assigned three points.

(5) Landings will be documented on official Washington state fish-receiving tickets or computer-generated landing lists certified by the department to be true and correct copies of Washington fish receiving tickets.

(6) In the event that two or more applicants have the same number of points, a random draw shall be conducted to rank the applicants among themselves before placing them into the overall rank order.

(7) The ranking will continue until all applicants have been rank-ordered. The order of ranking will apply to all phases of the program.

(8) **Persons selected** based upon the rank order and the available funds will be notified by the department that a license offer has been accepted by registered mail to the address provided on the offer form. The enclosed acknowledgment sent with the acceptance letter must be signed and returned to the department within twenty days of the department's mailing date. Any acknowledgment received after the twenty-day period is void and the acceptance will be withdrawn. Final rankings of all licenses will be available upon request to applicants when all appeals have been settled.

(9) **Persons not selected** in Phase 1 will be sent an acceptance by mail to the address provided on the offer form that their ranking will continue to apply for Phase 2 and Phase 3 when they should occur.

(10) Persons who apply after 5:00 p.m. on May 11, 2001, will be ranked at the bottom of the ranked list in the order that the applications were received. They are not eligible to participate in Phase 1. Applications received on a single day will be ranked by random draw.

(11) Persons who wish to appeal their ranking must appeal within twenty days of the mailing date of the registered letter of acceptance. Any appeal received after the twenty-day period is void and the ranking will stand. Appeals will be referred to an adjudicative proceeding for resolution.

(12) The department will tender the amount of the offer upon receipt of a valid acknowledgment and upon resolution of all appeals that affect the ranking of licenses to be purchased.

[Statutory Authority: RCW 77.12.047, 01-10-031 (Order 01-66), § 220-95-027, filed 4/24/01, effective 5/25/01. Statutory Authority: RCW 75.08.080, 98-20-052 (Order 98-206), § 220-95-027, filed 10/1/98, effective 11/1/98; 95-07-012 (Order 95-20), § 220-95-027, filed 3/3/95, effective 4/3/95.]

(2) The random drawing will continue until all applicants who offered to sell at the department's offered price have been rank-ordered. The order of ranking will apply to all phases of the buyback.

(3) **Persons selected** will be notified by the department that a license offer has been accepted by registered mail to the address provided on the offer form. WAC 220-95-110 Sea cucumber license reduction program. In order to provide for economic stability in the commercial sea cucumber fishery, and in accordance with RCW 77.70.190, the department establishes the sea cucumber license reduction program (program).

(1) **Eligibility:** All persons who currently hold a sea cucumber commercial fishery license are eligible to offer their license(s) for purchase under the program.

(2) **Method of purchase:** The department will rank offers to sell sea cucumber licenses from the lowest offer to the highest offer. The department will purchase licenses each year from the funds made available under RCW 77.70.190, with a maximum purchase price of \$8,000 per license.

(3) **Offer process:** The department will accept offers to sell beginning August 1st of each year and will purchase licenses based on the funds that are available on the following September 30th.

(4) **Selection process:** The department will select licenses to be purchased beginning with the lowest offer to sell, and continuing until there are insufficient funds to purchase a complete offer. If two or more licenses are offered at the same price, selection will be by random draw.

(5) **License reduction process:** Upon selection, the department will issue a warrant to the license holder in the amount of the offer. On the date the warrant is mailed to the mailing address of the license holder as shown in their department licensing file, the department will void the license.

[Title 220 WAC—p. 167]

Upon receipt of the warrant, the license holder is to return the license cards to the department.

(6) No prohibition on reentry: License holders who sell a license under the program may reenter the sea cucumber commercial fishery.

(7) Program termination: This program terminates when the number of sea cucumber commercial fishery licensees is reduced to twenty-five.

WAC 220-100-027 Critical areas. During threshold determination and in determining whether a proposal is exempt from SEPA, the department shall give due consideration to a local government's critical area categorical exemption designations made by local governments under WAC 197-11-908.

(2) These policies and procedures are developed to implement SEPA in a manner which reduces duplication, establishes effective and uniform rules, encourages public involvement, and promotes certainty with respect to the requirements of the act.

(3) These policies and procedures are not intended to cover compliance by the department with respect to the National Environmental Policy Act of 1969 (NEPA). In those situations where the department is required by federal law or regulations to perform some element of compliance with NEPA, compliance will be governed by the applicable federal statute and regulations.

[Statutory Authority: RCW 77.12.047. 03-10-038 (Order 03-83), § 220-100-030, filed 4/30/03, effective 5/31/03. Statutory Authority: RCW 75.08.080. 84-19-053 (Order 84-144), § 220-100-030, filed 9/18/84; Order 76-40, § 220-100-030, filed 5/25/76.]

WAC 220-100-040 Scope and coverage of this chapter. (1) It is the intent of the department that compliance with this chapter shall constitute complete procedural compliance with SEPA for all actions as defined in WAC 197-11-704.

(2) This chapter applies to all department actions as defined in WAC 197-11-704.

(3) To the fullest extent possible, the department shall integrate procedures required by this chapter with existing planning and licensing procedures. These procedures should be initiated early, and undertaken in conjunction with other governmental operations to avoid lengthy time delays and unnecessary duplication of effort.

(4) To the fullest extent possible, the department shall:

(a) Prepare environmental documents that are concise, clear, and to the point, and that are supported by evidence that the necessary environmental analyses have been made.

(b) Find ways to make the SEPA process more useful to decision makers and the public.

(c) Reduce unnecessary paperwork and the accumulation of extraneous background data.

[Statutory Authority: RCW 77.12.047. 03-10-038 (Order 03-83), § 220-100-040, filed 4/30/03, effective 5/31/03. WAC 220-100-045 Agency policy—Substantive authority and mitigation. (1) The policy of the department is to avoid or mitigate adverse environmental impacts that may result from department actions. This policy results from:

(a) The legislated duties of the department with respect to fish and wildlife; and

(b) Recognition of the fact that each person has a fundamental and inalienable right to a healthful environment and that each person has a responsibility to contribute to the preservation and enhancement of the environment (RCW 43.21C.020(31)).

(2) If an action is subject to SEPA, and the proposed activity requires a permit from the department, and is reasonably likely to have an adverse environmental impact as identified in an environmental document, the department may:

(a) Require reasonable alternatives to the action and/or proven measures which will mitigate or eliminate the identified potential adverse impact, and make such alternatives and/or proven mitigation measures conditions of the department's approval; or

(b) Deny the proposal if significant adverse impacts as identified in a final or supplemental environmental impact statement prepared under chapter 197-11 WAC are not satisfactorily avoided or mitigated by proven techniques.

[Statutory Authority: RCW 77.12.047. 03-10-038 (Order 03-83), § 220-100-045, filed 4/30/03, effective 5/31/03. Statutory Authority: RCW 75.08.080. 84-19-053 (Order 84-144), § 220-100-045, filed 9/18/84; 78-05-029 (Order 78-17), § 220-100-045, filed 4/17/78.]

WAC 220-100-055 Timing of the SEPA process. (1) When another agency is the lead agency, the department's environmental review process will normally begin upon receipt of a determination of nonsignificance (DNS), determination of significance (DS), scoping notice, or draft environmental impact statement (DEIS). When the department is the lead agency for nonagency actions, review will normally begin upon receipt of a complete permit application and a complete environmental checklist. The department typically requests plans and a location map, pursuant to WAC 197-11-100. The applicant may choose to submit this information with the checklist so that review may proceed expeditiously. For department actions, environmental review will normally begin when the proposed action is sufficiently developed to allow preliminary decisions.

(2) Upon written request of an applicant, preliminary environmental review will be conducted prior to receipt of detailed project plans and specifications. In such instances, the applicant shall submit information judged by the department to be sufficient to make a preliminary review.

(3) The preliminary review will be advisory only and not binding upon the department. Final review and determination will be made only upon receipt of detailed project plans and

(2005 Ed.)

specifications. The department will make a determination within ninety days after the application and supporting documents are complete pursuant to RCW 43.21C.033.

[Statutory Authority: RCW 77.12.047. 03-10-038 (Order 03-83), § 220-100-055, filed 4/30/03, effective 5/31/03. Statutory Authority: RCW 75.08.080. 84-19-053 (Order 84-144), § 220-100-055, filed 9/18/84.]

WAC 220-100-057 Threshold levels adopted by local governments. During threshold determination and in determining whether a proposal is exempt from SEPA, the department shall give due consideration to exempt levels adopted by local governments under WAC 197-11-800.

[Statutory Authority: RCW 77.12.047. 03-10-038 (Order 03-83), § 220-100-057, filed 4/30/03, effective 5/31/03.]

WAC 220-100-058 Notice/statute of limitations. (1) The department, applicant for, or proponent of an action may publish a notice of action pursuant to RCW 43.21C.080.

[Statutory Authority: RCW 77.12.047. 03-10-038 (Order 03-83), § 220-100-058, filed 4/30/03, effective 5/31/03.]

WAC 220-100-060 Summary of information which may be required of a private applicant. (1) The applicant for each proposal for which the department is the lead agency shall submit a complete environmental checklist along with a complete application for the required approval.

(2) After review of the environmental checklist, the department may require the applicant to submit additional information necessary to properly evaluate the potential environmental impacts of the project. Field investigation or research may be required of the applicant or conducted by the department at the applicant's cost.

(3) Preparation of EISs is the responsibility of the department's environmental services division. The responsible official shall be satisfied that all EISs issued by the department are in compliance with these rules and chapter 197-11 WAC.

(4) Whenever someone other than the department prepares an EIS the responsible official shall:

(a) Coordinate scoping to insure that the individual preparing the document receives all substantive information submitted by any agency or person.

(b) Direct the areas of research and study to be undertaken and the content and organization of the document.

(c) Assist in obtaining information on file with another agency that is needed by the person preparing the document.

(5) The responsible official may not require more information of a private applicant than allowed by these rules as supplemented and required by chapter 197-11 WAC.

(6) An EIS is required for each project for which a determination is made that the proposal will have a probable significant adverse impact on the environment. The applicant may prepare the EIS if judged by the department to be qualified, have the department develop the EIS, or hire a consultant to do so. In any case, the EIS shall be prepared under the direction of the responsible official at the expense of the applicant and final approval is that of the responsible official. Cost of preparing the EIS shall be paid by the applicant and

shall include fees of the consultant, the department consultation time and cost of any required materials. If the applicant chooses to hire a consultant to prepare the EIS, the consultant must be mutually agreed upon by the applicant and the department. A performance bond in an amount specified by the department may be required of the applicant to ensure payment of the department expenses pursuant to WAC 197-11-914. Private applicants are encouraged to be involved in the EIS preparation process.

(7) A supplemental EIS shall be prepared as an addition to the EIS if the department decides that:

(a) There are substantial changes to a proposal which will have a probable significant adverse environmental impact; or

(b) There is significant new information relative to the probable significant environmental impact of a proposal.

(c) Pursuant to WAC 197-11-600 (3)(c), written comments on the DEIS warrant additional discussion for purposes of its action than that found in the FEIS.

WAC 220-100-065 Assumption of lead agency status.

(1) Whenever the department is an agency of jurisdiction and determines that a DNS issued by another lead agency is inappropriate and that the proposal in question could cause significant harm to the resources under its jurisdiction, the department may assume lead agency status per WAC 197-11-948.

(2) Within ten days of assuming lead agency status, the department will notify the proponent of the proposal in writing as to the reasons for its assumption of lead agency status.

(3) Prior to preparation of an EIS for the proposal, the department will consult with the proponent and give the proponent an opportunity to modify or change the proposal in such a way that an EIS may not be necessary as outlined in WAC 197-11-360(4).

[Statutory Authority: RCW 77.12.047. 03-10-038 (Order 03-83), § 220-100-065, filed 4/30/03, effective 5/31/03. Statutory Authority: RCW 75.08.080. 84-19-053 (Order 84-144), § 220-100-065, filed 9/18/84.]

(2) To obtain a hearing, a written request must be filed with the department. The mailing address is: Washington Department of Fish and Wildlife, Habitat Program, 600 Capitol Way North, Olympia, WA 98501-1091. Requests must be filed within thirty days of the department's decision.

(3) The request must be plainly labeled, "request for a formal administrative appeal" and must state within the body of the letter:

(a) The name, address, and phone number of the person requesting the appeal;

(b) The specific agency action that the person contests;

(c) Whether the person is the proponent of the proposal or other basis for interest in the agency action in question;

(d) The date of the SEPA determination;

(e) The attorney's name, address, and phone number, if the person is represented by legal counsel.

(4) The appeal may be conducted by the director, the director's designee, or by an administrative law judge (ALJ) appointed by the office of administrative hearings. If conducted by an ALJ, the ALJ shall issue an initial order pursuant to RCW 34.05.461. The director or the director's designee shall review the initial order and enter a final order as provided by RCW 34.05.464. All hearings conducted by the director, the director's designee, or an ALJ pursuant to this subsection shall comply with the Administrative Procedure Act and the model rules of procedure, chapter 10-08 WAC.

WAC 220-100-070 Designation of responsible official. Under normal circumstances, the responsible official is the SEPA/NEPA coordinator or the habitat program's designee. The responsible official shall carry out duties and functions for the purpose of assuring the department's compliance with SEPA and SEPA rules. The responsible official may delegate duties and functions assigned under this chapter and chapter 197-11 WAC. When significant involvements of the department converge at a level higher than the SEPA/NEPA coordinator, the director or the director's designee may be assigned the role of responsible official.

[Statutory Authority: RCW 77.12.047. 03-10-038 (Order 03-83), § 220-100-070, filed 4/30/03, effective 5/31/03. Statutory Authority: RCW 75.08.080. 84-19-053 (Order 84-144), § 220-100-070, filed 9/18/84; Order 76-40, § 220-100-070, filed 5/25/76.]

WAC 220-100-075 Mitigated DNS. (1) An applicant may ask the department whether issuance of a DS is likely for a proposal. This request for early notice must:

(a) Be written;

(b) Follow submission of a permit application and environmental checklist for a nonexempt proposal for which the department is lead agency; and

(c) Precede the department's actual threshold determination for the proposal.

(2) The responsible official shall respond to the request within twenty working days of receipt of the letter; the response shall:

(a) Be written;

(b) State whether the department is considering issuance of a DS;

(c) Indicate the general or specific area(s) of concern that led the department to consider a DS; and

(d) State that the applicant may change or clarify the proposal to mitigate the impacts indicated in the letter, revising the environmental checklist as necessary to reflect the changes or clarifications.

(3) The department shall not continue with the threshold determination until receiving a written response from the applicant changing or clarifying the proposal or asking that the threshold determination be based on the original proposal.

(4) If the applicant submits a changed or clarified proposal, along with a revised environmental checklist, the

department will make its threshold determination based on the changed or clarified proposal. The application is not complete until the applicant responds to subsection (3) of this section.

(a) If the department response to the request for early notice indicated specific mitigation measures that would remove all probable significant adverse environmental impacts, and the applicant changes or clarifies the proposal to include all of those specific mitigation measures, the department shall issue a DNS and circulate the DNS for comments as in WAC 197-11-340(2).

(b) If the department indicated general or specific areas of concern, but did not indicate specific mitigation measures that would allow it to issue a DNS, the department shall determine if the changed or clarified proposal may have a probable significant environmental impact, issuing a DNS or DS as appropriate.

(5) The department may specify mitigation measures that would allow it to issue a DNS without a request for early notice from an applicant. If it does so, and the applicant changes or clarifies the proposal to include those measures, the department shall issue a DNS and circulate it for review under WAC 197-11-340(2).

(6) When an applicant changes or clarifies the proposal, the clarifications or changes may be included in written attachments to the documents already submitted. If the environmental checklist and supporting documents would be difficult to read and/or understand because of the need to read them in conjunction with the attachment(s), the department may require the applicant to submit a new checklist.

(7) The department may change or clarify features of its own proposals before making the threshold determination.

(8) The department's written response under subsection (2) of this section shall not be construed as a determination of significance. In addition, preliminary discussion of clarification of or changes to a proposal, as opposed to a written request for early notice, shall not bind the department to consider the clarification or changes in the threshold determination.

(9) When an applicant submits a changed or clarified proposal pursuant to this section, it shall be considered part of the applicant's application for a permit or other approval for all purposes. Unless the department's decision expressly states otherwise, when a mitigated DNS is issued for a proposal, any decision approving the proposal shall be based on the proposal as changed or clarified pursuant to this section.

WAC 220-110-010 Purpose. It is the intent of the department to provide protection for all fish life through the development of a statewide system of consistent and predictable rules. The department will coordinate with other local, state, and federal regulatory agencies, and tribal governments, to minimize regulatory duplication. Pursuant to chapter 75.20 RCW, this chapter establishes regulations for the construction of hydraulic project(s) or performance of other work that will use, divert, obstruct, or change the natural flow or bed of any of the salt or fresh waters of the state, and sets forth procedures for obtaining a hydraulic project approval (HPA). In addition, this chapter incorporates criteria generally used by the department for project review and conditioning HPAs.

The technical provisions in WAC 220-110-040 through 220-110-338 represent common provisions for the protection of fish life for typical projects proposed to the department. Implementation of these provisions is necessary to minimize project specific and cumulative impacts to fish life. These regulations reflect the best available science and practices related to protection of fish life. The department will incorporate new information as it becomes available, and to allow for alternative practices that provide equal or greater protection for fish life.

The technical provisions shall apply to a hydraulic project when included as provisions on the HPA. Each application shall be reviewed on an individual basis. Common technical provisions applicable to a specific project may be modified or deleted by the department pursuant to WAC 220-110-032. HPAs may also be subject to additional special provisions to address project or site-specific considerations not adequately addressed by the common technical provisions.

(81) "Toe of the bank" means the distinct break in slope between the stream bank or shoreline and the stream bottom or marine beach or bed, excluding areas of sloughing. For steep banks that extend into the water, the toe may be submerged below the ordinary high water line. For artificial structures, such as jetties or bulkheads, the toe refers to the base of the structure, where it meets the stream bed or marine beach or bed.

(82) "Viable" means that any plant or plant part is capable of taking root or living when introduced into a body of water.

(83) "Watercourse" and "river or stream" means any portion of a channel, bed, bank, or bottom waterward of the ordinary high water line of waters of the state including areas in which fish may spawn, reside, or through which they may pass, and tributary waters with defined bed or banks, which influence the quality of fish habitat downstream. This includes watercourses which flow on an intermittent basis or which fluctuate in level during the year and applies to the entire bed of such watercourse whether or not the water is at peak level. This definition does not include irrigation ditches, canals, storm water run-off devices, or other entirely artificial watercourses, except where they exist in a natural watercourse which has been altered by humans.

(84) "Water right" means a certificate of water right, a vested water right or a claim to a valid vested water right, or a water permit, pursuant to Title 90 RCW.

(85) "Waters of the state" or "state waters" means all salt waters and fresh waters waterward of ordinary high water lines and within the territorial boundaries of the state.

(86) "Water type" means water categories as defined in WAC 222-16-030 of the forest practice rules and regulations.

(87) "Weed rolling" means the use of a mechanical roller designed to control aquatic plant growth.

(88) "Wetted perimeter" means the areas of a watercourse covered with water, flowing or nonflowing.

WAC 220-110-030 Hydraulic project approvals—Procedures. (1) A person shall obtain an HPA before conducting a hydraulic project.

(2) A person seeking an HPA shall submit a complete application to the department. The application shall contain general plans for the overall project, complete plans and specifications for the proposed construction or work waterward of the mean higher high water line in salt water or waterward of the ordinary high water line in fresh water, and complete plans and specifications for the proper protection of fish life. The application shall be signed and dated by the applicant or their agent.

(3) Receipt of any one of the following documents constitutes application for an HPA:

(a) A completed hydraulic project application submitted to the department;

(b) A completed forest practice application submitted to the department of natural resources, if the hydraulic project is part of a forest practice as defined in WAC 222-16-010; or

(c) A section 10 or 404 public notice circulated by the United States Army Corps of Engineers or United States Coast Guard.

(4) The department shall grant or deny approval within forty-five calendar days of the receipt of a complete application and notice of compliance with any applicable requirements of the State Environmental Policy Act (SEPA) (chapter 43.21C RCW). The department shall strive to issue HPAs in less than thirty days. The forty-five day requirement shall be suspended if:

(a) An incomplete application is received;

(b) The site is physically inaccessible for inspection;

(c) After ten working days of receipt of the application, the applicant remains unavailable or unable to arrange for a timely field evaluation of the proposed project;

(d) The applicant requests delay.

(5) Immediately upon determination that the forty-five day period is suspended, the department shall notify the applicant in writing of the reasons for the delay.

(6) The department may issue an expedited written HPA in those instances where normal processing would result in unanticipated extreme hardship for the applicant, or unacceptable environmental damage would occur. An expedited HPA may be granted upon request for work to repair existing structures, move obstructions, restore banks, protect property, or protect fish resources that are subject to imminent danger by weather, flow, or other natural conditions. Expedited HPA requests require complete written application and shall take precedence over other nonemergency applications and will normally be issued within ten calendar days of request. All SEPA requirements shall be met prior to issuance of an expedited HPA.

(7) Verbal approval shall be granted immediately upon request for emergency work to repair existing structures, move obstructions, restore banks, or protect property that is subject to immediate danger by weather, flow, or other natural conditions. Verbal approval shall be granted immediately

upon request for driving across a stream during an emergency, as defined in WAC 220-110-020.

(8) The department may accept written or verbal requests for time extensions, renewals, or alterations of an existing HPA. Approvals of such requests shall be in writing. Transfer of an HPA to a new permittee requires written request by the original permittee or their agent and such request shall include the HPA number. This written request shall be in a form acceptable to the department and shall contain an affirmation by the new permittee that he/she agrees to be bound by the conditions on the HPA. Project activity shall not be conducted by the new permittee until approval has been issued by the department.

(9) Each HPA is usually specific to a watercourse, stating the exact location of the project site, and usually consists of general, technical, and special provisions.

(10) The written HPA, or clear reproduction, shall be on the project site when work is being conducted and shall be immediately available for inspection.

(11) All HPAs may be granted for a period of up to five years. Permittees shall demonstrate substantial progress on construction of that portion of the project relating to the (HPA) within two years of the date of issuance. The following types of HPAs issued under RCW 75.20.103 shall remain in effect without the need for periodic renewal provided the permittee notifies the department before commencing the work each year.

(a) Work of a seasonal nature that diverts water for irrigation or stock watering purposes.

(b) Streambank stabilization projects if the problem causing the erosion occurs on an annual or more frequent basis as demonstrated by the applicant. Evidence of erosion may include, but is not limited to history of permit application, approval, or photographs. Periodic flood waters by themselves do not constitute the problem that requires a HPA.

(12) A hydraulic project application shall be denied when, in the judgment of the department, the project will result in direct or indirect harm to fish life unless adequate mitigation can be assured by conditioning the HPA or modifying the proposal. If approval is denied, the department shall provide the applicant, in writing, a statement of the specific reason(s) why and how the proposed project would adversely affect fish life.

(13) Protection of fish life shall be the only grounds upon which an HPA may be denied or conditioned.

(14) HPAs may have specific time limitations on project activities to protect fish life.

(15) HPAs do not exempt the applicant from obtaining other appropriate permits and following the rules or regulations of local, federal, and other Washington state agencies.

(16) Administration of this chapter shall be conducted in compliance with SEPA, chapter 43.21C RCW, and chapters 197-11, 220-100, and 232-19 WAC.

(17) All HPAs issued pursuant to RCW 75.20.100 and 75.20.160 may be subject to additional restrictions, conditions, or revocation if the department determines that new biological or physical information indicates the need for such action. The permittee has the right to request an informal or formal appeal in accordance with chapter 34.05 RCW. All HPAs issued pursuant to RCW 75.20.103 may be modified

by the department due to changed conditions after consultation with the permittee: Provided however, That modifications of HPAs issued pursuant to RCW 75.20.103 and 75.20.160 shall be subject to appeal to the hydraulic appeals board established in RCW 75.20.130.

WAC 220-110-031 Pamphlet hydraulic project approvals—Procedures. (1) In those instances where a pamphlet is the equivalent of an HPA as defined in WAC 220-110-020(44), a person shall obtain a pamphlet HPA issued by the department which identifies and authorizes specific minor hydraulic project activities before conducting a hydraulic project.

(2) Supplemental approvals to the pamphlet HPA as defined in WAC 220-110-020(44) and 220-110-020(78) shall require written authorization by the department.

(3) Applications submitted to the department for supplemental approvals may be verbal or written.

(a) Applications shall specify the requested exception or request for additional authorization and shall include the applicant's name, address and phone number. Written applications shall be signed and dated.

(b) The department shall grant or deny approval within forty-five calendar days of the receipt of a request for supplemental approval.

(4) The supplemental approval shall be attached to the pamphlet HPA and shall be on the job site when work is being conducted and shall be immediately available for inspection.

(5) The pamphlet HPA, or clear reproduction, shall be on the job site when work is being conducted and shall be immediately available for inspection.

(6) The pamphlet HPA shall be conditioned to ensure protection of fish life.

(7) Pamphlet HPAs do not exempt the applicant from obtaining other appropriate permits and following the rules or regulations of local, federal, and other Washington state agencies.

WAC 220-110-032 Modification of technical provisions. Technical provisions applicable to a specific project may be modified or deleted by the department where any of the following is demonstrated:

(1) The provision has no logical application to a project;

(2) The applicant provides an alternate plan to the provision and demonstrates that it provides equal or greater protection for fish life;

(3) Enforcement of the provision would result in denial and there is adequate mitigation to allow the project and achieve no-net-loss of fish life or productive fish or shellfish habitat;

(4) The modification or deletion of the provision will not contribute to net loss of fish life;

(5) The proposal is part of an approved clean-up action under Model Toxics Control Act; Comprehensive Environmental Response Compensation and Liability Act; or Superfund Amendment and Reauthorization Act; or

(6) The technical provisions conflict with applicable local, state, or federal regulations that provide adequate protection for fish life.

HPAs may also be subject to additional special provisions to address project or site-specific considerations not adequately addressed by the technical provisions, or to implement management prescriptions developed through watershed analysis. The HPA will include all of the technical provisions with which an applicant will be required to comply.

[Statutory Authority: RCW 75.08.080, 94-23-058 (Order 94-160), § 220-110-032, filed 11/14/94, effective 12/15/94.]

WAC 220-110-035 Miscellaneous hydraulic projects—Permit requirements and exemptions. (1) Operators of mechanical or hydraulic clam harvesters shall be required to obtain an HPA and comply with provisions of WAC 220-52-018, and shall obtain and comply with the provisions of the department's permit to operate a clam harvesting machine.

(2) An activity conducted solely for the removal or control of spartina does not require an HPA. An activity conducted solely for the removal or control of purple loosestrife and which is performed with hand-held tools, hand-held equipment, or equipment carried by a person when used does not require an HPA. Any other activity conducted solely for the removal or control of aquatic noxious weeds or aquatic beneficial plants shall require either a copy of the current *Aquatic Plants and Fish* pamphlet HPA available from the department or an individual HPA.

(3) The installation, by hand or hand-held tools, of small scientific markers, oyster stakes, boundary markers, or property line markers does not require an HPA.

(4) Driving a vehicle or operating equipment on or across an established ford does not require an HPA. However, ford repair with equipment or construction work waterward of the ordinary high water lines requires an HPA. Driving a vehicle or operating equipment on or across wetted stream beds at areas other than established fords requires an HPA. HPAs for new fords issued subsequent to January 1995 shall require that the entry and exit points of the ford not exceed one hundred feet upstream or downstream of each other.

(5) A person conducting a remedial action under a consent decree, order, or agreed order, pursuant to chapter 70.105D RCW, and the department of ecology when it conducts a remedial action, are exempt from the procedural requirements of the Hydraulic Code. Compliance with the substantive provisions of the Hydraulic Code is required.

(6) The technical and special provisions of an individual or a pamphlet HPA shall be followed by the permit holder,

[Title 220 WAC—p. 178]

equipment operator(s), and other individuals conducting the project.

(7) The legislature expressed the intent in RCW 76.09.-030(2) for closer integration of the forest practices and hydraulics permitting processes. Pursuant to chapter 76.09 RCW, the forest practices board has adopted rules that include fish protection measures normally included in hydraulic project approvals for projects in nonfish bearing waters. Based on the fish protection measures contained in chapters 222-16, 222-24 and 222-30 WAC, and fish protection measures contained in the forest practices board manual described in WAC 222-12-090, forest practices, as defined in chapter 76.09 RCW, conducted under an approved forest practices application or notification issued by the department of natural resources, and conducted in or across type Np or Ns waters as defined in WAC 222-16-030 (Type 4 or Type 5 Waters, respectively, as defined in WAC 222-16-031), do not require an HPA.

WAC 220-110-040 Freshwater technical provisions. WAC 220-110-050 through 220-110-225 set forth technical provisions that shall apply to freshwater hydraulic projects. Certain technical provisions shall be required depending upon the individual proposal and site specific characteristics. Additional special provisions may be included as necessary to address site-specific conditions. Those provisions, where applicable, shall be contained in the hydraulic project approval, as necessary to protect fish life. Saltwater provisions referenced in WAC 220-110-230 through 220-110-330 may be applied to tidally influenced areas upstream of river mouths and the mainstem Columbia River downstream of Bonneville Dam, where applicable.

WAC 220-110-050 Bank protection. Bio-engineering is the preferred method of bank protection where practicable. Bank protection projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to bank protection projects:

(1) Bank protection work shall be restricted to work necessary to protect eroding banks.

(2) Bank protection material placement waterward of the ordinary high water line shall be restricted to the minimum amount necessary to protect the toe of the bank, or for installation of mitigation features approved by the department.

(3) The toe shall be designed to protect the integrity of bank protection material.

(4) Bank sloping shall be accomplished in a manner that avoids release of overburden material into the water. Overburden material resulting from the project shall be deposited so as not to reenter the water.

(5) Alteration or disturbance of the bank and bank vegetation shall be limited to that necessary to construct the

(2005 Ed.)

project. All disturbed areas shall be protected from erosion, within seven calendar days of completion of the project, using vegetation or other means. The banks, including riprap areas, shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. The requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors preclude them.

(6) Fish habitat components such as logs, stumps, and/or large boulders may be required as part of the bank protection project to mitigate project impacts. These fish habitat components shall be installed according to an approved design to withstand 100-year peak flows.

(7) When rock or other hard materials are approved for bank protection, the following provisions shall apply:

(a) Bank protection material shall be angular rock. The project shall be designed and the rock installed to withstand 100-year peak flows. River gravels shall not be used as exterior armor, except as specifically approved by the department.

(b) Bank protection and filter blanket material shall be placed from the bank or a barge. Dumping onto the bank face shall be permitted only if the toe is established and the material can be confined to the bank face.

WAC 220-110-060 Construction of freshwater docks, piers, and floats and the driving or removal of piling. All pier, dock, float, and piling construction projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to freshwater dock, pier, and float construction projects and the driving or removal of piling:

(1) Excavation for and placement of the footings and foundation shall be landward of the ordinary high water line unless the construction site is separated from state waters by use of an approved dike, cofferdam, or similar structure.

(2) Alteration or disturbance of the bank and bank vegetation shall be limited to that necessary to construct the project. All disturbed areas shall be protected from erosion, within seven days of completion of the project, using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. The requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors preclude them.

(2005 Ed.)

(3) Removal of existing or temporary structures shall be accomplished so that the structure and associated material does not reenter the watercourse.

(4) All piling, lumber, or other materials treated with preservatives shall be sufficiently cured to minimize leaching into the water or bed. The use of wood treated with creosote or pentachlorophenol is not allowed in lakes.

(5) Skirting or other structures shall not be constructed around piers, docks, or floats unless specifically approved in the HPA.

(6) Floatation for the structure shall be enclosed and contained, when necessary, to prevent the breakup or loss of the floatation material into the water.

(7) All work operations shall be conducted in such a manner that causes little or no siltation to adjacent areas. If at any time, fish are observed in distress, a fish kill occurs, or water quality problems develop as a result of a pier, dock, float, or piling project, construction operations shall cease and the permittee or authorized agent shall immediately contact the department.

(8) Removal of aquatic vegetation shall be limited to that necessary to gain access to construct the project.

[Statutory Authority: RCW 75.08.080, 94-23-058 (Order 94-160), § 220-110-060, filed 11/14/94, effective 12/15/94; 87-15-086 (Order 87-48), § 220-110-060, filed 7/20/87. Statutory Authority: RCW 75.20.100 and 75.08.080, 83-09-019 (Order 83-25), § 220-110-060, filed 4/13/83.]

WAC 220-110-070 Water crossing structures. In fish bearing waters, bridges are preferred as water crossing structures by the department in order to ensure free and unimpeded fish passage for adult and juvenile fishes and preserve spawning and rearing habitat. Pier placement waterward of the ordinary high water line shall be avoided, where practicable. Other structures which may be approved, in descending order of preference, include: Temporary culverts, bottomless arch culverts, arch culverts, and round culverts. Corrugated metal culverts are generally preferred over smooth surfaced culverts. Culvert baffles and downstream control weirs are discouraged except to correct fish passage problems at existing structures.

An HPA is required for construction or structural work associated with any bridge structure waterward of or across the ordinary high water line of state waters. An HPA is also required for bridge painting and other maintenance where there is potential for wastage of paint, sandblasting material, sediments, or bridge parts into the water, or where the work, including equipment operation, occurs waterward of the ordinary high water line. Exemptions/5-year permits will be considered if an applicant submits a plan to adhere to practices that meet or exceed the provisions otherwise required by the department.

Water crossing structure projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to water crossing structures:

(1) Bridge construction.

(a) Excavation for and placement of the foundation and superstructure shall be outside the ordinary high water line unless the construction site is separated from waters of the state by use of an approved dike, cofferdam, or similar structure.

(b) The bridge structure or stringers shall be placed in a manner to minimize damage to the bed.

(c) Alteration or disturbance of bank or bank vegetation shall be limited to that necessary to construct the project. All disturbed areas shall be protected from erosion, within seven calendar days of completion of the project, using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. The requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors preclude them.

(d) Removal of existing or temporary structures shall be accomplished so that the structure and associated material does not enter the watercourse.

(e) The bridge shall be constructed, according to the approved design, to pass the 100-year peak flow with consideration of debris likely to be encountered. Exception shall be granted if applicant provides hydrologic or other information that supports alternative design criteria.

(f) Wastewater from project activities and water removed from within the work area shall be routed to an area landward of the ordinary high water line to allow removal of fine sediment and other contaminants prior to being discharged to state waters.

(g) Structures containing concrete shall be sufficiently cured prior to contact with water to avoid leaching.

(h) Abutments, piers, piling, sills, approach fills, etc., shall not constrict the flow so as to cause any appreciable increase (not to exceed .2 feet) in backwater elevation (calculated at the 100-year flood) or channel wide scour and shall be aligned to cause the least effect on the hydraulics of the watercourse.

(i) Riprap materials used for structure protection shall be angular rock and the placement shall be installed according to an approved design to withstand the 100-year peak flow.

(2) Temporary culvert installation.

The allowable placement of temporary culverts and time limitations shall be determined by the department, based on the specific fish resources of concern at the proposed location of the culvert.

(a) Where fish passage is a concern, temporary culverts shall be installed according to an approved design to provide adequate fish passage. In these cases, the temporary culvert installation shall meet the fish passage design criteria in Table 1 in subsection (3) of this section.

(b) Where culverts are left in place during the period of September 30 to June 15, the culvert shall be designed to maintain structural integrity to the 100-year peak flow with consideration of the debris loading likely to be encountered.

(c) Where culverts are left in place during the period June 16 to September 30, the culvert shall be designed to maintain structural integrity at a peak flow expected to occur once in 100 years during the season of installation.

(d) Disturbance of the bed and banks shall be limited to that necessary to place the culvert and any required channel modification associated with it. Affected bed and bank areas

outside the culvert shall be restored to preproject condition following installation of the culvert.

(e) The culvert shall be installed in the dry, or in isolation from stream flow by the installation of a bypass flume or culvert, or by pumping the stream flow around the work area. Exception may be granted if siltation or turbidity is reduced by installing the culvert in the flowing stream. The bypass reach shall be limited to the minimum distance necessary to complete the project. Fish stranded in the bypass reach shall be safely removed to the flowing stream.

(f) Wastewater, from project activities and dewatering, shall be routed to an area outside the ordinary high water line to allow removal of fine sediment and other contaminants prior to being discharged to state waters.

(g) Imported fill which will remain in the stream after culvert removal shall consist of clean rounded gravel ranging in size from one-quarter to three inches in diameter. The use of angular rock may be approved from June 16 to September 30, where rounded rock is unavailable. Angular rock shall be removed from the watercourse and the site restored to pre-project conditions upon removal of the temporary culvert.

(h) The culvert and fill shall be removed, and the disturbed bed and bank areas shall be reshaped to preproject configuration. All disturbed areas shall be protected from erosion, within seven days of completion of the project, using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. The requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors need to be considered.

(i) The temporary culvert shall be removed and the approaches shall be blocked to vehicular traffic prior to the expiration of the HPA.

(j) Temporary culverts may not be left in place for more than two years from the date of issuance of the HPA.

(3) Permanent culvert installation.

(a) In fish bearing waters or waters upstream of a fish passage barrier (which can reasonably be expected to be corrected, and if corrected, fish presence would be reestablished), culverts shall be designed and installed so as not to impede fish passage. Culverts shall only be approved for installation in spawning areas where full replacement of impacted habitat is provided by the applicant.

(b) To facilitate fish passage, culverts shall be designed to the following standards:

(i) Culverts may be approved for placement in small streams if placed on a flat gradient with the bottom of the culvert placed below the level of the streambed a minimum of twenty percent of the culvert diameter for round culverts, or twenty percent of the vertical rise for elliptical culverts (this depth consideration does not apply within bottomless culverts). Footings of bottomless culverts shall be buried sufficiently deep so they will not become exposed by scour within the culvert. The twenty percent placement below the streambed shall be measured at the culvert outlet. The culvert

width at the bed, or footing width, shall be equal to or greater than the average width of the bed of the stream.

(ii) Where culvert placement is not feasible as described in (b)(i) of this subsection, the culvert design shall include the elements in (b)(ii)(A) through (E) of this subsection:

(A) Water depth at any location within culverts as installed and without a natural bed shall not be less than that identified in Table 1. The low flow design, to be used to determine the minimum depth of flow in the culvert, is the two-year seven-day low flow discharge for the subject basin or ninety-five percent exceedance flow for migration months of the fish species of concern. Where flow information is unavailable for the drainage in which the project will be conducted, calibrated flows from comparable gauged drainages may be used, or the depth may be determined using the installed no-flow condition.

(B) The high flow design discharge, used to determine maximum velocity in the culvert (see Table 1), is the flow that is not exceeded more than ten percent of the time during the months of adult fish migration. The two-year peak flood flow may be used where stream flow data are unavailable.

(C) The hydraulic drop is the abrupt drop in water surface measured at any point within or at the outlet of a culvert. The maximum hydraulic drop criteria must be satisfied at all flows between the low and high flow design criteria.

(D) The bottom of the culvert shall be placed below the natural channel grade a minimum of twenty percent of the culvert diameter for round culverts, or twenty percent of the vertical rise for elliptical culverts (this depth consideration does not apply within bottomless culverts). The downstream bed elevation, used for hydraulic calculations and culvert placement in relation to bed elevation, shall be taken at a point downstream at least four times the average width of the stream (this point need not exceed twenty-five feet from the downstream end of the culvert). The culvert capacity for flood design flow shall be determined by using the remaining capacity of the culvert.

Table 1
Fish Passage Design Criteria for Culvert Installation

Criteria	Adult Trout >6 in. (150mm)	Adult Pink, Chum Salmon	Adult Chinook, Coho, Sockeye, Steelhead
1. Velocity, Maximum (fps)			
Culvert Length (ft)			
a. 10 - 60	4.0	5.0	6.0
b. 60 - 100	4.0	4.0	5.0
c. 100 - 200	3.0	3.0	4.0
d. > 200	2.0	2.0	3.0
2. Flow Depth Minimum (ft)	0.8	0.8	1.0
3. Hydraulic Drop, Maximum (ft)	0.8	0.8	1.0

(E) Appropriate statistical or hydraulic methods must be applied for the determination of flows in (b)(ii)(A) and (B) of this subsection. These design flow criteria may be modified for specific proposals as necessary to address unusual fish passage requirements, where other approved methods of empirical analysis are provided, or where the fish passage

(2005 Ed.)

provisions of other special facilities are approved by the department.

(F) Culvert design shall include consideration of flood capacity for current conditions and future changes likely to be encountered within the stream channel, and debris and bedload passage.

(c) Culverts shall be installed according to an approved design to maintain structural integrity to the 100-year peak flow with consideration of the debris loading likely to be encountered. Exception may be granted if the applicant provides justification for a different level or a design that routes that flow past the culvert without jeopardizing the culvert or associated fill.

(d) Disturbance of the bed and banks shall be limited to that necessary to place the culvert and any required channel modification associated with it. Affected bed and bank areas outside the culvert and associated fill shall be restored to pre-project configuration following installation of the culvert, and the banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. The requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors preclude them.

(e) Fill associated with the culvert installation shall be protected from erosion to the 100-year peak flow.

(f) Culverts shall be designed and installed to avoid inlet scouring and shall be designed in a manner to prevent erosion of streambanks downstream of the project.

(g) Where fish passage criteria are required, the culvert facility shall be maintained by the owner(s), such that fish passage design criteria in Table 1 are not exceeded. If the structure becomes a hindrance to fish passage, the owner shall be responsible for obtaining a HPA and providing prompt repair.

(h) The culvert shall be installed in the dry or in isolation from the stream flow by the installation of a bypass flume or culvert, or by pumping the stream flow around the work area. Exception may be granted if siltation or turbidity is reduced by installing the culvert in the flowing stream. The bypass reach shall be limited to the minimum distance necessary to complete the project. Fish stranded in the bypass reach shall be safely removed to the flowing stream.

(i) Wastewater, from project activities and dewatering, shall be routed to an area outside the ordinary high water line to allow removal of fine sediment and other contaminants prior to being discharged to state waters.

WAC 220-110-080 Channel change/realignment. Channel changes/realignments are generally discouraged, and shall only be approved where the applicant can demonstrate benefits or lack of adverse impact to fish life. Channel change/realignment projects shall incorporate mitigation

measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to channel change and channel realignment projects:

When approved, a channel change may occur provided:

(1) Permanent new channels shall, at a minimum, be similar in length, width, depth, floodplain configuration, and gradient, as the old channel. The new channel shall incorporate fish habitat components, bed materials, meander configuration, and native or other approved vegetation equivalent to or greater than that which previously existed in the old channel.

(2) During construction, the new channel shall be isolated from the flowing stream by plugs at the upstream and downstream ends of the new channel.

(3) Before water is diverted into a permanent new channel, the applicant shall complete the following actions:

(a) Approved fish habitat components, bed materials and bank protection to prevent erosion shall be in place.

(b) Approved fish habitat components shall be installed according to an approved design to withstand the 100-year peak flows.

(4) All disturbed areas shall be protected from erosion, within seven days of completion of the project, using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. The requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors preclude them.

(5) Diversion of flow into a new channel shall be accomplished by: (a) First removing the downstream plug; (b) removing the upstream plug; and (c) closing the upstream end of the old channel.

(6) Filling of the old channel shall begin from the upstream closure and the fill material shall be compacted. Water discharging from the fill shall not adversely impact fish life.

(7) The angle of the structure used to divert the water into the new channel shall allow a smooth transition of water flow.

(8) If fish may be adversely impacted as a result of this project, the permittee will be required to capture and safely move food fish, game fish or other fish life (at the discretion of the department) to the nearest free-flowing water. The permittee may request the department to assist in capturing and safely moving fish life from the job site to free-flowing water, and assistance may be granted if personnel are available.

WAC 220-110-100 Conduit crossing. Conduit crossing projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and

shellfish habitat. An HPA is not required for conduit crossings attached to bridge structures. The following technical provisions shall apply to conduit crossing projects:

(1) Conduit alignment shall be as nearly perpendicular to the watercourse as possible.

(2) The conduit shall be installed at sufficient depth so that subsequent disturbance of the bed of the watercourse is avoided.

(3) If the method used is boring or jacking:

(a) Pits shall be isolated from surface water flow;

(b) Wastewater, from project activities and dewatering, shall be routed to an area outside the ordinary high water line to allow removal of fine sediment and other contaminants prior to being discharged to state waters.

(4) If the method used is trench excavation:

(a) Trenches shall be excavated in the dry or shall be isolated from the flowing watercourse by the installation of a cofferdam, culvert, flume, or other approved method;

(b) Plowing, placement, and covering shall occur in a single pass of the equipment;

(c) Disturbance of the bed as a result of the plowing operation shall be limited to the amount necessary to complete the project.

(5) Trenches shall be backfilled with approved materials and the bed shall be returned to preproject condition.

(6) Excess spoils shall be disposed of so as not to reenter the watercourse.

(7) The conduit approach trench shall be isolated from the watercourse until laying of the conduit across the watercourse takes place.

(8) Alteration or disturbance of the banks and bank vegetation shall be limited to that necessary to construct the project. All disturbed areas shall be protected from erosion within seven days of completion of the project, using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. WAC 220-110-120 Temporary bypass culvert, flume, or channel. Temporary bypass culvert, flume, or channel projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to temporary bypass culvert, flume, or channel projects:

(1) The temporary bypass culvert, flume, or channel shall be in place prior to initiation of other work in the wetted perimeter.

(2) A sandbag revetment or similar device shall be installed at the inlet to divert the entire flow through the culvert, flume, or channel.

(3) A sandbag revetment or similar device shall be installed at the downstream end of the culvert, flume, or channel to prevent backwater from entering the work area.

(4) The culvert, flume, or channel shall be of sufficient size to pass flows and debris for the duration of the project.

(5) For diversion of flow into a temporary channel the relevant provisions of WAC 220-110-080 shall apply.

(6) Prior to releasing the water flow to the project area, all bank protection or armoring shall be completed.

(7) Upon completion of the project, all material used in the temporary bypass shall be removed from the site and the site returned to preproject conditions.

(8) If fish may be adversely impacted as a result of this project, the permittee shall be required to capture and safely move game and food fish and other fish life, (at the discretion of the department), from the job site to the nearest free-flowing water. The permittee may request the department to assist in capturing and safely moving fish life from the job site to free-flowing water, and assistance may be granted if personnel are available.

(9) Alteration or disturbance of the banks and bank vegetation shall be limited to that necessary to construct the project. All disturbed areas shall be protected from erosion, within seven days of completion of the project, using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. WAC 220-110-130 Dredging in freshwater areas.

Dredging projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to dredging projects:

(1) Dredging shall not be conducted in fish spawning areas unless it is designed to create or improve the access or quality of fish spawning areas.

(2) During the dredging of a lake or pond, a boom or similar device may be required to contain floatable materials.

(3) Dredged bed materials shall be disposed of at approved in-water disposal sites or upland so as not to reenter state waters. The department may allow placement of dredged material in areas for beneficial uses such as beach nourishment or capping of contaminated sediments.

(4) Dredging shall be conducted with dredge types and methods that cause the least adverse impact to fish and shellfish and their habitat.

(5) If at any time, fish are observed in distress, a fish kill occurs, or water quality problems develop as a result of dredging, operations shall cease immediately and the department shall be immediately contacted.

(6) An hydraulic dredge shall only be operated with the intake at or below the surface of the material being removed. The intake shall only be raised a maximum of three feet above the bed for brief periods of purging or flushing the intake system.

(7) If a dragline or clamshell is used, it shall be operated to minimize turbidity. During excavation, each pass with the clamshell or dragline bucket shall be complete. Dredged material shall not be stockpiled waterward of the ordinary high water line.

(8) Upon completion of the dredging, the bed shall not contain pits, potholes, or large depressions to avoid stranding of fish.

WAC 220-110-140 Gravel removal. Gravel removal projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to gravel removal projects:

(1) Gravel removal from a watercourse shall be limited to removal from exposed bars and shall not result in a lowering, over time, of the average channel cross-section profile through the project area or downstream. Additional removal of bed material, including removal from wetted portions of the channel, may be authorized where the project is an integral part of a comprehensive flood control plan approved by the department.

(2) An "excavation line" shall be established. "Excavation line" means a line on the dry bed, at or parallel to the water's edge, the distance from the water's edge to be determined by the department on a site-specific basis. The excavation line may change with water level fluctuations.

(3) An "excavation zone" shall be defined as the area between the "excavation line" and the bank or the center of the bar. The "excavation zone" shall be identified by boundary markers placed by the applicant and approved by the department prior to the commencement of gravel removal.

(4) Excavation shall begin at the excavation line and proceed toward the bank or the center of the bar, perpendicular to the alignment of the watercourse.

(5) Bed material shall not be removed from the water side of the excavation line.

(6) Equipment shall not enter or operate within the wetted perimeter of the watercourse.

(7) Gravel may be removed within the excavation zone from a point beginning at the excavation line and progressing upward toward the bank or the center of the bar on a minimum two percent gradient. It may be necessary to survey the excavation zone upon completion of the gravel removal operation to ensure the two percent gradient is maintained and that no depressions exist. When required the survey shall be made at the applicant's expense.

(8) Preproject and postproject channel cross-section surveys shall be required for gravel removal projects for commercial purposes, and may be required as part of a comprehensive flood control plan approved by the department. The cross-sections shall be referenced vertically to a permanent

bench mark and horizontally to a permanent base line, and shall be done perpendicular to the high flow channel every one hundred feet through the project area and at cross-sections upstream and downstream at adjacent channel riffles. The preproject survey information shall be submitted to the department at the time of application for HPA, and the post-project survey shall be submitted to the department within ninety days of completion of removal of gravel or the expiration date of the HPA, whichever occurs first.

(9) At the end of each work day the excavation zone shall not contain pits, or potholes, or depressions that may trap fish as a result of fluctuation in water levels.

(10) Stockpiling of material waterward of the ordinary high water line, after the initial bed disturbance, shall be limited to avoid impacts to fish life. If stockpiling is approved waterward of the ordinary high water line, the material shall be completely removed prior to the onset of fish spawning in the vicinity or the typical onset of increasing stream flows. Timing restrictions shall be determined on a site-specific basis. If the water level rises and makes contact with stockpiles, further operation of equipment or removal of the stockpiles shall not proceed unless authorized under a separate HPA issued by the department.

(11) The upstream end of the gravel bar shall be left undisturbed to maintain watercourse stability waterward of the ordinary high water line.

(12) Large woody material shall be retained waterward of the ordinary high water line and repositioned within the watercourse. Other debris shall be disposed of so as not to reenter the watercourse.

(13) Gravel washing or crushing operations shall not take place waterward of the ordinary high water line.

(14) Alteration or disturbance of the banks and bank vegetation shall be limited to that necessary to access the excavation zone. All disturbed areas shall be protected from erosion, within seven days of completion of the project, using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. The requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors preclude them.

(15) Equipment shall be inspected, cleaned, and maintained to prevent loss of petroleum products waterward of the ordinary high water line.

(16) The department shall be notified at least five working days before the start of actual gravel removal, and upon project completion to allow for compliance inspection.

[Statutory Authority: RCW 75.08.080, 94-23-058 (Order 94-160), § 220-110-140, filed 11/14/94, effective 12/15/94; 87-15-086 (Order 87-48), § 220-110-140, filed 7/20/87. Statutory Authority: RCW 75.20.100 and 75.08.080, 83-09-019 (Order 83-25), § 220-110-140, filed 4/13/83.]

WAC 220-110-150 Large woody material removal or repositioning. Large woody material removal or repositioning projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and

shellfish habitat. The following technical provisions shall apply to large woody material removal or repositioning:

(1) Large woody material removal from watercourses shall only be approved where necessary to address safety considerations, or its removal would not diminish the fish habitat quality of the watercourse. The department may approve the repositioning of large woody material within the watercourse to protect life and property or as needed to conduct a hydraulic project. Repositioned large woody material shall be placed or anchored to provide stable, functional fish habitat.

(2) Large woody material removal shall be conducted by equipment stationed on the bank, bridge, or other approved structure.

(3) Unless otherwise authorized, large woody material shall be suspended during its removal so no portion of the large woody material or limbs can damage the bed or banks. Yarding corridors or full suspension shall be required to avoid damage to riparian vegetation. It may be necessary to cut the large woody material in place, to a size that allows suspension during removal.

(4) Where large woody material cannot be suspended above the bed and banks, skid logs or similar methods shall be used to avoid bank damage. Upon completion of the yarding operation, skid logs shall be removed in a manner that avoids damage to streambanks and vegetation, and the bank shall be restored to preproject condition.

(5) Smaller limb and bark debris associated with the large woody material shall be removed and disposed of so as not to reenter the watercourse.

(6) Large woody material embedded in a bank or bed shall be left undisturbed and intact except where authorized for removal.

(7) Large woody material removal or repositioning shall be accomplished in a manner which minimizes the release of bedload, logs, or debris downstream.

(8) Depressions created in gravel bars shall be filled, smoothed over, and sloped upwards toward the bank on a minimum two percent gradient.

[Statutory Authority: RCW 75.08.080, 94-23-058 (Order 94-160), § 220-110-150, filed 11/14/94, effective 12/15/94. Statutory Authority: RCW 75.20.100 and 75.08.080, 83-09-019 (Order 83-25), § 220-110-150, filed 4/13/83.]

WAC 220-110-160 Felling and yarding of timber.

The following technical provisions shall apply to any felling and yarding of timber for which an HPA is required (see WAC 220-110-020). Timber felling and yarding projects requiring an HPA shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat.

(1) Trees shall not be felled into or across a watercourse, with identifiable bed or banks, except where authorized in special provisions of an HPA.

(2) Trees or logs which enter a watercourse, with identifiable bed or banks, during felling or yarding shall remain where they enter unless parts or all of the trees or logs are specifically authorized to be removed.

(3) Logs transported across a watercourse, with identifiable bed or banks, shall be suspended so no portion of the logs or limbs can enter the watercourse or damage the bed

and banks. Yarding corridors or full suspension shall be required to prevent damage to riparian vegetation.

(4) Cable tailholds may be placed over watercourses, with identifiable bed or banks, provided the number of yarding roads is kept to a minimum. When changing roads, the cable shall be moved around or over the riparian vegetation to avoid damage to the vegetation.

(5) If limbs or other small debris enter the watercourse, with identifiable bed or banks, as a result of felling and yarding of timber, they shall be removed concurrently with each change in yarding road or within seventy-two hours after entry into the watercourse and placed outside the 50-year flood plain. Limbs or other small debris shall be removed from dry watercourses prior to the normal onset of high flows. Large woody material which was in place prior to felling and yarding of timber shall not be disturbed.

(6) Precautions shall be taken to minimize the release of sediment to waters downstream from the felling or yarding activity. Sediment control devices, including, but not limited to, straw bales and filter fabric check dams, shall be used as necessary to avoid the release of sediment downstream. Accumulated sediment shall be removed from above check dams prior to their removal. The requirement to provide sediment control may be waived where adequate protection is provided through seasonal restriction of operations.

(7) There shall be no skidding or ground lead yarding or equipment operation within flowing waters in channels with defined bed or banks.

[Statutory Authority: RCW 75.08.080. 94-23-058 (Order 94-160), § 220-110-160, filed 11/14/94, effective 12/15/94. Statutory Authority: RCW 75.20.100 and 75.08.080. 83-09-019 (Order 83-25), § 220-110-160, filed 4/13/83.]

WAC 220-110-170 Outfall structures. Outfall structure projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. Additional restrictions may apply to outfall structures associated with storm water management projects (see WAC 220-110-225). The following technical provisions shall apply to outfall structure projects:

(1) The outfall structure shall be constructed according to an approved design to prevent the entry of fish, except where fish passage could enhance fish life or habitat.

(2) The watercourse bank and bed at the point of discharge shall be armored to prevent scouring.

(3) Excavation for placement of the structure or armor-ing materials shall be isolated from the wetted perimeter.

(4) Alteration or disturbance of banks and bank vegetation shall be limited to that necessary to construct the project. All disturbed areas shall be protected from erosion within seven days of completion of the project using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. The requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors preclude them.

(2005 Ed.)

(5) Structures containing concrete shall be sufficiently cured prior to contact with water, to avoid leaching.

(6) All piling, lumber, or other materials treated with preservatives shall be sufficiently cured to minimize leaching into the water or bed. The use of wood treated with creosote or pentachlorophenol is not allowed in lakes.

[Statutory Authority: RCW 75.08.080. 94-23-058 (Order 94-160), § 220-110-170, filed 11/14/94, effective 12/15/94. Statutory Authority: RCW 75.20.100 and 75.08.080. 83-09-019 (Order 83-25), § 220-110-170, filed 4/13/83.]

WAC 220-110-180 Pond construction. Pond construction projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to pond construction projects connected to a watercourse:

(1) Ponds shall not be constructed within the watercourse.

(2) Ponds shall be designed, constructed, and screened to prevent the entry of fish unless the pond will provide beneficial habitat, as determined by the department, in which case free and unrestricted access shall be provided.

(3) Pond return flow shall be located to minimize the length of the bypass reach unless the bypass reach is intended to enhance fish life or habitat.

(4) Pond construction activities involving diversion of state waters shall be dependent upon first obtaining a water right. This requirement does not apply to construction of storm water pond facilities landward of the ordinary high water line.

(5) The work area shall be isolated from the watercourse during construction of the pond, the diversion system, and the return flow system.

(6) Prior to the initial filling, all disturbed areas shall be protected from erosion, within seven days of completion of the project, using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. The requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors preclude them.

(7) Ponds shall be designed and constructed so the outflow temperature is not harmful to fish life.

WAC 220-110-190 Water diversions. A written HPA is not required for emergency water diversions during emergency fire response. The department shall be notified prior to the diversion, when possible. When prior notification is not possible, the department shall be notified within twenty-four hours of the diversion. The hydraulic code cannot be used to limit the amount or timing of water diverted under a water

right. However, construction of structures or placement of devices or other work within waters of the state which will use, divert, obstruct, or change the natural flow or bed of any of the salt or fresh waters of the state, or that will utilize any of the waters of the state in order to divert water pursuant to a water right, requires an HPA. Regulation of water flow from a permanent irrigation structure by operating valves, or manipulating stop logs, check boards or head boards, does not require an HPA. Any hydraulic project activity related to a change in the manner or location of water diversion will require an HPA modification.

Persons who have gravel berm dams as the method of diversion permitted by the department prior to January 1994 shall be allowed to continue to do so consistent with the provisions of an HPA. The department can, however, condition the approval of gravel berms.

Construction or maintenance of fish screens or guards requiring use of equipment requires a written HPA. Installation of suction hoses or cleaning, adjusting, operating, and maintaining existing irrigation or stock water diversion structures including intakes or screens without the use of equipment, may be accomplished without first securing a written HPA. For these activities, compliance with the provisions of the latest edition of the Irrigation and Fish pamphlet issued by the department is required. The pamphlet shall be on-site and serve as the HPA. If a fish kill occurs or fish are observed in distress, the project activity shall cease and the department shall be notified immediately.

The following technical provisions shall apply to water diversions:

(1) Gravel berm dams shall be constructed of gravels available on site waterward of the ordinary high water line, or of clean round gravel transported to the site. Bed disturbance shall be limited to the minimum necessary to achieve the provisions of the water right. No dirt from outside the ordinary high water line shall be used to seal the dam and no logs or woody material waterward of the ordinary high water line may be utilized for construction of the dam, unless specifically authorized.

(2) Logs and large woody material may be relocated waterward of the ordinary high water line, if they block water flow into the ditch or inhibit construction.

(3) As long as the applicant or permittee can divert enough water to satisfy the water right, the diversion dam shall be constructed so that it does not hinder upstream and downstream adult and juvenile fish passage. If passage problems develop, department personnel may, after consultation, require modification of the gravel berm dam.

(4) At pump stations, screens and headgate areas, a backhoe or suction dredge may be used to remove accumulated silts and gravel from the pumping sump. Material removed shall be placed so it will not reenter state waters.

(5) Any device used for diverting water from a fish bearing watercourse shall be equipped with a fish guard to prevent passage of fish into the diversion device pursuant to RCW 75.20.040 and 77.16.220.

(6) Diversion canals shall be maintained (sediment and debris removal) to provide maximum hydraulic gradient in the diversion canal in order to minimize the need for work within the natural watercourse.

(7) The exercise of project activity associated with diversion of state waters shall be dependent upon first obtaining a water right.

WAC 220-110-200 Mineral prospecting technical provisions. WAC 220-110-201 through 220-110-205 set forth technical provisions that shall apply to mineral prospecting and placer mining projects as necessary to protect fish life. Additional special provisions may be included in written HPAs as necessary to address site-specific conditions. Written HPAs shall also have specific time limitations on project activities to protect fish life. Timing limitations for projects conducted under authority of the *Gold and Fish* pamphlet are found in WAC 220-110-206 through 220-110-209. Saltwater provisions may be applied to tidally influenced areas upstream of river mouths and the mainstem Columbia River downstream of Bonneville Dam where applicable in written HPAs.

WAC 220-110-201 Common mineral prospecting technical provisions. A copy of the current *Gold and Fish* pamphlet available from the department shall serve as an HPA, unless otherwise indicated, and be on the job site at all times. Mineral prospecting and placer mining projects authorized through a written HPA may incorporate additional mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. Project activities may be prohibited where project impacts adversely affect fish habitats for which no proven mitigation methods are available. The following technical provisions shall apply to all mineral prospecting and placer mining projects.

(1) Excavation, collection and processing of aggregate from the bed shall comply with the timing and location restrictions specified in WAC 220-110-206 through 220-110-209. Excavation, collection and processing of aggregate within the wetted perimeter shall only occur between 5:00 a.m. and 11:00 p.m.

(2) Excavation sites shall be separated by at least two hundred feet.

(3) There shall be no excavation, collection or processing of aggregate within four hundred feet of any fishway, dam or hatchery water intake.

(4) Except as specified in WAC 220-110-203, aggregate collected from outside the bed shall not be washed, sluiced, processed or deposited within two hundred feet landward of the ordinary high water line.

(5) A maximum of five individuals eight years of age and over may collect and process aggregate from any excavation site. No more than one pit, furrow or pothole at a time shall be excavated by any one individual.

(6) Excavations shall not occur between the ordinary high water line and two hundred feet landward of the ordinary high water line. Excavations between the ordinary high water line and the toe of the bank shall not result in undercutting below the ordinary high water line or in disturbance of land surfaces above the ordinary high water line.

(7) There shall be no disturbance of live rooted vegetation of any kind. Woody debris jams and large woody material shall not be disturbed in any manner.

(8) With the exception of aggregate excavated by a suction dredge, all excavations of aggregate shall only be performed by hand or with hand-held tools. A maximum of one hand-operated cable, chain or rope winch may be used to move bed material below the ordinary high water line. Additional safety cables, chains or ropes may be attached to this material provided they do not offer a mechanical advantage and are used solely to hold material in place. The use of horses, other livestock or motorized mineral prospecting equipment, except those specifically authorized under WAC 220-110-203 through 220-110-205, is prohibited. Materials too large to be moved with a single hand-operated cable, chain or rope winch shall not be disturbed.

(9) Boulders may be moved only to facilitate collection of aggregate underneath them. Boulders shall be immediately replaced in their original location prior to working another excavation site or leaving the excavation site. Not working the excavation site for more than sixteen hours constitutes leaving the site.

(10) Only equipment, methods, locations and timing for processing aggregate specified in WAC 220-110-201 through 220-110-209 are authorized. Exceptions shall require additional authorization from the department in the form of a supplemental approval to the *Gold and Fish* pamphlet or a written HPA. A written HPA shall be required for exceptions in cases where "submit application" or "closed" is listed for state waters in WAC 220-110-206 through 220-110-209. Only the following exceptions may be authorized through a supplemental approval to the *Gold and Fish* pamphlet:

(a) Timing and location only for Class I and Class II mineral prospecting equipment.

(b) Location only for Class III mineral prospecting equipment.

(11) With the exception of sieves for classifying aggregate, mineral prospecting equipment shall not be combined in series, joined or ganged with additional mineral prospecting equipment to increase the riffle area or efficiency of mineral recovery of a single piece of mineral prospecting equipment.

(12) There shall be no damming or diversion of the flowing stream except as provided in WAC 220-110-203 (4)(d).

(13) Prior to working another excavation site or leaving the excavation site, tailings of aggregate collected from below the ordinary high water line shall be returned to the location from which the aggregate was originally collected. Sand and lighter material washed away by the streamflow during aggregate processing and tailings resulting from suction dredging may be left where processed.

(14) Except as required in subsection (13) of this section, tailings shall not be deposited in existing pools.

(15) Incubating fish eggs or fry shall not be disturbed. If fish eggs or fry are encountered during excavation of the bed,

operations shall immediately cease and the department shall be notified immediately. No further excavations shall occur until all eggs and fry have emerged from the gravel. Further approval shall be required by the department prior to resuming mineral prospecting or placer mining activities in that stream.

(16) Beds containing live freshwater mussels shall not be disturbed. If live mussels are encountered during excavation of the bed, operations shall immediately cease and shall be relocated a minimum of two hundred feet from them.

(17) All pits, furrows, tailing piles, and potholes created during excavation or processing of aggregate shall be leveled or refilled with bed materials or tailings prior to working another excavation site or leaving the excavation site. Not working the excavation site for more than sixteen hours constitutes leaving the site. No more than one pit, furrow or pothole at a time shall be excavated.

(18) Fish entrapped within pits, furrows or potholes created during excavation or processing of aggregate shall immediately be safely collected and returned to flowing waters and the pits, furrows or potholes leveled or filled.

(19) At no time shall mining or prospecting activity create a blockage or hindrance to either the upstream or downstream passage of fish.

(20) If at any time as a result of project activities or water quality problems, fish life are observed in distress or a fish kill occurs, operations shall cease and both the department and the department of ecology shall be notified of the problem immediately. Work shall not resume until further approval is given by the department. Additional measures to mitigate impacts may be required.

(21) No motorized, tracked, or wheeled vehicles shall be:

(a) Operated or allowed below the ordinary high water line of the stream; or

(b) Be operated so as to affect the bed or flow of waters of the state in any way.

(22) Entry onto private property or removal of minerals from an existing mining claim or state-owned lands without the permission of the landowner or claim holder is not authorized. The permittee is responsible for determining land ownership, land status (i.e., open to entry under the mining laws) and the status and ownership of any mining claims.

(23) Mercury and other hazardous materials shall not be used on the job site for amalgamating minerals.

(24) Mercury, lead and other hazardous materials removed from aggregate or collected in concentrators during processing of aggregate shall not be returned to waters of the state and shall be disposed of as specified by the department of ecology. Contact the department of ecology for direction on disposal.

(25) Once mining or prospecting at a job site is completed, or mining or prospecting is not conducted at the job site for more than one week, the job site shall be restored to preproject conditions, all disturbed areas shall be protected from erosion and revegetated with native plants, and all pits, furrows, tailing piles, and potholes shall be leveled or refilled as required in subsection (17) of this section.

[Title 220 WAC—p. 189]

(1) The general work time for a county applies to all streams within that county, unless otherwise indicated under specific stream and tributary work times.

(2) The work time for a listed stream applies to all its tributaries, unless otherwise indicated. Some streams flow through multiple counties. Check the listing for the county in which mineral prospecting or placer mining is to be conducted to determine the work time for that stream.

(3) Where a tributary is listed as a boundary, that boundary shall be the line perpendicular to the receiving stream that is projected from the most upstream point of the tributary mouth to the opposite bank of the receiving stream. (See Figure 1)

Figure 1. Stream boundary line

(4) Mineral prospecting and placer mining within two hundred feet landward of the ordinary high water line in state waters listed as "submit application" or "closed" is not authorized under the *Gold and Fish* pamphlet. Site review and a written HPA is required for these state waters.

The following technical provisions shall apply to boat ramps and launches in freshwater areas.

(1) Structures containing concrete shall be sufficiently cured to prevent leaching prior to contact with water.

(2) All piling, lumber, or other materials treated with preservatives shall be sufficiently cured to minimize leaching into the water or bed. The use of wood treated with creosote or pentachlorophenol is not allowed in lakes.

(3) Overburden material resulting from this project shall be deposited so as not to reenter the water.

WAC 220-110-270 Common saltwater technical provisions. The following technical provisions apply to projects in saltwater areas. Project activities may be prohibited where project impacts adversely affect fish habitats for which no proven mitigation methods are available.

(1) Use of equipment on the beach area shall be held to a minimum and confined to specific access and work corridors.

(2) Bed material, other than material excavated for bulkhead footings or placement of bulkhead base rock, shall not be utilized for project construction or fills. The department may allow placement of dredged material in areas for beneficial uses such as beach nourishment or cleanup of contaminated sediments.

(3) Wet concrete shall be prevented from entering waters of the state. Forms for any concrete structure shall be con-

structed to prevent leaching of wet concrete. Impervious material shall be placed over any exposed concrete not lined with forms that will come in contact with waters of the state. Forms and impervious material shall remain in place until the concrete is cured.

(4) Beach area depressions created during project activities shall be reshaped to preproject beach level upon project completion. Hydraulic clam harvesters shall comply with those conditions specified in WAC 220-52-018.

(5) No debris or deleterious material shall be disposed of or abandoned waterward of the ordinary high water line except at an approved in-water site.

(6) All debris or deleterious material resulting from construction shall be removed from the beach area or bed and prevented from entering waters of the state.

(7) No petroleum products or other deleterious materials shall enter surface waters.

(8) Project activities shall be conducted to minimize siltation of the beach area and bed.

(9) All piling, lumber, and other materials treated with preservatives shall be sufficiently cured to minimize leaching into the water or bed.

(10) Wood treated with preservatives, trash, waste, or other deleterious materials shall not be burned below the ordinary high water line. Limited burning of untreated wood or similar material, subject to timing restrictions or other provisions may be allowed.

(11) Project activities shall not degrade water quality to the detriment of fish life.

(12) If a fish kill occurs or fish are observed in distress, the project activity shall immediately cease and the department granting the HPA shall be notified immediately.

WAC 220-110-280 Bulkheads and bank protection in saltwater areas (nonsingle family residence). Bulkhead construction and other bank protection projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat.

The following technical provisions apply to bulkhead and bank protection projects in saltwater areas on nonsingle family residence property. In addition, these projects shall comply with technical provisions and timing restrictions in WAC 220-110-240 through 220-110-271.

(1) The waterward face of a new bulkhead or other bank protection shall be constructed according to an approved design, utilizing the least impacting type of structure and shall minimize encroachment waterward of the ordinary high water line to protect juvenile salmonid migration corridors and other habitats of special concern.

(2) Replacement or repair of an existing, functioning bulkhead or other bank protection shall utilize the least impacting type of structure and method of construction and shall minimize further waterward encroachment.

(3) The construction of bulkheads and other bank protection is prohibited in eelgrass (*Zostera* spp), Pacific herring

(2005 Ed.)

spawning beds, and lingcod and rockfish settlement and nursery areas.

(4) The construction of bulkheads and other bank protection shall not result in a permanent loss of surf smelt, Pacific sand lance, or rock sole spawning beds.

(5) Kelp (Order laminariales) or intertidal wetland vascular plants (except noxious weeds) adversely impacted due to construction of bulkheads or other bank protection shall be replaced using proven methodology.

(6) Project activities within the beach area shall not occur when the project area, including the work corridor, is inundated by tidal waters.

(7) Removal or destruction of overhanging bankline vegetation shall be limited to that necessary for construction of the bulkhead or other bank protection.

(8) All natural habitat features on the beach larger than twelve inches in diameter including trees, stumps and logs, and large rocks shall be retained on the beach following construction.

(9) Excavated materials containing silt, clay, or fine grained soil shall not be stockpiled below the ordinary high water line.

(10) When stockpiling of sand, gravel, and other coarse material is allowed below the ordinary high water line, it shall be placed within a designated work corridor waterward of the bulkhead footing or base rock. All excavated or stockpiled material shall be removed from the beach within seventy-two hours of bulkhead construction.

(11) If sand, gravel, and other coarse material is to be temporarily placed where it will come into contact with tidal waters, this material shall be covered with filter fabric and adequately secured to prevent erosion and/or potential entrainment of fish.

(12) All trenches, depressions, or holes created in the beach area shall be backfilled prior to inundation by tidal waters. Trenches excavated for footings or placement of base rock may remain open during construction, however, fish shall be prevented from entering such trenches.

(13) Placement of appropriately sized gravel on the beach area shall be required following construction of bulkheads or other bank protection in identified surf smelt spawning areas.

WAC 220-110-285 Single-family residence bulkheads in saltwater areas. Single-family residence bulkheads shall not result in the permanent loss of critical food fish or shellfish habitat.

The following provisions apply to bulkhead projects in saltwater areas on single-family residence property. Except as expressly provided for in this section, construction of single-family residence bulkheads shall comply with technical provisions and timing restrictions in WAC 220-110-240 through 220-110-271.

(1) Critical food fish and shellfish habitats pertaining to single-family residence bulkheads as identified in RCW 75.20.160 are those habitats that serve an essential function

in the developmental life history of fish or shellfish. These habitats include but are not limited to the following:

(a) Pacific herring, surf smelt, Pacific sand lance, and rock sole spawning beds;

(b) Intertidal wetland vascular plants (except noxious weeds);

(c) Eelgrass (*Zostera* spp);

(d) Kelp (Order laminariales);

(e) Lingcod settlement and nursery areas;

(f) Rockfish settlement and nursery areas;

(g) Juvenile salmonid migration corridors and rearing and feeding areas.

(2) The waterward face of a new bulkhead shall be located at or above the ordinary high water line. Where this is not practicable due to geological, engineering, or safety concerns, the waterward face of the new bulkhead shall be located only as far waterward of the ordinary high water line as necessary to excavate for footings or place base rock for the structure and under no conditions shall the waterward face of the bulkhead be located more than six feet waterward of the ordinary high water line. In addition, the waterward face of any bulkhead shall be located as close to the toe of the bank as possible.

(3) The waterward face of a replacement bulkhead shall be located no further waterward than the face of the existing, functioning bulkhead except where removal of the existing bulkhead would result in environmental degradation (e.g., release of deleterious material) or removal problems due to geological, engineering, or safety concerns. Where removal of an existing bulkhead is not practicable for the above reasons, the replacement or repair bulkhead shall be placed waterward of and directly abutting the existing structure. The least impacting type of structure and method of construction shall be utilized in these instances.

(4) Construction work on a bulkhead project under this section shall be subject to the timing restrictions in WAC 220-110-271 if the department determines that the project may affect a critical food fish or shellfish habitat described above. To determine if a timing constraint is appropriate for a bulkhead project under this section the department shall consider the particular location of the project and characteristics of habitats that may be affected by the project, and may include an inspection of the project site to evaluate the particular habitats near the project. The timing constraints listed in WAC 220-110-271 shall be imposed only if the department determines in the particular case that the constraint is necessary to protect a critical food fish or shellfish habitat. In addition, the timing constraints under this section shall meet the following requirements:

(a) When a project under this section may affect more than one critical habitat, the department shall apply the more protective timing constraint.

(b) Timing conditions to protect nearshore juvenile salmonid migration, rearing, and feeding areas shall not be required if:

(i) The excavation for footings or placement of base rock is located at or above MHHW and all construction work is conducted from the landward side of the project; or

(ii) The waterward face of the bulkhead and all work areas and corridors, including stockpile areas, but excluding

the area occupied by a grounded barge, are at or above MHHW; or

(iii) The waterward face of the bulkhead is at or above MHHW and the bed of the project site does not contain substantial amounts of silt, clay, or fine grained sediments, so long as the project also meets the following conditions:

(A) If the bulkhead is to be constructed of rock, then work shall be limited to daylight hours in a twenty-five-foot wide corridor immediately waterward of the new bulkhead face (excluding the area occupied by a grounded barge) and construction work shall not occur if tidal waters are within thirty feet of the new bulkhead face or within the stockpile area, whichever is greater. The department may permit rock to be stockpiled within fifty feet of the new bulkhead face.

(B) If the bulkhead is to be constructed of concrete, timber, steel, or material other than rock, work shall be limited to daylight hours in a fifteen foot wide corridor immediately waterward of the new bulkhead face (excluding the area occupied by a grounded barge) and construction work shall not occur if tidal waters are within twenty feet of the new bulkhead face.

(c) Timing conditions to protect surf smelt spawning beds shall be imposed if a bulkhead project is located on or where it may affect a surf smelt spawning area and the surf smelt spawning season for that location is less than six months. If the surf smelt spawning season for the project location is six months or longer, then work may be permitted if it commences within forty-eight hours after the location is inspected by a department representative or biologist acceptable to the department and it is determined that no spawn is occurring or has recently occurred. The project may be further conditioned to require completion within a particular time.

(d) When required by the habitat characteristics of a particular case, location, or project, the department may impose appropriate timing constraints to protect a critical habitat pursuant to WAC 220-110-271(5).

(5) Project activities shall not occur when the project area including the work corridor (excluding the area occupied by a grounded barge), is inundated by tidal waters.

(6) Removal or destruction of overhanging bankline vegetation shall be limited to that necessary for construction of the bulkhead.

(7) All natural habitat features on the beach larger than twelve inches in diameter including trees, stumps, logs, and large rocks shall be retained on the beach following construction.

(8) Excavated materials containing silt, clay, or fine grained soil shall not be stockpiled below the ordinary high water line.

(9) When stockpiling of sand, gravel, and other coarse material is allowed below the ordinary high water line, it shall be placed within a designated work corridor waterward of the bulkhead footing or base rock. All excavated or stockpiled material shall be removed from the beach within seventy-two hours of bulkhead construction.

(10) If sand, gravel and other coarse material is to be temporarily placed where it will come into contact with tidal waters, this material shall be covered with filter fabric and adequately secured to prevent erosion and/or potential entrainment of fish.

(11) All trenches, depressions, or holes created in the beach area shall be backfilled prior to inundation by tidal waters. Trenches excavated for footings or placement of base rock may remain open during construction, however, fish shall be prevented from entering such trenches.

(12) Placement of appropriately sized gravel on the beach area shall be required following construction of bulkheads in identified surf smelt spawning areas.

WAC 220-110-290 Saltwater boat ramps and launches. Boat ramp projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions apply to saltwater area boat ramp and launch projects. In addition, these projects shall comply with technical provisions and timing restrictions in WAC 220-110-240 through 220-110-271.

(1) Railway-type boat launches shall be designed to cause minimal interference with tidal currents and littoral drift.

(2) Boat ramps shall be designed and located to avoid adverse impacts to surf smelt, Pacific sand lance, rock sole, and Pacific herring spawning beds, rockfish and lingcod settlement and nursery areas, and eelgrass (*Zostera* spp).

In addition, these projects shall comply with technical provisions and timing restrictions in WAC 220-110-240 through 220-110-271.

(1) Floats and rafts shall not ground on surf smelt, Pacific herring, Pacific sand lance, and rock sole spawning beds. In all other areas, no more than twenty percent of the float or raft within the beach area shall ground at any time. Those portions of the float or raft that will ground shall be constructed to align parallel to the shore and provide a minimum of eight inches clearance between the beach area and nongrounding portions of the float.

(2) Floats, rafts, and associated anchoring systems shall be designed and deployed so that the bed is not damaged.

WAC 220-110-330 Marinas in saltwater areas.

Marina construction projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions apply to marina projects. In addition, these projects shall comply with technical provisions and timing restrictions in WAC 220-110-240 through 220-110-320 except WAC 220-110-285.

(1) The construction of marinas is prohibited on or over Pacific herring spawning beds and lingcod and rockfish settlement and nursery areas.

(2) Marinas shall be designed, located, and constructed to avoid adverse impacts to surf smelt, Pacific sand lance, and rock sole spawning beds, and eelgrass (*Zostera* spp).

(3) Open-type construction, utilizing floating breakwaters and open pile work, shall be used whenever practicable.

(5) All navigation channels and breaches shall be maintained at or below marina depth to provide adequate fish passage.

(6) Isolated breakwaters beyond the line of extreme low tide shall be constructed of permanent material. No slope restrictions apply.

(7) The following provisions apply to marina construction shoreward of the existing ordinary high water line:

(a) A single entrance may be required.

(b) The entire inner shoreline shall be in conformance with bulkheading provisions in WAC 220-110-280.

(8) The following provisions apply to marina construction waterward of the ordinary high water line:

(a) The beach area inside the marina may be protected in accordance with bulkheading provisions in WAC 220-110-280. Between the elevation of the toe of the bulkhead and MLLW the beach face shall not exceed a slope of 1.5 feet horizontal to one foot vertical.

WAC 220-110-331 Aquatic plant removal and control technical provisions. WAC 220-110-332 through 220-110-338 set forth technical provisions that shall apply to hydraulic projects that control or remove aquatic plants. Aquatic plant removal and control methods include physical, mechanical, biological and chemical control methods. Often the best approach to aquatic plant control and removal is through the development of a vegetation management plan. A vegetation management plan is a comprehensive approach to control of aquatic plants where all forms of control strategies are considered and usually some combination of techniques is selected and implemented in a planned manner. These plans are based on the idea that decisions should be centered upon an understanding of the biology and ecology of the aquatic plant to be controlled and the environmental characteristics of the site. Integrated vegetation management planning is encouraged at all times to comprehensively address aquatic plant problems for a watercourse. Certain technical provisions shall be required depending upon the individual

proposal and site specific characteristics. Additional special provisions may be included, as necessary to address site-specific conditions. Those provisions, where applicable, shall be contained in the HPA (pamphlet or individual), as necessary to protect fish life. HPAs shall have specific time limitations on project activities to protect fish life. Information concerning timing shall be included with the pamphlet HPA. Saltwater provisions may be applied to tidally influenced areas upstream of river mouths and the mainstem Columbia River downstream of Bonneville Dam where applicable.

[Statutory Authority: RCW 75.08.080, 97-13-001 (Order 97-84), § 220-110-331, filed 6/4/97, effective 7/5/97.]

WAC 220-110-332 Hand removal or control. A copy of the current *Aquatic Plants and Fish* pamphlet available from the department shall serve as an HPA, unless otherwise indicated, and be on the job site at all times. Hand removal or control of aquatic plants is useful for eradication of an aquatic noxious weed early infestation. Hand removal or control can be effective for small, confined areas. Hand removal or control of aquatic plants projects may incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to hand removal or control of both aquatic noxious weed and aquatic beneficial plant projects except where otherwise indicated:

(1) Due to potential impacts to sockeye spawning areas, prior authorization by the department shall be required for raking in Baker Lake and Lakes Osoyoos, Ozette, Pleasant, Quinault, Sammamish, Washington and Wenatchee. Authorization may or may not be given for raking, and if given, may require mitigation through a written agreement between the applicant and the department for impacts by raking to the spawning area.

(2) Work shall be restricted to the use of hand-pulling, hand-held tools or equipment, or equipment that is carried when used.

(3) Removal or control of aquatic beneficial plants to maintain an access for boating or swimming shall be allowed along a maximum length of 10 linear feet of the applicant's shoreline. Projects for boating and swimming access which cover a larger area shall require prior authorization by the department.

(4) Where possible, the entire plant shall be removed when using hand-pulling for aquatic noxious weeds.

(5) Removal of detached plants and plant fragments from the watercourse shall be as complete as possible when using hand removal to remove or control aquatic noxious weeds. Detached plants and plant fragments shall be disposed of at an upland site so as not to reenter state waters.

(6) Existing fish habitat components such as logs, stumps, and large boulders shall not be removed or disturbed.

(7) Work shall be conducted to minimize the release of sediment and sediment-laden water from the project site.

(8) Extreme care shall be taken to ensure that no petroleum products, hydraulic fluid or other deleterious material from equipment used are allowed to enter or leach into the watercourse.

(9) If at any time as a result of project activities or water quality problems, fish life are observed in distress or a fish kill occurs, operations shall cease and both the department

and the department of ecology shall be notified of the problem immediately. The project shall not resume until further approval is given by the department. Additional measures to mitigate impacts may be required.

(10) Every effort shall be made to avoid the spread of plant fragments through equipment contamination. Persons or firms using any equipment to remove or control aquatic plants shall thoroughly remove and properly dispose of all viable residual plants and viable plant parts from the equipment prior to the equipment's use in a body of water.

[Statutory Authority: RCW 75.08.080. 97-13-001 (Order 97-84), § 220-110-332, filed 6/4/97, effective 7/5/97.]

WAC 220-110-333 Bottom barriers or screens.

A copy of the current *Aquatic Plants and Fish* pamphlet available from the department shall serve as an HPA, unless otherwise indicated, and be on the job site at all times. Bottom barriers or screens are useful for eradication of an aquatic noxious weed early infestation. Bottom barriers or screens are best used in small, confined areas where control of all plants is desirable. Bottom barrier or screen projects may incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to bottom barrier or screen projects for both aquatic noxious weed or aquatic beneficial plant control or removal except where otherwise indicated:

(1) Due to potential impacts to sockeye spawning areas, prior authorization by the department shall be required for activities in Baker Lake and Lakes Osoyoos, Ozette, Pleasant, Quinault, Sammamish, Washington, and Wenatchee. Authorization may or may not be given for the activity, and if given, may require mitigation through a written agreement between the applicant and the department for impacts by the activity to the spawning area.

(2) For removal and control of aquatic noxious weeds, bottom barrier or screen material shall not cover more than fifty percent of the length of the applicant's shoreline. Bottom barrier or screen projects covering a larger area shall require prior authorization by the department. Bottom barrier or screen and anchor material consisting of biodegradable material may be left in place. Bottom barrier or screen and anchor material that is not biodegradable shall be completely removed within two years of placement to encourage recolonization of aquatic beneficial plants unless otherwise approved by the department.

(3) To remove or control aquatic beneficial plants such that an access is maintained for boating or swimming, bottom barrier or screen and anchor material that is either biodegradable or nonbiodegradable may be installed along a maximum length of ten linear feet of the applicant's shoreline. Bottom barrier or screen projects for boating and swimming access which cover a larger area shall require prior authorization by the department.

(4) Bottom barrier or screen material shall be securely anchored with pea-gravel filled bags, rock or similar mechanism to prevent billowing and movement offsite.

(5) Bottom barrier or screen and anchors shall be regularly maintained while in place to ensure the barrier or screen and anchors are functioning properly. Barriers or screens that

(2005 Ed.)

have moved or are billowing shall immediately be securely reinstalled or removed from the watercourse.

(6) Existing fish habitat components such as logs, stumps, and large boulders may be relocated within the watercourse if necessary to properly install the bottom barrier or screen. These habitat components shall not be removed from the watercourse.

(7) If at any time as a result of project activities or water quality problems, fish life are observed in distress or a fish kill occurs, operations shall cease and both the department and the department of ecology shall be notified of the problem immediately. The project shall not resume until further approval is given by the department. Additional measures to mitigate impacts may be required.

(8) Every effort shall be made to avoid the spread of plant fragments through equipment contamination. WAC 220-110-334 Weed rolling. A copy of the current *Aquatic Plants and Fish* pamphlet available from the department shall serve as an HPA, unless otherwise indicated, and be on the job site at all times. Weed rollers are best used when control of all aquatic plants is desired. Weed rolling projects may incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to weed rolling projects for both aquatic noxious weed or aquatic beneficial plant control or removal except where otherwise indicated:

(1) Due to potential impacts to sockeye spawning areas, prior authorization by the department shall be required for activities in Baker Lake and Lakes Osoyoos, Ozette, Pleasant, Quinault, Sammamish, Washington, and Wenatchee. Authorization may or may not be given for the activity, and if given, may require mitigation through a written agreement between the applicant and the department for impacts by the activity to the spawning area.

(2) Weed rollers shall not be used to remove an aquatic noxious weed early infestation. To remove or control all other infestation levels of aquatic noxious weeds, weed rollers shall not cover an area of more than two thousand five hundred square feet. Weed roller projects covering a greater area shall require prior authorization by the department.

(3) Where the intent is to remove or control aquatic beneficial plants, prior authorization by the department shall be required.

(4) Removal of detached plants and plant fragments from the watercourse shall be as complete as possible when using weed rollers to remove or control aquatic noxious weeds. Detached plants and plant fragments shall be disposed of at an upland site so as not to reenter state waters.

(5) Work shall be conducted to minimize the release of sediment and sediment-laden water from the project site.

(6) Extreme care shall be taken to ensure that no petroleum products, hydraulic fluid or other deleterious material

from equipment used are allowed to enter or leach into the watercourse.

WAC 220-110-335 Mechanical harvesting and cutting. A copy of the current *Aquatic Plants and Fish* pamphlet available from the department shall serve as an HPA, unless otherwise indicated, and be on the job site at all times. Mechanical harvesting and cutting projects may incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to mechanical harvesting and cutting projects for both aquatic noxious weed or aquatic beneficial plant control or removal except where otherwise indicated:

(1) Mechanical harvesters and cutters shall not be used to remove an aquatic noxious weed early infestation.

(2) If the intent of the project is to remove aquatic beneficial plants, prior authorization by the department shall be required.

(3) Removal of detached plants and plant fragments from the watercourse shall be as complete as possible when using mechanical harvesters or cutters to remove or control aquatic noxious weeds. Detached plants and plant fragments shall be disposed of at an upland site so as not to reenter state waters.

(4) Extreme care shall be taken to ensure that no petroleum products, hydraulic fluid or other deleterious material from equipment used are allowed to enter or leach into the watercourse. Equipment shall be well-maintained and where practicable, food-grade oil in the hydraulic systems should be used.

(5) If at any time as a result of project activities or water quality problems, fish life are observed in distress or a fish kill occurs, operations shall cease and both the department and the department of ecology shall be notified of the problem immediately. The project shall not resume until further approval is given by the department. Additional measures to mitigate impacts may be required.

(6) Existing fish habitat components such as logs, stumps, and large boulders may be relocated within the watercourse if necessary to operate the equipment. These

habitat components shall not be removed from the watercourse.

(7) Mechanical harvester and cutter operations shall only be conducted in waters of sufficient depth to avoid bottom contact with the cutter blades.

(8) Mechanical harvesters and cutters shall be operated at all times to cause the least adverse impact to fish life.

(9) Fish life that may be entrained in the cut vegetation during mechanical harvester operations shall be immediately and safely returned to the watercourse.

(10) Every effort shall be made to avoid the spread of plant fragments through equipment contamination. Persons or firms using any equipment to remove or control aquatic plants shall thoroughly remove and properly dispose of all viable residual plants and viable plant parts from the equipment prior to the equipment's use in a body of water.

(11) Alteration or disturbance of the bank and bank vegetation shall be limited to that necessary to conduct the project. All disturbed areas shall be protected from erosion, within seven calendar days of completion of the project, using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. After authorization by the department, the requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors preclude them.

[Statutory Authority: RCW 75.08.080, 97-13-001 (Order 97-84), § 220-110-335, filed 6/4/97, effective 7/5/97.]

WAC 220-110-336 Rotovation. An individual HPA shall be required for rotovation projects. Rotovation projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to rotovation projects for both aquatic noxious weed or aquatic beneficial plant control or removal except where otherwise indicated:

(1) Rotovators shall not be used to remove an aquatic noxious weed early infestation.

(2) Removal of detached plants and plant fragments from the watercourse shall be as complete as possible when using rotovation to remove or control aquatic noxious weeds. Detached plants and plant fragments shall be disposed of at an upland site so as not to reenter state waters.

(3) Extreme care shall be taken to ensure that no petroleum products, hydraulic fluid or other deleterious material from equipment used are allowed to enter or leach into the watercourse. Rotovators shall be well-maintained and where practicable, food-grade oil in the hydraulic systems should be used.

(4) If at any time, as a result of project activities or water quality problems, fish life are observed in distress or a fish kill occurs, operations shall cease and both the department and the department of ecology shall be notified of the problem immediately. The project shall not resume until further

approval is given by the department. Additional measures to mitigate impacts may be required.

(9) Rotovation shall not occur in fish spawning areas unless approved by the department.

[Statutory Authority: RCW 75.08.080, 97-13-001 (Order 97-84), § 220-110-336, filed 6/4/97, effective 7/5/97.]

WAC 220-110-337 Aquatic plant dredging. A copy of the current *Aquatic Plants and Fish* pamphlet available from the department shall serve as an HPA for diver-operated dredging only, unless otherwise indicated, and shall be on the job site at all times. All other dredging for aquatic plant control or removal shall require an individual HPA. Dredging projects may incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to dredging projects for both aquatic noxious weed or aquatic beneficial plant control or removal except where otherwise indicated:

(1) All aquatic plant dredging projects.

(a) Due to potential impacts to sockeye spawning areas, prior authorization by the department shall be required for activities in Baker Lake and Lakes Osoyoos, Ozette, Pleasant, Quinault, Sammamish, Washington, and Wenatchee. Authorization may or may not be given for the activity, and if given, may require mitigation through a written agreement between the applicant and the department for impacts by the activity to the spawning area.

(b) Extreme care shall be taken to ensure that no petroleum products, hydraulic fluid or other deleterious material from equipment used are allowed to enter or leach into the watercourse. Equipment shall be well-maintained and where

practicable, food-grade oil in the hydraulic systems should be used.

(c) If at any time as a result of project activities or water quality problems, fish life are observed in distress or a fish kill occurs, operations shall cease and both the department and the department of ecology shall be notified of the problem immediately. The project shall not resume until further approval is given by the department. Additional measures to mitigate impacts may be required.

(d) Existing fish habitat components such as logs, stumps, and large boulders may be relocated within the watercourse if necessary to operate the equipment. These habitat components shall not be removed from the watercourse.

(e) Dredging shall be conducted at all times with dredge types and methods that cause the least adverse impact to fish life.

(f) Every effort shall be made to avoid the spread of plant fragments through equipment contamination. Persons or firms using any equipment to remove or control aquatic plants shall thoroughly remove and properly dispose of all viable residual plants and viable plant parts from the equipment prior to the equipment's use in a body of water.

(g) Work shall be conducted to minimize the release of sediment and sediment-laden water from the project site.

(h) Upon completion of the dredging, the bed shall not contain pits, potholes, or large depressions to avoid stranding of fish.

(i) Alteration or disturbance of the bank and bank vegetation shall be limited to that necessary to conduct the project. All disturbed areas shall be protected from erosion, within seven calendar days of completion of the project, using vegetation or other means. The banks shall be revegetated within one year with native or other approved woody species. Vegetative cuttings shall be planted at a maximum interval of three feet (on center), and maintained as necessary for three years to ensure eighty percent survival. Where proposed, planting densities and maintenance requirements for rooted stock will be determined on a site-specific basis. After prior authorization by the department, the requirement to plant woody vegetation may be waived for areas where the potential for natural revegetation is adequate, or where other engineering or safety factors preclude them.

(2) Diver-operated dredging only. The use of diver-operated dredging is useful to remove an aquatic noxious weed early infestation, and to assist in long-term maintenance following control or removal via other methods.

(a) Removal of plants and plant fragments from the watercourse shall be as complete as possible when using diver-operated dredging to remove or control aquatic noxious weeds. Plants and plant fragments shall be removed from the dredge slurry prior to its return to the watercourse. Dredged bed materials, including detached plants and plant fragments, shall be disposed of at an upland disposal site so as not to reenter state waters.

(b) An hydraulic dredge shall only be operated with the intake at or below the surface of the material being removed. The intake shall only be raised a maximum of three feet above the bed for brief periods of purging or flushing the intake system.

(c) If the intent of the project is to remove or control aquatic beneficial plants, prior authorization from the department shall be required.

(3) Dredging other than diver-operated dredging. *Except* for diver-operated dredging, an individual HPA shall be required for all dredging for aquatic plant control or removal projects.

(a) Dragline and clamshell dredges shall not be used to remove an aquatic noxious weed early infestation.

(b) Removal of plants and plant fragments from the watercourse shall be as complete as possible when using dredging to remove or control aquatic noxious weeds. Dredged bed materials, including detached plants and plant fragments, shall be disposed of at an upland disposal site so as not to reenter state waters.

(c) Dredging shall not be conducted in fish spawning areas unless approved by the department.

(d) An hydraulic dredge shall only be operated with the intake at or below the surface of the material being removed. The intake shall only be raised a maximum of three feet above the bed for brief periods of purging or flushing the intake system.

(e) If a dragline or clamshell is used, it shall be operated to minimize turbidity. During excavation, each pass with the clamshell or dragline bucket shall be complete. Dredged material shall not be stockpiled waterward of the ordinary high water line.

[Statutory Authority: RCW 75.08.080, 97-13-001 (Order 97-84), § 220-110-337, filed 6/4/97, effective 7/5/97.]

WAC 220-110-338 Water level manipulation. An individual HPA shall be required for water level manipulation. The use of water level manipulations (drawdowns) to remove or control aquatic noxious weeds or aquatic beneficial plants by exposing plants and root systems to extreme temperature and moisture conditions may be appropriate under specific circumstances. Accurate plant identification is important to ensuring any degree of success. Water level manipulation projects shall incorporate mitigation measures as necessary to achieve no-net-loss of productive capacity of fish and shellfish habitat. The following technical provisions shall apply to water level manipulation projects for both aquatic noxious weed or aquatic beneficial plant control or removal except where otherwise indicated:

(1) If at any time as a result of project activities or water quality problems, fish life are observed in distress or a fish kill occurs, operations shall cease and both the department and the department of ecology shall be notified of the problem immediately. The project shall not resume until further approval is given by the department. Additional measures to mitigate impacts may be required.

(2) Water level manipulation shall be conducted to cause the least adverse impact to fish life.

(3) Water level manipulation shall occur gradually and in a controlled manner to prevent a sudden release of impounded water or sediments which may result in downstream bed and bank degradation, sedimentation, or flooding. Water levels shall be drawdown and brought back up at rates predetermined in consultation with and approved by the department. Instream flow requirements shall be maintained as water levels are brought back up.

(4) Disturbed bank areas shall be protected from erosion. Erosion control methods may include, but are not limited to, filter fabric and immediate mulching of exposed areas. Riprap, or other bank hardening/armoring method, shall not be allowed.

[Statutory Authority: RCW 75.08.080, 97-13-001 (Order 97-84), § 220-110-338, filed 6/4/97, effective 7/5/97.]

WAC 220-110-340 Informal appeal of adverse administrative decisions. It is recommended that an aggrieved party contact the local habitat biologist responsible for the hydraulic permit decision of concern prior to initiating an informal or formal appeal. Discussion of concerns with the habitat biologist often results in resolution of the problem without the need for an informal or formal appeal. The habitat biologist may request review of your concerns by his or her supervisor.

All parties are encouraged to take advantage of this informal appeal process prior to initiating a formal appeal. However, this informal appeal process is not mandatory, and a person may proceed directly to a formal appeal.

(1) The following procedures shall govern informal appeals of department actions taken pursuant to RCW 75.20.100, 75.20.103, 75.20.106, and 75.20.160. This rule does not apply to any provisions or conditions in pamphlets or supplemental approvals as defined in WAC 220-110-020 (44)(c). A person who disagrees with a provision or condition in a pamphlet HPA or its supplemental approval may apply for an individual written HPA. A person who is aggrieved or adversely affected by the following department actions may request an informal review:

(a) The denial or issuance of an HPA, or the conditions or provisions made part of an HPA; or

(b) An order imposing civil penalties.

(2) A request for an informal review shall be in writing and shall be received by the department within thirty days of the denial or issuance of an HPA or receipt of an order imposing civil penalties. The thirty-day time requirement may be stayed by the department if negotiations are occurring between the aggrieved party and the habitat biologist and/or their supervisor. Requests for informal review shall be mailed to Department of Fish and Wildlife, Habitat and Lands Services Program, 600 Capitol Way N., Olympia, Washington 98501-1091, or hand delivered to 1111 Washington Street S.E., Habitat and Lands Services Program, Fifth floor.

(3) Upon receipt of a written request for informal agency review, the department shall initiate a review of the agency decision. This review shall be conducted by the regulatory services division manager or the division manager's designee. Upon completion of the comprehensive review, the division manager, or designee shall recommend a decision to the director or the director's designee. This recommended decision shall be approved or disapproved by the director or the director's designee within sixty days of the date the informal appeal was received by the department. The department shall notify the appellant in writing of the decision of the director or the director's designee.

(4) If, following this informal agency review process, the appellant still wishes to contest the agency action, a formal appeal may be initiated pursuant to WAC 220-110-350. For-

mal review must be requested within the time periods specified in WAC 220-110-350.

A person who disagrees with a provision or condition in a pamphlet HPA or its supplemental approval may apply for an individual written HPA. This rule does not apply to an appeal in which a person contests the denial, conditioning or issuance of an HPA issued pursuant to RCW 75.20.103 or 75.20.160, which shall be heard by the hydraulic appeals board. A person who is aggrieved or adversely affected by the following department actions may request a formal appeal:

(a) The denial or issuance of an HPA, or the conditions or provisions made part of an HPA;

(b) An order imposing civil penalties; or

(c) Any other "agency action" for which an adjudicative proceeding is required under the Administrative Procedure Act, chapter 34.05 RCW.

(2) As required by the Administrative Procedure Act, the department shall inform the permittee, or person subject to civil penalty or order of the department, of the opportunity for appeal, the time within which to file a written request for an appeal, and the place to file it.

(3) A request for an appeal shall be in writing and shall be received during office hours by the department within thirty days of the agency action that is being challenged. Requests for appeal shall be mailed to Department of Fish and Wildlife, Habitat and Lands Services Program, 600 Capitol Way N., Olympia, Washington 98501-1091, or hand delivered to 1111 Washington Street SE, Habitat and Lands Services Program, Fifth floor. If there is no timely request for an appeal, the agency action shall be final and unappealable.

(4) The time period for requesting a formal appeal is suspended during consideration of a timely informal appeal. If there has been an informal appeal, the deadline for requesting a formal appeal shall be within thirty days of the date of the department's written decision in response to the informal appeal.

(5) The written request for an appeal shall be plainly labeled as "Request for Formal Appeal" and shall contain the following:

(a) The name, address, and phone number of the person requesting the appeal;

(b) The specific agency action that the person contests; for example, denial of an HPA, a particular condition in an HPA, order imposing civil penalties, etc.;

(c) Whether the person is the permittee, landowner, resident, or other basis for the person's interest in the agency action in question;

(2005 Ed.)

(d) The date of denial, issuance, or condition of an HPA, if the person is contesting denial, issuance, or conditioning of an HPA;

(e) Specific relief requested; and

(f) The attorney's name, address, and phone number, if the person is represented by legal counsel.

(6) The appeal may be conducted by the director, the director's designee, or by an administrative law judge (ALJ) appointed by the office of administrative hearings. If conducted by an ALJ, the ALJ shall issue an initial order pursuant to RCW 34.05.461. The director or the director's designee shall review the initial order and enter a final order as provided by RCW 34.05.464.

(7) All hearings conducted by the director, the director's designee, or an ALJ pursuant to subsection (6) of this section, shall comply with the Administrative Procedure Act and the model rules of procedure, chapter 10-08 WAC.

WAC 220-110-360 Penalties. (1) Any person that commences any activity subject to RCW 75.20.100, 75.20.103, or 75.20.160 without having first obtained an HPA from the department, or any person that fails to comply with any of the requirements or provisions of an HPA, is guilty of a gross misdemeanor.

(2) The department may impose a civil penalty of up to one hundred dollars per day for a violation or continuing violation of RCW 75.20.100 or 75.20.103, or any provision or condition of an HPA. The department shall impose the civil penalty with an order in writing delivered by certified mail or personal service to the person who is penalized. The notice shall describe the violation, identify the amount of the penalty, identify how to pay the penalty, and identify informal or formal appeal rights for the person penalized. If the violation is an ongoing violation, the penalty shall accrue for each additional day of violation. For ongoing violations, the civil penalty may continue to accrue during any appeal process unless the accrual is stayed in writing by the department.

(3) If not timely appealed under WAC 220-110-340 or 220-110-350, the civil penalty order is final and unappealable. If appealed, the civil penalty becomes final upon issuance of a final order not subject to any further administrative appeal. When a civil penalty order becomes final, it is due and payable. If the civil penalty is not paid within thirty days after it becomes due and payable, the department may seek enforcement of the order pursuant to RCW 75.20.106 and 34.05.578.

WAC 220-125-010 Scope of rules—Definitions. The provisions of this chapter apply to the department's authority under chapter 77.15 RCW to issue orders that revoke licenses, tags, or permits issued by the department, or to suspend privileges administered by the department.

(1) "Revoke" and "revocation" mean issuance of a department order under chapter 77.15 RCW that takes away a license, tag, or permit. A revocation order nullifies all privileges represented by the license, tag, or permit, regardless of whether a revoked license is physically returned to the department, unless that order is withdrawn or reversed.

(2) "Suspend" and "suspension" mean issuance of a department order under chapter 77.15 RCW that prohibits a person from enjoying or exercising a privilege that is regulated by any licenses, tags, or permits issued by the department. When a person is subject to an order suspending privileges, then any license obtained in violation of the suspension is void.

(3) For purposes of suspending hunting privileges because of a person shooting another person or domestic livestock while hunting pursuant to RCW 77.15.720, a person is "hunting" if the person is in transit to or from engaging in hunting activities, or the person is in the field engaging in hunting activities.

[Statutory Authority: RCW 77.12.047. 04-05-026 (Order 04-22), § 220-125-010, filed 2/10/04, effective 3/12/04. Statutory Authority: RCW 75.08.080. 00-01-101 (Order 99-209), § 220-125-010, filed 12/16/99, effective 1/16/00.]

WAC 220-125-020 Issuing orders of revocation or suspension. Upon a determination that there are grounds for an order of revocation or suspension provided by statute, the director, or the director's authorized designee, is authorized to issue a revocation or suspension order.

(1) Time limit for orders. An order shall be issued no later than two years from the last conviction or other event that provides the grounds for the order.

(2) Effective date of orders. An order shall not be effective until the 21st calendar day following the mailing date of the order and shall remain in effect through the entire period of suspension, or the remaining period of the revoked license, unless the order is withdrawn, or unless recipient files a timely request for an adjudicative proceeding under WAC 220-125-050 to contest the order. When there is a timely request for an adjudicative proceeding, the effective date, if any, shall be set by the final order that results from the adjudicative proceeding.

(3) Exception for orders that take effect immediately. If the director makes a finding that public health, safety, or wel-

fare requires emergency action, the order may provide that revocation or suspension take effect immediately, or at any time prior to an adjudicative proceeding. A person subject to such an order may seek an adjudicative proceeding and that proceeding shall include an opportunity to seek expedited review of the determination that the order take effect immediately.

(4) Finality of orders. If there is no timely request for an adjudicative proceeding, then the order shall be final. An order contested in an adjudicative proceeding is final when that proceeding ends in a final order pursuant to the Administrative Procedure Act, or is otherwise dismissed. There shall be no collateral attack nor relitigation of any final order.

[Statutory Authority: RCW 75.08.080. 00-01-101 (Order 99-209), § 220-125-020, filed 12/16/99, effective 1/16/00.]

WAC 220-125-040 Content of order. An order of revocation or suspension shall include the information required by this section.

(1) A statement of material facts, such as the fact of conviction or other material facts set by statute or rule, and a statement of the legal authority that authorizes the order.

(2) A statement identifying what license, tag, or permit, or licensing privileges are revoked and/or suspended.

(3) A statement describing the beginning and end of the period of revocation and/or suspension.

(4) A statement describing rights to request an adjudicative proceeding to contest the order.

[Statutory Authority: RCW 75.08.080. 00-01-101 (Order 99-209), § 220-125-040, filed 12/16/99, effective 1/16/00.]

WAC 220-125-050 Adjudicative proceedings to contest an order of revocation or suspension. A person who is subject to an order of revocation or suspension shall have the rights provided by this section to request an adjudicative proceeding to contest the order. No person other than the recipient of the order or the recipient's legal representative shall have standing to request an adjudicative proceeding. The adjudicative proceeding shall be in compliance with provisions of the Administrative Procedure Act, except as modified by applicable rules of the department.

(1) Service by department. Service of the order by the department is valid if done in any of the following manners:

(a) Personal service on the recipient in the manner allowed by the civil rules for service of a complaint and summons;

(b) Service by mail to the last mailing address of a licensee; or

(c) Service by mail to the mailing address of a person convicted of a violation of chapter 77.15 RCW as shown by court records of the conviction.

When service is by mail, the date of service shall be shown on the department order as the date of department mailing, and may be proved by a certificate of mailing.

(2) Timing for request. An adjudicative proceeding to contest an order of revocation or suspension must be requested no later than twenty days from the date of service of the order. To be timely, the request must be physically received by the office of the director in Olympia, Washington, during normal business hours on or before the 20th day following the date of service of the order, except that if the

20th day falls on a Saturday, Sunday, or state holiday, then the request for hearing shall be timely if received on the next business day. The person requesting an adjudicative proceeding may prove that it was timely requested by obtaining a written receipt of service from the office of the director, or by providing an affidavit showing personal service on the office of the director, or by a United States mail return receipt requested service showing receipt by the department on or before the last day set by this rule.

(3) Manner and content of request. Each request for adjudicative proceeding shall substantially comply with this subsection.

(a) The request shall be in writing;

(b) The request shall identify the order that the person seeks to contest. This can be done by reference to the number of the order, by reference to the subject and date of the order, or by reference to a copy of the order attached to the request;

(c) The request shall state the grounds upon which the person contests the order. If the person contests the factual basis for the order, the person shall allege the facts that the person contends are relevant to the appeal; and

(d) The request shall identify the relief that the person seeks from the adjudicative proceeding by specifying whether the person asks to have the order vacated, or provisions of the order corrected.

[Statutory Authority: RCW 75.08.080. 00-01-101 (Order 99-209), § 220-125-050, filed 12/16/99, effective 1/16/00.]

WAC 220-125-060 Grounds for reversing or modifying an order of suspension or revocation. An adjudicative proceeding to review a department order of revocation or suspension shall reverse or modify an order only when the order was not authorized by law, or as otherwise provided in this section. Where an issue of fact is material to determining the validity of an order, then the department shall be required to prove the fact by a preponderance of evidence, except that a person contesting the order shall have the burden to prove any fact that is in the nature of an affirmative defense.

(1) Adjudicative proceedings to contest an order shall be limited to the following issues:

(a) Whether the person was in fact convicted of the relevant offenses or committed any conduct or actions that are material to the order;

(b) Whether the law authorizes the order of revocation or suspension of the particular license(s) or privilege(s);

(c) Whether the period of revocation or suspension is consistent with the period required or allowed by law; and

(d) Any other issue that the presiding officer determines is necessary to review of the order or review of the discretion exercised by the director.

(2) The presiding officer may, after appropriate conference with the person seeking review and a representative of the department, enter a prehearing order to identify the issues that will be reviewed at the adjudicative proceeding, and to set the time, place, and manner of the proceeding. A prehearing order shall control all future proceedings and issues shall not be raised except as allowed by that order, except when the presiding officer determines that there is good cause. If no prehearing order is entered, then the adjudicative proceeding may occur and review the grounds stated in the request at a time, place, and manner set by the presiding officer. When

(2005 Ed.)

there is no substantial prejudice to the appellant's ability to contest a department order, an adjudicative proceeding under this subsection may be conducted based on written submissions.

(3) Discovery and subpoenas. Discovery is not allowed except as provided in this rule. A party wishing to engage in discovery, or to compel the attendance of witnesses at the hearing or in discovery, must file a motion with the presiding officer to obtain permission. Such motion shall be served on all parties to the proceeding, and all parties shall have at least five days to respond to the motion before the presiding officer rules, unless the presiding officer shortens time for such a motion based upon a showing of good cause. In addition to the criteria set by RCW 34.05.446(3) for such motions, the moving party shall demonstrate that he or she has attempted in writing to seek a stipulation to the fact or facts that the person seeks to prove using discovery. The presiding officer has discretion to condition or deny discovery.

[Statutory Authority: RCW 75.08.080. 00-01-101 (Order 99-209), § 220-125-060, filed 12/16/99, effective 1/16/00.]

WAC 220-125-070 Orders upon adjudication. (1) The presiding officer shall enter findings, conclusions, and an order that affirms, modifies, or vacates the original order revoking or suspending. If the presiding officer enters an order that includes any period of revocation or suspension, then the order shall expressly state the beginning and ending period of any period of revocation or suspension, and shall identify the licenses or privileges that are revoked or suspended.

(2) If the revocation or suspension was imposed with a finding of immediate effect pursuant to WAC 220-125-020, then the period shall include such time that the person has been suspended or revoked under WAC 220-125-020. However, if the revocation or suspension did not take effect due to the initiation of the adjudicative proceeding, then the period of revocation or suspension shall begin on the twenty-first day after service of the final order and continue through the period set by statute or applicable rule.

[Statutory Authority: RCW 75.08.080. 00-01-101 (Order 99-209), § 220-125-070, filed 12/16/99, effective 1/16/00.]

WAC 220-125-080 Reinstatement. There shall be no reinstatement petitions authorized for any order of revocation or suspension except as provided by this section.

(1) A person under an indefinite order of suspension or an order that prohibits issuance of licenses for an indefinite period, based on statutes in existence prior to June 11, 1998, may petition the director for reinstatement of privileges by showing that:

(a) The person has complied with an analogous period of suspension that would be imposed under chapter 77.15 RCW; and

(b) The person has not been convicted of violating any fish or wildlife laws of the state of Washington, or any laws in Title 75 or 77 RCW, since the person was suspended or subject to an order prohibiting issuance of licenses to the person.

(2) Notwithstanding subsection (1) of this section, any such indefinite order issued by the former departments of

fisheries or game or wildlife, or fish and wildlife, shall expire after ten full years from the initial date of such order.

[Statutory Authority: RCW 75.08.080. 00-01-101 (Order 99-209), § 220-125-080, filed 12/16/99, effective 1/16/00.]

WAC 220-130-040 Review and selection process. (1)

The application method is on application forms provided by the department specifically for this purpose. Application forms will be available by request from the Olympia headquarters and at all regional offices of the department.

(2) Applications for projects will be accepted each year during the open application period of January 2 through March 31.

(a) Applications accepted prior to the start of a biennium may be for project funding for one or both years of the ensuing biennium.

(b) Applications accepted during the first year of a biennium will be for project funding in the second year of a biennium.

(3) The funding decision deadline is May 31 of the year of application.

(4) Exceptions to the funding deadline dates will only be allowed in the event of applications for volunteer projects which are responsive to an emergency situation which may arise and which has been declared to be an emergency by the director.

(5) The department will send each applicant, within forty-five days of receipt of each application, a written acknowledgment of the receipt of the application and give the applicant an estimated date when notification of acceptance or rejection of the proposal can be expected. The written acknowledgment will also provide the department's selection criteria and a general description of the review and selection process. Final decisions and notification of acceptance or rejection of proposals where funding is requested will be made only after the biennial budget is passed by the legislature and signed by the governor.

(6) The department will determine when a proposed project might affect the management programs of federal, other state, and local agencies and of treaty tribes and will make contact with these entities, when the department determines that it is appropriate to do so, during the review and selection process. If the department determines that ongoing coordination between a volunteer group and another agency or tribe would be appropriate, it may be required as a condition of the agreement, when issued.

(7) The department may provide suggested modifications to the proposal which would increase its likelihood of approval together with the name and telephone number of the person within the department responsible for monitoring the review of the proposal.

[Statutory Authority: RCW 77.12.047, 04-01-055 (Order 03-306), § 220-130-040, filed 12/11/03, effective 1/11/04. WAC 220-130-050 Criteria used in selecting cooperative projects. The following criteria will be considered by the department in ranking project proposals for funding. These criteria are not rigid but are intended to guide the department in selecting projects that are feasible, cost-effective and complementary with other department programs.

(1) Fish and wildlife commission policies will be used, along with other criteria, to rank proposals. Applicants may

(2005 Ed.)

wish to compare the objectives of their proposals with the most recent statement of goals, policies and objectives of the fish and wildlife commission to determine whether they are consistent or in conflict.

(2) Program goals, objectives and priorities. Projects will be ranked according to their adherence to program goals, objectives and priorities as outlined in department plans. Applicants may wish to call the operating division(s) within the department most directly concerned with the subject of their proposal to determine whether they are consistent or in conflict.

(3) Costs versus benefits. Project proposals will be evaluated and ranked according to expected ratio of costs to public benefits. Costs will include both grant funds and other funds required, the level of department provided staff assistance needed and the amount for continuing operation and maintenance support needed. Benefits may include direct benefits to fish and wildlife or habitat and benefits to the public in terms of increased recreational or commercial opportunities or increased knowledge about fish and wildlife.

(4) Educational value. Consideration will be given to a project's value in educating and informing the public about the life history and needs of fish and wildlife.

(5) Capabilities of volunteer groups. When considering the approval of a new project, or the renewal or refunding of an existing project, the relative success of that project and the overall capabilities of a particular volunteer group in managing cooperative projects and producing results will be considered, including the amount of department supervision and assistance required to accomplish the project.

(6) Project types. The department shall encourage and support the development and operation of cooperative projects of the following types:

(a) Cooperative food fish and game fish enhancement projects.

(b) Cooperative fish and wildlife habitat improvement projects.

(c) Cooperative fish or wildlife research projects.

(d) Cooperative game bird and game animal projects.

(e) Cooperative information and education projects.

(f) Cooperative nongame wildlife projects.

(g) Cooperative shellfish projects.

WAC 220-130-060 Acceptance or rejection of proposals. (1) The terms and conditions for an acceptable project will be set forth in a written contract between the department and the volunteer group and provide specifics for project implementation. Agreements may be for up to five years.

(2) Each approved agreement will include the following, when determined by the department to be necessary or appropriate:

(a) Permit to release fish or wildlife.

(b) Procedures for applying for a hydraulic project approval (HPA).

(c) Description of methods that will be used to provide the volunteer group with fish, eggs, wildlife, fish food or other available supplies which will be obtained from the department.

(3) If a proposal is rejected, the department must provide in writing to the volunteer group the reasons for the rejection. The volunteer group may appeal any decision rejecting a proposal to the director or the director's designee.

(4) Proposals accepted by the department may not commence until the volunteer group has executed a contract to undertake the project and that contract has been signed by the person within the department with the authority to do so. Any funds expended prior to the acceptance of a cooperative project contract, or orders for supplies or other action by the volunteer group after the completion date which would constitute a financial obligation will be considered the responsibility of the volunteer group.

[Statutory Authority: RCW 75.08.080 and 75.52.050. 99-11-004 (Order 99-44), § 220-130-060, filed 5/6/99, effective 6/6/99. Statutory Authority: RCW 75.08.080. 85-04-045 (Order 85-07), § 220-130-060, filed 2/1/85.]

WAC 220-130-070 Termination or revocation of agreements. (1) The department may revoke approval and terminate agreements for cause. Grounds for termination include:

- (a) Violation of the agreement provisions.
- (b) The development of unacceptable biological or resource management conflicts.
- (c) The unavailability of adequate financial or biological resources to continue participation by the department.
- (d) If any fish or wildlife laws or regulations have been violated.

(2) Notice of revocation shall be mailed to the contact person for the volunteer group stating the reason for the revocation and, should the reason be violation of the agreement provisions, specifying what agreement provisions were violated and how corrective action may be taken to continue the project.

(3) The volunteer group may appeal any decision for agreement revocation or project termination to the director or the director's designee.

[Statutory Authority: RCW 75.08.080 and 75.52.050. 99-11-004 (Order 99-44), § 220-130-070, filed 5/6/99, effective 6/6/99. WAC 220-130-080 Project recovery of reimbursable expenses. Cooperative projects which rear salmon have the potential for generating income from the sale of surplus salmon carcasses and eggs derived from fishes produced at those projects, and to which salmon return to spawn at the end of their life cycle. If the department determines that it is appropriate to do so, such cooperative projects may, under the guidance of the department and by administrative rules and guidelines established for this purpose, recover some of the cooperative projects operating costs through the sale of nonviable salmon eggs and carcasses. It is understood that the primary objective of this provision is not to establish projects which constitute fish farms, but to allow those projects which may generate surplus fish which elude sport, commercial or tribal fisheries to sell the resulting surplus to help defray the cost of the particular cooperative project.

(1) In order for a project to recover reimbursable expenses, the project must have an annual budget presubmit-

ted and approved by the department. The budget must generally show expected expenses, including the names of all persons expected to draw salaries as hired labor.

(2) Under administrative rules developed for this purpose, the cooperative project may sell nonviable salmon eggs and carcasses by soliciting competitive bids from approved buyers, as determined by the department.

(3) Volunteer cooperative project surplus salmon eggs shall be sold as prescribed by chapter 220-74 WAC, Surplus salmon eggs.

(4) All moneys generated by such sales shall be paid to the department and placed into a special account used solely to fund the reimbursable expenses of the cooperative project which generated the funds.

(5) In order to utilize the funds generated by such sales, a cooperative project must submit a list of expenses accompanied by original invoices, including signed time sheets for hired labor salary expenses, which clearly shows that the expenses relate to the presubmitted budget for the project which comply with all accounting and contract requirements.

(6) Reimbursable expenses shall be limited to the actual annual operating expenses of the project. No profit may be realized by the project, and no moneys shall apply to amortization or depreciation.

(7) Viable surplus salmon eggs may not be sold, bartered, exchanged or disposed of by any volunteer group.

(8) Surplus salmon carcass sales may not be allowed if the department determines that they would be more appropriately utilized to reseed streams in an effort to restore or enhance habitat through nutrient enrichment.
